BUSINESS INVENTORIES SINCE 1952

The following discussion deals mainly with the behaviour of inventories on an aggregative basis and within the framework of the National Accounts.¹ It isolates certain similarities in the timing and amplitude of inventory movements and highlights some of the movements during the two business recessions in 1953-1954 and 1957-1958.

Although the level of business inventories is affected by a number of variables, a good deal of uniformity in patterns of behaviour can be observed when figures are examined at the total level. It should be remembered that inventories serve as a link between production and final demand and changes in them may come about through a positive decision to increase or reduce them, that is, the change may be voluntary, or through sudden and unanticipated shifts in production or final demand, that is, the change may be involuntary. There is nothing in the statistics themselves which will identify these two types of change. Therefore, although changes in inventories may show repetitive patterns of behaviour over time, it will not always be possible to explain adequately the reason for such movements on the basis of existing data.

The article deals with non-farm business inventories only and all data have been adjusted to remove purely seasonal influences.

The main economic developments of the period are reviewed briefly in order to establish a setting for more detailed examination of inventory behaviour.

By 1952, the strong inflationary pressures initiated by the outbreak of war in Korea in mid-1950 had begun to subside, and a general downturn

in prices developed. The rate of accumulation of inventories was much reduced, leaving almost all the increase in national production available to meet rising final demand. New peaks in production, consumption and employment were reached in 1953. However, the decline in defence expenditures in the United States following the Korean Armistice in mid-1953 introduced recessionary influences and inventory movements contributed to the decline in economic activity. In Canada in 1954 business expenditures for plant and equipment fell and a broad corrective movement occurred in inventories.

Expansion was resumed in 1955 and continued in 1956 when investment in fixed capital and in inventories were both strikingly large. In 1957 economic activity levelled off and by the end of the year inventories were being liquidated. During the course of 1958, economic activity returned to its upward course and by the end of the year inventories were being accumulated on a modest scale and thus contributing support to current production.

Movements in Inventories and in Gross National Product

Inventories and total output have both moved up during the period reviewed here but inventories have increased much less than Gross National Product. There appears to have been a secular down-trend in the ratio of stocks to Gross National Product, as is illustrated in Chart 1. This trend was interrupted in 1953-1954 and in 1957-1958. Before going on to consider the cyclical pattern of the ratio, it is interesting to consider possible explanations of the apparent secular trend.

The explanation may lie in an increase in the relative importance of industries having low inventory-output ratios or it may lie in a general reduction of inventory output-ratios in component industries. Shifts in weighting in the direction of industries having low inventory-output ratios have in fact occurred. Gross domestic product at factor cost by industry since 1947 indicates that such industries as finance, insurance and real estate, mining, construction, and public administration have gained in relative importance and this group normally has a low ratio of inventory to output. Manufacturing and trade, where the ratios are normally high, have not changed in relative importance.

During the seven-year period under review, Gross National Product increased almost 50 per cent and inventory holdings only 25 per cent. It is in-

¹ Gross National Expenditure is measured in terms of expenditures made at current prices by consumers, business investors, government and foreign buyers, from which are deducted expenditures on imported goods and services, and the aggregate measuring national production is arrived at by adding or subtracting the changes in inventories.

The measurement of the change in inventories must be consistent with the measurement of other items on the expenditure side, that is physical units must be measured at current prices. This requirement calls for some adjustment of the figures of book value of inventories initially obtained from accounting records. Because of the method of accounting used by business firms, such figures do not record changes in inventories in terms of current prices. If, for example, the first in first out method is used, the goods charged out of inventory reflect some prior period prices. In order to measure the change in inventories for Gross National Product purposes, an inventory valuation adjustment is introduced which has the effect of valuing the change in inventories in terms of prices of the current period.

CHART-1

interesting to note the difference in the timing of the movements of the two series. As is apparent in Chart II, most of the increase in inventories was concentrated in the two-year period from mid-1955 to mid-1957, when four-fifths of the total increase took place. In the case of Gross National Product, the movement is much more extended in time and in the two-year period just mentioned only two-fifths of the increase in Gross National Product

took place. This pattern reflects the fact that the two minor cycles in business activity in the period under review, total stocks have been affected much more than total output. In the 1957-1958 recession, it took Gross National Product only three quarters to regain its previous peak whereas stocks were still not yet ahead of their previous high even after six quarters had elapsed. A similar pattern was apparent in the earlier recession.

CHART-2

In recent Canadian experience, changes in stocks have tended to lag behind changes in output and this lag is particularly noticeable in the early phases of recovery from recession. The upturn in inventories in both periods did not occur until four quarters after Gross National Product had begun to

rise. The timing and the amplitude of stock movements in both recessions is illustrated in Chart III. This chart is in index form with total stocks at the peak of Gross National Product equal to 100 and the movements are traced through the trough of Gross National Product and several quarters of the re-

every phase. It is apparent that the stock movements in the 1957-1958 recession were more pronounced than in 1953-1954, moving down by almost 3 percentage points against a movement of just less than 2 percentage points in the earlier period. In both recessions stocks continued to be liquidated well after the recovery phase commenced. Stock peaks coincided with those of Gross National Product on both occasions and then held almost flat or one quarter while Gross National Product dipped to its trough. Subsequently, when Gross National Product was in its recovery phase, stocks were liquidated sharply for two quarters, flattened out in the third and registered their first rise four quarters after the trough in Gross National Product. These timing patterns suggest that inventories tend to hold level for a brief time after the peak in output is reached but that liquidation continues for a considerable time after recovery is under way. It may be noted that in both cycles inventory investment reached its maximum in advance of the peak in business activity.

It is interesting to note that in both recessions the trough in Gross National Product occurred one quarter after the peak. On both occasions, as is illustrated in the chart, the ratio of stocks to Gross National Product continued to rise for one quarter after the peak in Gross National Product had been reached and then fell sharply. These sharply falling ratios following the trough are the outcome of recovery in output on the one hand and declining inventories on the other. It may be noted that the progress of recovery from the recent recession has brought the ratio of stocks to output to the lowest level since 1947.

It is not intended to suggest that the pattern of timing, observed in the two recent recessions and described above is a basis for generalizations about inventory behaviour. It may be related to the fact that both recessions were mild and short-lived.

Changes in Investment in Inventories

The importance of inventory investment or disinvestment in the period under review is demonstrated by the fact that changes in this component were equal to half the changes in Gross National Product, ignoring signs in both cases. Also, an examination of the two series indicates that changes in inventories tend to conform to changes in Gross National Product with a one or two quarter lag. For example, if changes in inventories are moved forward two quarters in the period when total output is increasing toward the peak at a slackening rate, and moved forward one quarter in the period when total output is rising from the trough at an accelerating rate, the two series of changes show a high degree of correlation. This is illustrated in Chart IV. The

CHART - 3

time period is divided into four segments and the timing of peaks and troughs in the two recessions is indicated. The first and third segments illustrate the situation in which Gross National Product is rising at a slackening rate and changes in investment in inventories are moved forward two quarters. The other two segments illustrate the situation in which Gross National Product is rising at an accelerating rate and changes in investment in inventories are moved forward one quarter.

Patterns of Investment in Durables and Non-Durables

The analysis in the following paragraphs is limited to three industries, manufacturing, wholesale and retail trade since adequate data on a quarterly basis are not available for the other industries whose investment in stocks goes to make up the total included in the National Accounts. In terms of total book value of inventories, the three industries dealt with are estimated to represent over three-quarters of non-farm business inventories. Special attention is given to the behaviour of durables and non-durables.

Investment in durable goods inventories showed wide fluctuations in this period and this volatility was more marked after 1954. The pattern of behaviour of durables and non-durables is shown in Chart V. Whereas the demand for non-durables tends

to be relatively stable, demand for durables is subject to sharp and sudden shifts. The relation of durables to fixed investment, which is characteristically unstable, is an obvious one. Since purchases of consumer durables are so readily post-

ponable, consumer attitudes and expectations, as well as changes in income, are quick to find expression in the consumer sector of the market for durable goods. Consumer purchases of non-durables display much less volatility.

CHART-4

CHART-5

It is not possible to show total final purchases of goods classified into durables and non-durables but this information is available for the consumer sector. The points made above are illustrated in Chart VI which shows the quarter to quarter changes

in consumer expenditure on durables and non-durables. U.S. experience shows that this pattern is general in other areas of demand for durables, that is, producers' durables, Government purchases of durables and exports of durables.

CHART - 6

The durable goods display an overall pattern of inventory investment which coincides fairly closely with that of the general level of economic activity over the period. Durable goods stocks generally mounted through the period 1952-1953. In the last quarter of 1953 and in step with business recession, a slight liquidation of stocks took place. While inventory investment rose sharply in the first quarter of 1954, reflecting a sizeable accumulation in the electrical apparatus and supplies and iron and steel products industries, this temporary accumulation was in all probability involuntary. From mid-1954 to mid-1955 stocks of durable goods were being reduced, at first to keep stocks in balance with lower levels of production and consumption and, later, as the recovery got under way, to meet expanding final demand prior to production moving into high gear. Curtailed business spending on machinery and equipment and lower purchases by consumers of durable goods were two factors creating the desire to curtail inventories in the initial phase of this movement.

Beginning in mid-1955 and until mid-1957, stocks of durable goods continued to increase. The build-up was dampened at first by the rapid rate of increase of final sales. Demands for construction goods, machinery and equipment and consumer durables were all heavy. A large part of the big increase in imports in this period consisted of industrial machinery, primary iron and steel and aircraft and automobile parts. In spite of the rapid build-up of stocks of durables in 1956 the ratio of stocks to sales or shipments in retail trade and manufacturing (the only industries for which these

ratios are available) remained well below the average for the whole period. With prices rising somewhat during 1955-1956 and shortages in prospect for such commodities as steel and building materials, part of the accumulation in these industries may have been defensive.

The rate of accumulation of durable goods stocks fell steeply at the beginning of 1957 and by the third quarter durable goods on hand were being reduced. The liquidation of inventories in the first quarter of 1958 was the sharpest experienced in post-war years and it continued through the second and third quarters. The reduction in durable stocks took place against a background of generally reduced demand for producers' durable equipment, stable personal expenditure on consumer durables, and sharply falling new orders. Furthermore, it was associated with excess capacity in many industries which meant that businessmen were able to obtain delivery on short notice, thus obviating the need to carry large stocks. By the fourth quarter, liquidation had ceased and a substantial accumulation took place in the first quarter of 1959 in a situation of rising retail and wholesale sales and manufacturers' shipments.

Investment in inventories of non-durables tended to follow a broadly similar pattern for most of the period but with less pronounced fluctuations. However, durables and non-durables ran counter to one another during the 1953-1954 recession. Investment in inventories of non-durables rose in that period, which may reflect the continued strength of consumer demand in contrast to the weakening demand for capital goods and exports.

INDUSTRIAL PRODUCTION

In May, the seasonally adjusted index of industrial production fell slightly under the impact of a decline in durable manufacturing output. Electricity and gas recorded a slightly lower level of production. Small gains were posted in non-durable manufacturing and mining components. Transportation equipment and iron and steel confirmed a downward movement in total durables while electrical apparatus moved up.

⁽¹⁾Averages of unadjusted data.⁽²⁾Employment indexes and average hours worked are compiled from data which relate to the last pay period of the month.⁽³⁾Percentage seasonally adjusted.⁽⁴⁾Revisions in the raw data for November, 1957 through June, 1958 are not incorporated in this series.

RETAIL TRADE

Total seasonally adjusted retail trade moved up abruptly in May under the influence of sharp increments in grocery and combination stores, motor vehicle dealers and clothing store sales. Department store sales bounced back up to the level established in the first quarter.

HOUSING STARTS AND COMPLETIONS

In June, housing starts in municipalities of 5,000 and over have exhibited little change from the May level. Completions remained high reflecting the large number of starts in late 1958 and early 1959.

⁽¹⁾Averages or totals of unadjusted data.⁽²⁾Seasonally adjusted at annual rates.⁽³⁾Three-term moving average of seasonally adjusted data.

*Seasonal adjustment computed by Central Mortgage and Housing Corporation.

EXPORTS AND IMPORTS AND CORPORATION PROFITS

Seasonally adjusted exports climbed rapidly in June with most of the strength coming from agricultural and metal products. March and April seasonally adjusted imports exceeded their previous months level. First quarter seasonally adjusted corporation profits fell marginally from their high fourth quarter level.

(1) Annual estimates are as of June 1. (2) Seasonally adjusted at annual rates. (3) Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period. (4) Rough cords of 128 cu. ft. (5) In urban areas of 5,000 population and over. (6) Average of weekly rates. (7) Middle of month. (8) Revised according to new bench marks. (9) This total includes all generating agencies producing over ten million kilowatt hours per year. (10) End of period. Including personal savings deposits.

(1) "De facto" population. Annual data are for June. (2) At current market prices. Annual data are totals of the four quarters. (3) Output of building and civil engineering work excluding the output of building operatives employed by private firms outside the building and civil engineering industries. (4) All manufactured products other than food, fuel and tobacco. (5) Exchange Equalisation Account holdings of gold and convertible currencies. Gold is valued at 250 s. per ounce fine, and currencies at parity, except the Canadian dollar which is valued at the appropriate rates.

4 Note.—Until the end of 1957, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1958 and 1959 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

⁽¹⁾Not applicable to figures on population and immigration.

⁽²⁾Yukon and North-West Territories not included in figures for births, marriages and deaths.

⁽³⁾Estimates are given by years as of June 1 and by quarters for Canada. ⁽⁴⁾Exclusive of stillbirths. ⁽⁵⁾Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

NOTE: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1926-1958", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

Revised quarterly data for the historical period 1947-1955 are still in course of being re-worked. This material will be released as soon as possible.

Table 5.—NATIONAL ACCOUNTS: Income and Expenditure—concluded

YEARS AND QUARTERS

SOURCES OF PERSONAL INCOME									
	Salaries, Wages and Supple- mentary Labour Income	Deduct: Employer and Employee Contributions to Social Insurance and Gov't. Pension Funds	Military Pay and Allow- ances	Net Income Received by Farm Operators from Farm Production ⁽¹⁾	Net Income of Non-Farm Unin- corporated Business	Interest, Dividends and Net Rental Income of Persons	Transfer Payments to Persons		
							From Government (excluding Interest)	Charitable Contri- butions by Corporations	Per- sonal In- come ⁽²⁾

⁽¹⁾The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item.

⁽²⁾Includes adjusting entry.

⁽³⁾Includes residual error of estimate.

⁽⁴⁾This item differs from column 5, bottom of page 6, in that it excludes

undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board.

Note: For a detailed description of concepts, sources and methods see D.B.S. Reference Paper (61-502) "Revised Index of Industrial Production, 1935-57."

⁽¹⁾The M.C.D. measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. For a fuller description see D.B.S. Reference Paper (61-502).

Data refer to hourly rated wage earners of firms customarily employing 15 persons or more as reported at the first of the month.

* Formerly these average hours were ascribed to the first of the following month.

⁽¹⁾As of July, 1957, the statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes.⁽²⁾The annual and monthly "all industries" totals for 1957 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote (1).

⁽¹⁾Excludes gold.⁽²⁾Arithmetically converted from 1935-39=100.⁽³⁾Indexes final only to July 1958. For crop year August, 1957-July, 1958 indexes revised

to include final payments for western wheat.

⁽⁴⁾Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1958 are final prices.

Since August 1, 1958, only initial prices are available for wheat, oats and barley.

⁽¹⁾Includes copper fine in ore, ingots, bars, billets, rods, strips, sheets and tubing.⁽¹⁾Includes ingots, bars and billets.⁽¹⁾Includes nickel in matte

or speiss, oxide and fine.

⁽¹⁾Includes lead in ore and in pigs.

⁽¹⁾In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values.

⁽²⁾Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlogs.

⁽³⁾Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys.

⁽⁴⁾Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period.

⁽¹⁾Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. ⁽²⁾Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ⁽³⁾Customs exports. ⁽⁴⁾Mill shipments destined for export.

Source: Monthly Report on Primary Iron and Steel, D.B.S.

Note.—Effective January, 1957, the data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included. On this account totals shown are not comparable with those of previous years.

⁽¹⁾Shipments for further processing within own firm and for sale in Canada. ⁽²⁾Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

⁽¹⁾End of period.⁽²⁾Does not include apartment-type machines.⁽³⁾Electric and other.⁽⁴⁾Gas types are included.⁽⁵⁾In some cases

these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. Source: Monthly Reports, Domestic Electric Refrigerators, Domestic Washing Machines, Trade of Canada, and Radio and Television Receiving Sets, D.B.S.

*Construction of dwelling units.

Note.—These data are the results of a nation-wide survey carried out by the Bureau of Statistics with the co-operation of the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more are enumerated completely. Approximately 800 sample areas lying outside these municipalities were also chosen for complete enumeration.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1957 and 1958 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. ⁽¹⁾Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. Source: Building Permits, Business Finance Division, D.B.S.

⁽¹⁾The coverage was extended to 507 municipalities in 1948, and as of 1959, stands at 1,014, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

⁽¹⁾Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. ⁽²⁾Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. ⁽³⁾Annual data are monthly averages of crop year. ⁽⁴⁾Includes eggs for hatching.

* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available.

⁽¹⁾Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. ⁽²⁾Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. ⁽³⁾Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only. ⁽⁴⁾In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards.

Balances were as follows:

June 1957-28

Sept. 1957-34

Dec. 1957-32

Mar. 1958-29

June 1958-31

Sept. 1958-39

Dec. 1958-35

⁽⁵⁾Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. ⁽⁶⁾Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

⁽¹⁾Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1957 and 1958 differ from the sum of the monthly data due to revisions which cannot be allocated by months. Beginning in January, 1957, all railways follow the uniform classification of accounts, and the statistics previously shown in the "Other Railways" section in the upper half of the table are combined with those railways already following the new system. ⁽²⁾As of January, 1958, statistics include the British Columbia Electric Railway. ⁽³⁾As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system.

⁽¹⁾Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. ⁽²⁾The September 30, 1957 and subsequent figures for 'personal savings deposits' exclude, and the figures for 'other notice deposits' include, the amount of \$140 million, being the deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes, which were reclassified at that time in the returns of the banks to the Department of Finance. The figures prior to September 30, 1957 are thus not comparable with those since that date. ⁽³⁾Mainly deposits of foreign banks. ⁽⁴⁾Capital, rest fund and undivided profits as at the latest fiscal year-end. ⁽⁵⁾Including issues payable in foreign currency. ⁽⁶⁾Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. ⁽⁷⁾Excluding Canadian day to day loans. ⁽⁸⁾Loans to grain dealers and exporters. ⁽⁹⁾Loans to finance purchase of Canada Savings Bonds at time of issue. ⁽¹⁰⁾Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. ⁽¹¹⁾Including loans to instalment finance companies.

⁽¹⁾Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks.

by Bank of Canada and chartered banks in Canada.

⁽²⁾Less total float, i.e. cheques and other items in transit (net).⁽³⁾At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about \$140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date.⁽⁴⁾Subsidiary coin issued by the Mint less coin held

Note.—This series gives total new settled for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

⁽¹⁾The Canada totals by months for 1957 and 1958 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. The provincial monthly averages for 1957 have been revised to agree with the Canada total, but the provincial monthly figures have not. Neither the monthly averages nor the monthly figures for 1958 have been revised to agree with the Canada total.

⁽¹⁾Ordinary, Industrial and Group. ⁽²⁾Part of the apparent increase between 1957 and 1958 is due to a change in the "inflation" factors used to bring figures of reporting firms up to the estimated total level for all insurance companies. Source: The Canadian Life Insurance Officers Association.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction. Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

(2) Includes, in addition to the industries listed, Tobacco.
(3) Includes Printing and Publishing and Allied Industries.

CANADA 1959

(English Edition)

Now Available

MORE THAN 300 PAGES
OVER 200 ILLUSTRATIONS
MANY IN COLOUR

\$1 A COPY

The 1959 edition of this popular official Handbook contains a vivid picture of Canada today. In it the reader will find . . .

- . . . a historical sketch of the settlement and growth of Canada during the 200 years since the Battle of the Plains of Abraham, and a brief description of the forces which shaped Canadian Confederation . . .
- . . . an up-to-date portrayal of the Canadian economy and of the political, social and cultural development of the Canadian people . . .
- . . . illustrated articles on the nation's abundant natural heritage — its forest, agriculture, fishery and mining industries — its broadly-based industrial development, keyed to rich energy resources — the significance, magnitude and composition of Canada's international trade — its diverse facilities of transportation and commerce — and its social, educational and cultural life.

CANADA 1959 was prepared by the Information Services Division of the Dominion Bureau of Statistics. Orders must be paid in advance by postal money order or certified cheque made to the order of the Receiver General of Canada and addressed to the Queen's Printer, Ottawa.

CHANGES IN LABOUR INCOME SINCE 1926

The purpose of the present article is to review historical trends in labour income, as presented in a forthcoming publication covering the period 1926 to 1958. Glancing briefly at the entire period, there were significant advances in the late 1920's, followed by a severe decline during the depression of the early 1930's. Then came a period of faltering and incomplete recovery, followed by a more rapid rise as the economy reacted to the shock of war-time mobilization. Although levels of labour income have been affected in the post-war period by three comparatively short periods of hesitation or recession, annual totals have moved successively higher ever since 1933. Other major economic indicators have shown a broadly similar pattern of behaviour over time.

The growth of the labour force is of course an important element in the rise in labour income from 1926 to 1958 but the trend toward industrialization also contributed in that a larger proportion of the working population moved into the "paid worker" category. The growth of the labour force was, however, accompanied by a considerable reduction in hours of work; the progress of technology made it possible to achieve both higher real output and more leisure. The sharp rise in labour income in the latter half of the period also reflects the fairly persistent inflationary pressures which have raised the economy to new high levels of wages and prices.

Payments to labour totalled about \$2.4 billion in 1926, the first year of the historical series. Annual increases in employment and wage rates had raised this figure by 1929 to a pre-war peak of \$2.9 billion, but in the next year the series showed the influence of deepening depression. In each of the three years after 1929, the situation deteriorated, and by the middle of 1933 about 19 per cent of the available labour force was unable to find work. Average wage rates as well as employment levels moved lower, and accordingly, labour income fell to \$1.8 billion in 1933, or roughly three-fifths of the 1929 level.

The impact of the depression was general, and payrolls were reduced drastically in all industries. Construction was hardest hit, the wage bill dropping by 1933 to a little more than a fifth of the 1929 figure. Forestry and agriculture experienced declines of about two-thirds and one-half, respectively, and mining of about two-fifths, so that the primary products group as a whole (a tenth of total labour income in 1929) fell by approximately 50 per cent. Firms engaged in manufacturing, which were responsible in 1929 for a little over a quarter of all labour payments, had experienced a 44 per cent cut-back

in payrolls by 1933. In transportation, which was of course seriously affected by reductions in shipments of both primary and manufactured goods, labour income declined by more than 40 per cent. Other industries, including government, trade, communication, public utilities, finance, and some service groups, experienced payroll decreases which were relatively smaller, though nevertheless substantial.

Economic recovery had commenced by 1934. Output had begun to rise again and, concomitantly, labour income started to increase slowly. From an aggregate figure of \$1.8 billion in 1933, the national wage bill advanced to \$1.9 billion in 1934, and then to \$2.1 and \$2.2 billion in 1935 and 1936. By 1937 the figure had reached \$2.5 billion, still substantially lower than in 1929. Payrolls in construction had increased but were well below pre-depression levels, and the same was true of the transportation industry. The 1937 manufacturing wage bill was approximately the same as the 1928 figure but still substantially below that of 1929. At a little over 400 thousand, the number of persons without jobs and seeking work at mid-year had declined markedly from the 1933 peak of about 825 thousand but nevertheless represented 9.1 per cent of the available labour force (the comparable percentages for 1929 and 1933 were 2.9 and 19.3 respectively). Then, in 1938, the upward climb was temporarily halted. The number of persons without jobs at mid-year increased to about 520 thousand and the Gross National Product failed to advance significantly above the level of the previous year, in either value or volume terms. Similarly, the aggregate of payments to labour was about the same as the year before. In 1939, output and income resumed their upward courses, but elements of weakness were still present. The number of persons without jobs and seeking work was roughly the same as in 1938. At \$2.6 billion labour income had failed by the end of the 1930's to reach the dollar level attained a decade earlier, and it was not until the following year, when the transition to a war-time economy had commenced, that the 1929 figure was surpassed.

Prices had fallen rapidly at the beginning of the depression. With the gradual improvement in the economic situation after 1933, they had risen gradually but by 1939 were still far below the 1929 level. The consumer price index (1949 = 100) was 76 at the end of the 'twenties and only 63 at the end of the 'thirties. On this basis, then, although the 1939 labour income total was lower than the 1929 total in actual dollar terms, in terms of purchasing power it was somewhat higher, i.e. wages and salaries represented command over a larger volume of consumer goods, in the aggregate.

During 1940 the economic effects of war-time mobilization were becoming apparent but the full impact of the diversion of productive resources to military requirements was yet to be felt. From about 9 thousand in 1939 (mid-year), armed forces personnel increased to more than 100 thousand in 1940. By 1942 the figure was approaching 400 thousand and by 1944 it had reached a peak of about 780 thousand. Part of the total, of course, consisted of persons who in peace-time would have been enrolled in educational institutions, or otherwise occupied outside the Canadian working force, but the largest part represented a withdrawal from the supply of labour available for civilian employment. As a substantial offset to this, on addition to the working force was provided by housewives, retired persons, and others who normally would have remained outside the economically active population. As a result the civilian labour force was relatively constant in size despite the heavy drain placed on it by military recruitment. However, shifts occurred between the self-employed and paid-worker groups, reflecting the augmented demand for factory products. The paid-worker component of the labour force increased rapidly from 2.2 million in 1940 to 2.6 million in 1941 and by 1944 had reached a war-time peak of almost 3 million, the bulk of the increase taking place in manufacturing. As would be expected under such conditions, the high level of unemployment inherited from the 'thirties dwindled rapidly. From 530 thousand at mid-1939, the number of persons without jobs and looking for work fell to 423 thousand in 1940 and to around 200 thousand in 1941. By 1943 it had dropped to about 75 thousand, or less than two per cent of the civilian labour force.

War-time developments in the labour market were reflected, of course, in the behaviour of the aggregate civilian wage bill. From \$2.6 billion in 1939 the total advanced to a little less than \$3.0 billion in the first full year of the war. Then, in association with the increasing volume of paid-worker employment and the prevalence of overtime work, it rose sharply in 1941 to a figure of \$3.6 billion, and again in 1942 and 1943, reaching a level of \$4.8 billion in the latter year. After 1943 the advances were moderate, and a total of \$5.0 billion was recorded in 1945. The bulk of the 1940-45 expansion of labour income occurred in manufacturing. In fact, by the end of the war manufacturing firms had almost tripled their 1939 payroll. Transportation, which of course played a vital role in the war-time economy, had roughly doubled its wage bill by 1945.

¹ About 100 million dollars of the 1949 total is attributable to the inclusion, for the first time, of Newfoundland.

The termination of hostilities and the ensuing reductions in military forces released large numbers of persons for entry into the civilian labour force. A good deal of doubt was expressed as to whether the economy would be able to absorb these influential workers at a time when government demand for goods and services was being sharply curtailed. However, the drop which occurred in the physical volume of output during the transitional period was relatively small, and the number of persons seeking but unable to find work rose only moderately in spite of the sharp increase in the labour supply. Wage rates, which had climbed rapidly in the early part of the war but had been rising since 1943 at a more gradual pace, now started to move up quickly. The over-all result was that the nation's wage bill increased in 1946 by \$450 million, and then rose in each of the next two years by roughly a billion dollars per annum, bringing it to a level of \$7.4 billion in 1948. In the final year of the 'forties it had reached \$8 billion or about two and two-thirds times the pre-war peak figure of 1929.¹ This notable increase in two decades, all of which had occurred since 1939, and the largest part since the end of the war, was the result of roughly a doubling of wage rates and an increase of about two-thirds in the number of paid workers.

Higher money wage rates were offset in part by the higher prices of consumer goods. By 1945 the consumer price index, which had fallen sharply during the depression, had risen again until it was at approximately the 1929 level. With the progressive removal of war-time price controls, the index rose moderately in 1946, and then more rapidly in 1947. In 1948 it moved upwards very sharply, recording a 14.4 per cent increase over the previous year. An additional small advance in 1949 brought it to a position which was higher than the 1929 and 1945 level by about 33 per cent. Nevertheless, the measure of changes in aggregate real wages and salaries, obtained by dividing labour income (excluding supplementary forms of payment) by the consumer price index, showed a gain of about 92 per cent since 1939, and of roughly 100 per cent since 1929. Paid workers had increased less rapidly over the same periods, and substantial gains in per capita real income were implied.

The period including 1949 and the first part of 1950 witnessed some relaxation of inflationary pressures and some hesitation in the expansion of economic activity. Prices and wage rates were still climbing but at reduced rates, and as the labour force continued to grow, the number of persons without jobs rose a little. Nevertheless, the notional wage bill increased by about \$500 million in 1949 (excluding Newfoundland), and by another \$600 million in 1950, to a total of \$8.6 billion. Then, with the fillip provided by the outbreak of hostilities

in Korea, inflationary tendencies again appeared. Wage rates advanced very rapidly between 1950 and 1951, and then increased more moderately in 1952 and 1953. Labour income rose by about \$1.5 billion from 1950 to 1951, and increases of roughly a billion dollars in each of the next two years brought the total to \$12.1 billion by 1953.

In 1954, evidence of a recessionary movement showed in annual statistics for the first time in the post-war period. The physical volume of national output declined for the first time since World War II, and, in spite of a relatively small increment to the labour force, the number of persons without jobs and seeking work increased markedly to an annual average of about 230 thousand. However, in spite of a drop in employment, increases in wage rates were sufficient to push labour income up to \$12.5 billion. The 1953-54 increase of \$300 million, though, was the most modest in almost a decade.

By the following year employment had started to rise again and wage rates continued to climb. The national wage bill rose by \$0.8 billion in 1955 and by \$1.7 billion in 1956, with employment and wage rates moving up rapidly.

A level of almost \$16.0 billion was achieved in 1957, although it was evident in the latter part of the year that the Canadian economy was entering the second post-war period of reduced activity. While annual estimates for that year show a further pronounced gain in labour income (\$1.1 billion) over 1956, the seasonally adjusted monthly figures show a declining trend from August of 1957 to February of 1958. These declines in labour income occurred in a period in which other major indicators such as the index of industrial production and the composite index of employment were also showing declines, and in which the number of persons without jobs and seeking work as a percentage of the total labour force was rising to a post-war record.

During the course of 1958, labour income resumed its upward trend though the upswing was marked by some unevenness reflecting the rather hesitant recovery in economic activity in the early part of that year. By year-end the economic recovery was gaining momentum and the upward trend of labour income in this period and through 1959 has been more pronounced as rising employment has reinforced wage rate increases and changes in average hours worked per week.

INDUSTRIAL PRODUCTION

From the first to the second quarter, the rise in the total production index was 2.4 per cent. The seasonally adjusted index of industrial production fell slightly in June with declines in manufacturing and mining more than offsetting gains in electrical power and gas output. Total durable manufacturing rose despite the decline in electrical apparatus and supplies; non-durables declined with a majority of its components. The decline in mining was concentrated in the metal mining component.

EMPLOYMENT AND AVERAGE HOURS WORKED

The main factors contributing to the increase in the June seasonally adjusted index of industrial composite employment were gains in forestry, durable goods manufacturing, and construction employment. Seasonally adjusted average hours worked remained high in June and as a result the second quarter exhibited a gain over the first.

RETAIL TRADE

Seasonally adjusted retail trade in June fell sharply from an irregularly high May level. All types of retail outlets participated in the decline. Department store sales, while falling, remained at a high absolute level.

HOUSING STARTS AND COMPLETIONS

Housing starts in municipalities of over 5,000 declined by 22 per cent between the first and second quarter, but were somewhat higher in July. Completions rose sharply by 29 per cent in the second quarter, reflecting the large number of starts in late 1958 and early 1959; the July figure maintained the second quarter level.

⁽¹⁾Averages or totals of unadjusted data.⁽²⁾Seasonally adjusted at annual rates.⁽³⁾Three-term moving average of seasonally adjusted data.^{*}Seasonal adjustment computed by Central Mortgage and Housing Corporation.

EXPORTS AND IMPORTS AND CORPORATION PROFITS

Seasonally adjusted exports in the second quarter were up 10 per cent above the first, but showed a decline between June and July. The July drop was widespread, with agricultural, wood and non-ferrous commodities bearing the brunt of the decline. Seasonally adjusted imports continued to climb steadily during May with only non-ferrous and miscellaneous commodities registering declines.

(1) Annual estimates are as of June 1. (2) Seasonally adjusted at annual rates. (3) Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period. (4) Rough cords of 128 cu. ft. (5) In urban areas of 5,000 population and over. (6) Average of weekly rates. (7) Middle of month. (8) Revised according to new bench marks. (9) This total includes all generating agencies producing over ten million kilowatt hours per year. (10) End of period. Including personal savings deposits.

(1) "De facto" population. Annual data are for June. (2) At current market prices. Annual data are totals of the four quarters. (3) Output of building and civil engineering work excluding the output of building operatives employed by private firms outside the building and civil engineering industries. (4) All manufactured products other than food, fuel and tobacco. (5) Exchange Equalisation Account holdings of gold and convertible currencies. Gold is valued at 250 s. per ounce fine, and currencies at parity, except the Canadian dollar which is valued at the appropriate rates.

4

Note.—Until the end of 1957, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1958 and 1959 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

⁽¹⁾Not applicable to figures on population and immigration.

⁽²⁾Yukon and North-West Territories not included in figures for births, marriages and deaths.

⁽³⁾Estimates are given by years as of June 1 and by quarters for Canada. ⁽⁴⁾Exclusive of stillbirths. ⁽⁵⁾Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

Note: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1926-1956", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

8

⁽¹⁾The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item.

⁽²⁾Includes adjusting entry.

⁽³⁾Includes residual error of estimate.

⁽⁴⁾This item differs from column 5, bottom of page 6, in that it excludes

undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board.

Note: For a detailed description of concepts, sources and methods see D.B.S. Reference Paper (61-502) "Revised Index of Industrial Production, 1935-57."

⁽¹⁾The M.C.D. measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. For a fuller description see D.B.S. Reference Paper (61-502).

⁽¹⁾Seasonal (formerly supplementary) benefit data included. ⁽²⁾On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included. ⁽³⁾The number of new cases of recorded unemployment among insured persons. ⁽⁴⁾Estimates are based on average weekly number of payments. ⁽⁵⁾The number of calendar weeks during which a benefit payment was made. ⁽⁶⁾Revised to relate to the Thursday nearest to the last day of the month. ⁽⁷⁾Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957-June 1958 which included fishing claimants.

⁽¹⁾As of July, 1957, the statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes. ⁽²⁾The annual and monthly "all industries" totals for 1957 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote (1).

⁽¹⁾In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values.

⁽²⁾Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlogs.

⁽³⁾Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys.

⁽⁴⁾Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period.

⁽¹⁾Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. ⁽²⁾Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ⁽³⁾Customs exports. ⁽⁴⁾Mill shipments destined for export.

Source: Monthly Report on Primary Iron and Steel—D.B.S.

Note.—The data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included.

⁽¹⁾Shipments for further processing within own firm and for sale in Canada. ⁽²⁾Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

*Construction of dwelling units.

Note.—These data are the results of a nation-wide survey carried out by the Bureau of Statistics with the co-operation of the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more are enumerated completely. Approximately 800 sample areas lying outside these municipalities were also chosen for complete enumeration.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1957 and 1958 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. ⁽¹⁾Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. ⁽¹⁾The coverage was extended to 507 municipalities in 1948, and as of 1959, stands at 1,014, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

*See also Tables 18 and 19.

⁽¹⁾Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1957 are final prices.

From August, 1957 to July, 1958 western wheat prices were initial plus interim payments. Since August 1, 1958, only initial prices are available for wheat, oats and barley.

⁽²⁾Include subsidy on hogs. ⁽³⁾Based on price for hogs including Dominion premium. A rise in ratio favours production of beef. ⁽⁴⁾Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights.

⁽¹⁾Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. ⁽²⁾Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. ⁽³⁾Annual data are monthly averages of crop year. ⁽⁴⁾Includes eggs for hatching.

* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available.

⁽¹⁾Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. ⁽²⁾Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. ⁽³⁾Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only. ⁽⁴⁾In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards.

Balances were as follows:

June 1957-28

Sept. 1957-34

Dec. 1957-32

Mar. 1958-29

June 1958-31

Sept. 1958-39

Dec. 1958-35

⁽⁴⁾Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds.

⁽⁵⁾Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

⁽¹⁾Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1957 and 1958 differ from the sum of the monthly data due to revisions which cannot be allocated by months. ⁽²⁾As of January, 1958, statistics include the British Columbia Electric Railway. ⁽³⁾As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system.

⁽¹⁾Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month.

⁽²⁾The September 30, 1957 and subsequent figures for 'personal savings deposits' exclude, and the figures for 'other notice deposits' include, the amount of \$140 million, being the deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes, which were reclassified at that time in the returns of the banks to the Department of Finance. The figures prior to September 30, 1957 are thus not comparable with those since that date.

⁽³⁾Mainly deposits of foreign banks.

⁽⁴⁾Capital, rest fund and undivided profits as at the latest fiscal year-end.

⁽⁵⁾Including issues payable in foreign currency.

⁽⁶⁾Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans.

⁽⁷⁾Excluding Canadian day to day loans.

⁽⁸⁾Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities.

⁽⁹⁾Including loans to instalment finance companies.

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

⁽¹⁾The Canada totals by months for 1957 and 1958 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. The provincial monthly averages for 1957 have been revised to agree with the Canada total, but the provincial monthly figures have not. Neither the monthly averages nor the monthly figures for 1958 have been revised to agree with the Canada total.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction.
Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

(2) Includes, in addition to the industries listed, Tobacco.
(3) Includes Printing and Publishing and Allied Industries.

Canadian Minerals

have contributed tremendously to the nation's economic development

In 1886, when systematic data were first collected, minerals were produced to the value of \$10 million

Now the value exceeds \$2 billion a year, and the mining industry employs 145,000 persons, pays \$600 million in salaries and wages and upwards of \$900 million for materials and supplies. Minerals are a major contributor to Canada's export trade.

The Dominion Bureau of Statistics keeps close tab on the developments in this field and publishes 9 monthly and 20 annual reports on the full range of Canadian minerals. The monthlies provide current production and other data, while the annuals contain detailed statistics on products shipped, employment, salaries and wages, materials and supplies used and other information.

Monthly Reports are issued separately on—

NATIONAL ACCOUNTS – INCOME AND EXPENDITURE

SECOND QUARTER 1959

Introductory Review

Gross National Product continued to advance in the second quarter of 1959, and was at a seasonally adjusted annual rate of \$34.7 billion, a gain of 2 per cent over the level of the first quarter. This most recent advance continues the upswing which was showing increasing vigour in the closing months of 1958, and has brought the Gross National Product in the second quarter of this year to a level some 7 per cent above the same quarter one year earlier. As in the preceding quarter, the second quarter gain in Gross National Product was represented largely by an increase in the physical volume of goods and services produced; however, final product prices were fractionally higher during the quarter.

Business outlays for new plant and equipment made an important contribution to the rise in Gross National Product during the second quarter. Both non-residential construction and investment in new machinery and equipment rose above the first quarter by 5 per cent, on a seasonally adjusted basis. This was the first significant increase in business capital expenditures since the two-year decline which began in the early part of 1957. (See chart page ii.) The reversal in trend in this important component of final demand represents a new expansionary element in the current business upswing. Partly as a result of special factors, exports of goods and services, which were down in the first quarter, rose sharply in the second quarter, accounting for more than half of the rise in total Gross National Expenditure. The gain in exports was fairly widespread and reflected rising demands of the United States economy for Canadian export goods, especially in the wood and metal products groups. Personal and government expenditures on goods and services continued to rise in the quarter, but the advance in consumer spending was very modest, amounting to only about 1 per cent. Outlays for new housing fell further, continuing the first quarter decline, while the rate of

business inventory accumulation moderated from the high level recorded in the first quarter.

Over the course of the past year, reversals in trend have occurred in a number of major categories of demand, and the pattern of the nation's total expenditure has shown a marked change. Business inventories have swung around from a position of heavy liquidation in the second quarter of 1958, to one of net accumulation; the turn-around here has been the equivalent of about \$0.6 billion in terms of new demands on production. The downward drift in business capital expenditure for new plant and equipment which was moderating in the latter part of 1958, has been reversed, and outlays by the business sector are now providing a positive stimulus to the rise in final demand. Both non-residential construction and machinery and equipment outlays are, of course, still far below the very high levels reached at the peak of the capital investment boom in 1957; but machinery and equipment outlays in the second quarter were running 10 per cent above year-ago levels, while non-residential construction outlays were only a little below the second quarter of last year. Recovery in the general pace of business activity has been accompanied, as in the past, by a reversal in the trend of imports; after declining by 10 per cent from early in 1957 to a low point in early 1958, imports of goods and services have turned sharply upward in the past twelve months, and are now running 9 per cent above year-ago levels. Outlays for new housing, which rose by 40 per cent from the first quarter of 1957 to the end of 1958 and provided a strong sustaining force throughout the recession period, have now been moving downward for two quarters. These reversals in trend in major categories of Gross National Expenditure during the past twelve months have produced a pattern in the over-the-year comparisons 1958 to 1959 which differs sharply from that of the preceding 12-month period. The following table provides some perspective of the nature and magnitude of these shifts in the nation's spending pattern: –

	Change, 2Q 1957 to 2Q 1958	Change, 2Q 1958 to 2Q 1959	Annual averages 6 mos. 1959 compared with full year, 1958

The flow of income to the personal, business, and government sectors during the past twelve months has also been marked by changes in the trend of important income components, and by shifts in the compositional pattern of the income aggregates. There has been a sharp change in the composition of personal income as between the proportion derived from productive activity (notably wages and salaries), and the proportion arising through transfer payments from government. From the second quarter of 1957 to the second quarter of 1958, transfer payments accounted for more than 49 per cent of the rise in total personal income. However, between the second quarter of 1958 and the second quarter of 1959, transfer payments accounted for only 11 per cent of the rise in total personal income, with the remainder of the increase coming from gains in those income components which are linked directly to productive activity. Labour income, for example, has shown an over-the-year gain of 8 per cent in 1959, compared with a

much smaller gain of less than 3 per cent in the preceding 12-month period. Turning to the business sector, corporation profits have shown a sharp reversal in trend during the past twelve months; having declined steadily from a peak early in 1956, they turned sharply upward in the third and fourth quarters of 1958, and have shown little change in either direction in the first half of 1959. In the second quarter of this year they were running 23 per cent above year-ago levels, compared with a decline of 14 per cent in the same comparison made one year earlier. The sharp rise in profits during the past year, and the lesser role of transfer payments as a component of personal income, has altered the relationship between national income and personal income. Whereas a year ago, personal income was rising at a much more rapid rate than national income, in the current period personal income has lagged slightly behind the advance in national income.

Selected personal and business income components	Change, 2Q 1957 to 2Q 1958	Change, 2Q 1958 to 2Q 1959	Annual averages 6 mos. 1959 compared with full year, 1958
	per cent		
1. Wages and salaries	2.5	8.0	6.8
2. Transfer payments	37.0	7.8	4.3
3. Personal income	6.3	7.5	6.1
4. Corporation profits before taxes	-13.8	23.2	13.1
5. Rent, interest and miscellaneous investment income ..	1.9	11.0	4.7
6. Net income, Non-farm unincorporated business	2.8	4.5	1.5
7. National income	2.4	8.1	6.3
Selected government revenues (All levels of government)			
8. Direct personal taxes	-13.6	22.2	
9. Corporation tax liabilities	-13.0	25.1	
10. Indirect taxes	-0.9	10.0	
Total	-6.7	15.8	

One of the striking developments of the current period of expansion has been the sharp recovery in the flow of tax revenues to the government sector. From the second quarter of 1957 through to the second quarter of 1958, the decline in tax revenues from the three major tax sources amounted to almost 7 per cent, for all levels of government combined. From the second quarter of 1958 through to the second quarter of 1959, the rise in revenues from these three sources has amounted to about 16 per cent, reflecting the recovery in profits, higher employment and earnings, a higher level of imports, sales and shipments, and increases in tax rates. About three-fourths of the rise in revenues during the past twelve months represents higher revenues collected by, or accruing to the Federal government.

Production and Employment

Unlike the first quarter when a large part of the rise in production was concentrated in mining and durable manufacturing, the expansion in output in the second quarter (seasonally adjusted), was registered on a broad front. As in the past, support continued to come from the service industries but the major part of the over-all gain in real output originated in the goods-producing industries. Output in construction rose fractionally, reflecting the increase in non-residential construction.

Although the changes in production in the individual manufacturing industries were quite varied, both durables and non-durables recorded gains in excess of 2 per cent. Small losses were

recorded in tobacco products, products of petroleum and coal, chemicals, transportation equipment and electrical apparatus and supplies. Advances in production ranging from 2 to 9 per cent occurred in the food, rubber, wood products, paper products, printing and publishing, iron and steel, textiles, clothing, beverages, leather and non-ferrous metals industries.

Trends in output of the various metals and minerals were extremely mixed, making for a rate of increase in mining output as a whole which was small compared with that of the first quarter when the settlement of industrial disputes contributed to a substantial increase. Production in forestry continued to rise moderately.

The increase in real output in the first half of the year compared with the first half of 1958 amounted to 5 per cent, with the goods-producing industries and the service-producing industries showing about the same rate of gain. Output in construction was lower, but all other industries increased their output. Among the gains recorded are 6 per cent in trade, 9 per cent in forestry, and 7 per cent in both mining and manufacturing.

The 5 per cent advance in the physical volume of goods and services produced in the first half of 1959 was accompanied by a rise in employment amounting to about 2.5 per cent. Thus, production has risen at about twice the rate of employment over the course of the past year. A significant advance in output per worker is not unusual in the early stages of an expansion, and a similar development has characterized the recovery in the United States. This same phenomenon was noted in Canada in the early phases of the 1954-1955 recovery.

The survey of establishments, while not comprehensive in coverage as is the Labour Force Survey, provides some interesting detail on the changes in employment by industry between the two years. Compared with the same period a year ago, in the first six months of 1959 the industrial composite index was higher by close to 1 per cent, the changes in both directions being small in all the industrial divisions. Trade, finance, insurance and real estate, and the service group show gains in employment of around 2 per cent, as does the non-durable segment of manufacturing. Employment in durable manufacturing and transportation, communication and storage was down about 1 per cent while employment in mining shows the largest change of all, a decline of 3 per cent. In spite of the extent of the improvement in the employment situation, by June of this year, the mining and manufacturing indexes, seasonally adjusted, had not regained their pre-recession levels.

On a seasonally adjusted basis, the rise in employment from the first to second quarter of this year amounted to about 1 per cent, still somewhat short of the rise in output. The number of persons without jobs and seeking work continued to show a more than seasonal decline.

Gross Fixed Capital Formation

Renewed expansion in business expenditures on plant and equipment gave an impetus to economic activity in the second quarter. Rising to a seasonally adjusted annual rate of \$5,344 million, they were 5 per cent higher than in the first quarter; both components showed about the same rate of increase. The expansion in outlays for machinery and equipment coincided with and was supported by a rise in imports. Outlays for non-residential construction and for machinery and equipment, particularly the latter, were still far short of the levels reached during the investment boom of 1957.

The over-all rise in expenditures on fixed investment was dampened by a further drop in outlays for housing. Housing starts continued to decline from the record rate of 1958 and outlays in the second quarter were 4 per cent below those of the first quarter and 8 per cent below the 1958 average.¹

While expenditures on gross fixed capital formation in the first half of 1959 were almost at the level of the same period a year earlier, the composition of the total had changed appreciably. The upswing in outlays for machinery and equipment had raised this component 4 per cent; both residential construction and non-residential construction were running 2 to 3 per cent lower.

The mid-year survey of investment intentions provided evidence of an improvement in the state of business confidence. Where investment plans had been revised, revisions for the most part were in an upward direction and more new projects were being initiated than had been the case a year earlier. Recent figures on employment, value of industrial and commercial building permits, and new orders and shipments all point to renewed strength in the business investment sector.

Change in Business Inventories

The trend toward restocking of business inventories, which began in the closing quarter of 1958, continued in the second quarter of 1959. However, the rate of accumulation was considerably lower

¹ In 1959, a new sample survey of housing starts and completions was instituted in areas outside the centres of 5,000 population and over. It is possible that the decline indicated in the present value figures may be somewhat over-stated because of the change to the new sample survey.

than in the first quarter, largely as a result of the behaviour of stocks of automobiles; sales of motor vehicle dealers kept pace with deliveries in contrast to a substantial accumulation of stocks in the first quarter. Manufacturers' shipments and wholesalers' sales both rose in the second quarter, and the

further build-up of stocks in these industries presumably reflects an effort by businessmen to maintain appropriate stock sales ratios. However, stocks sales ratios continued to decline in the second quarter in manufacturing and in retail trade but remained unchanged in wholesale trade.

MANUFACTURING-STOCK/SHIPMENTS RATIO

Seasonally Adjusted

NOTE: THE RATIO REFERS TO THE LAST MONTH OF THE QUARTER

Manufacturers' inventories continued to accumulate in the second quarter but at a lower rate. The build-up was the result of small but widespread increases in the durable goods industries. In the non-durable lines manufacturers on balance liquidated stocks, the most pronounced liquidation being in the leather, paper products and clothing industries.

Retailers' inventories remained much the same in the second quarter, after having been built up substantially in the first. This development was mainly the result of the movement of stocks of motor vehicle dealers mentioned earlier.

The heaviest accumulation occurred in the hands of wholesale traders whose stocks, particularly in construction and building materials and in industrial machinery and commercial equipment, showed substantial gains. The accumulations occurring in the above-mentioned durable groups

reflect a combination of the higher level of investment in machinery and equipment, sharp increases in imports and the possibility of an interruption in supplies of steel from the United States.

Exports and Imports of Goods and Services

Exports of goods and services, seasonally adjusted, rose by 6½ per cent in the second quarter; while this is one of the largest quarter-to-quarter gains in several years, it reflects an exceptionally high level of commodity exports in the month of June. Advances were recorded in both the merchandise and service items in the second quarter. Within the merchandise total, increases were fairly general among commodity groups, with the most pronounced gains occurring in wood and wood products, non-ferrous metals, and animal products, when seasonal factors are taken into account. Commodity exports to the United States were at an all-time record.

BOTH EXPORTS AND IMPORTS OF GOODS AND SERVICES SHOWED A STRONG ADVANCE IN THE SECOND QUARTER

BILLIONS OF DOLLARS

(DATA SEASONALLY ADJUSTED AT ANNUAL RATES)

In the first half of this year, merchandise exports have averaged about 2 per cent above the same period one year ago. Gains in some commodity groups have been partially offset by losses in others. The increases were concentrated in such minerals as uranium, iron ore and asbestos, in such forest products as lumber, woodpulp, plywood and veneer, and in farm machinery. The declines have occurred in such farm products as wheat and other grains, in such metals and mineral products as nickel, copper and petroleum, and in aircraft and some chemicals. In 1958, exports of wheat and military aircraft in particular had been unusually high by reason of government loans and foreign contracts. The first half-year comparison shows a sharp recovery in shipments to the United States offsetting a decline in sales to most major overseas markets.

Imports of goods and services, seasonally adjusted, continued to rise in the second quarter, advancing by 2½ per cent from the first quarter and attaining the highest level since the first quarter of 1957. All of the increase is attributable to the merchandise items.

Merchandise imports were nearly 4 per cent above the first quarter, on a seasonally adjusted basis, with the increases fairly general among the commodity groups. However, much the largest gain occurred in iron and its products, reflecting not

only the rising tempo of economic activity in Canada, but also some stock-piling of steel in anticipation of a work stoppage in the United States.

In the first half of 1959, merchandise imports have been running 10 per cent above the levels of the same period one year ago. The increases have again been fairly widespread among industrial materials, consumer goods, and some types of industrial equipment. Gains in automobiles, farm implements, and machinery and metal products have been prominent among the year-to-year increases.

While the unusually sharp advance in exports of goods and services brought some narrowing of the deficit on current international account in the second quarter, for the first half of 1959 the deficit has averaged more than one-third higher than in the same period a year ago.

Personal Income and Saving

The flow of income to the personal sector continued upward in the second quarter, rising by 2 per cent, on a seasonally adjusted basis. All components showed gains over the first quarter, with the exception of interest, dividends, and net rental income of persons, where a drop in dividend payments brought about a slight decline in the aggregate. The gain in net income received by farm

operators reflected in large part higher adjustment payments to farmers by the Canadian Wheat Board. The increase in transfer payments from government reflected higher payments by the provinces to hospitals under the new national hospital insurance scheme. The rise in labour income, the major component of personal income, was substantial, though smaller than in the first quarter; developments in this component of income are discussed in a later section.

In the first two quarters of this year, disposable income has advanced less rapidly than personal income, as payments of direct personal taxes have risen sharply and have absorbed an increasing share of the income flow. At the same time, however, the rise in consumer spending has fallen short of the rise in disposable income, and the rate of personal saving has continued to advance. In the first half of 1959, personal saving has averaged 7.8 per cent of disposable income, compared with 7.4 per cent in the first half of the year 1958, and 7.0 per cent for the year 1958 as a whole.

Labour Income

Labour income, seasonally adjusted, advanced a further 1½ per cent in the second quarter. The rate of increase was small compared with the first quarter when the cyclical upward trend in the wage-bill, reinforced by such special factors as the termination of industrial disputes and retroactive payments to non-operating employees of the railways, made for the largest quarter-to-quarter gain in several years. Whether measured by the comprehensive labour force survey or the more restricted industrial composite index, employment increased by about 1 per cent between the two quarters, on a seasonally adjusted basis. Thus the gain in labour income continues to reflect some advance in average earnings.

In the second quarter, trends in labour income in the individual industries coincided fairly closely with the trend of labour income as a whole, in contrast to several recent quarters of conflicting and divergent movements. There were gains of 1 to 2 per cent in all industries except forestry and transportation, communication and storage. Labour income in forestry was unchanged and it declined moderately in transportation, communication and storage, reflecting the retroactive wage increase which had swollen first quarter earnings in that industry.

By comparison with the first half of 1958, labour income in the same period of this year advanced 8 per cent. The gains were fairly substantial in almost all industries. Mining is an

important exception; as a result of the lower level of employment the wage-bill in this industry showed little change from a year earlier. Labour income in manufacturing was higher by 5 per cent, reflecting a slight gain in employment, some increase in hours of work and higher average earnings. Relatively large gains occurred in the service industries.

Personal Expenditure on Consumer Goods and Services

Personal expenditure on consumer goods and services showed a modest gain in the second quarter, advancing by about 1 per cent over the level of the first quarter, on a seasonally adjusted basis. Since consumer prices on the whole were unchanged, this increase represents an equivalent gain in real consumption.

Most of the advance in personal spending is attributable to durables which were up about 2 per cent, that is, much the same rate of increase as in the first quarter. Almost all categories of durables recorded small gains.

Purchases of non-durables rose rather less than 1 per cent, reflecting mixed and largely offsetting changes in the various groups; tobacco and alcoholic beverages and footwear were the principal items where purchasing increased, and fuel and clothing the principal items where declines were registered.

Expenditure on services in the second quarter was virtually unchanged. This stability reflected a large decline in net expenditures abroad offsetting gains in other service items.

By comparison with the first half of 1958, the first half of 1959 shows a distinct shift in the pattern of consumer spending. The rate of increase in purchases of durables (11½ per cent), is large relative to the 6½ per cent increase in total spending. Purchases of automobiles account for the major part of the increase in durables. Spending for services rose nearly 8 per cent, but spending on non-durables was only 4½ per cent higher. The major categories such as food, clothing and tobacco and alcoholic beverages show rates of increase that range from 3 to 5½ per cent.

In the first half of 1959, total per capita consumption in real terms was close to 3 per cent higher than in the same period of 1958; real per capita consumption of durables was higher by 5 per cent and of non-durables and services rather more than 2 per cent.

Corporation Profits and Other Investment Income

In the second quarter of 1959, as in the first, corporate profits, seasonally adjusted, showed very little change from the high level reached at the end of 1958. Most manufacturing industries earned larger profits, the most pronounced gains being in iron and steel and in wood, paper, printing, and publishing and allied industries. Two groups of industries—mining, quarrying and oil wells, and transportation, communication and storage—both reported higher capital cost allowances with the result that their net profits were down substantially. In other industries, changes in profits were mixed and offsetting.

In the first half of 1959, corporation profits have been running at a level about 22 per cent above the same period a year ago. The stepped-up

pace of economic activity has brought about a striking rise in profits in almost all industries, including manufacturing, 21 per cent; mining, quarrying and oil wells, 32 per cent; wholesale trade, 32 per cent; retail trade, 8 per cent. The level of corporation profits in the second quarter, at a seasonally adjusted annual rate of \$2.8 billion, was not far below the peak of \$2.9 billion reached in the first half of 1956.

Rents, interest, and miscellaneous investment income, seasonally adjusted, rose by about 2 per cent in the second quarter, reflecting advances in rental incomes and in the trading profits of government business enterprises. In the first half of 1959, this component of national income has been running about 12 per cent above the level of the previous year.

INDUSTRIAL PRODUCTION

In July, the seasonally adjusted index of industrial production declined marginally. Manufacturing, utilities and mining contributed to the fall off. Non-durables rose under the impact of a strong gain in chemical output. Durables fell off largely due to the adverse effect on wood products of a major strike. A substantial decline in crude petroleum and non-metals accounted for a fall off in mining.

Note: The seasonally adjusted components of the manufacturing production index formerly presented in this section are now shown in Table 6 along with additional series of the revised index not previously published.

⁽¹⁾Averages or totals of unadjusted data.

⁽²⁾Seasonally adjusted at annual rates.

⁽³⁾Gross National Product at market prices excluding accrued net income of farm operators from farm production.

EMPLOYMENT AND AVERAGE HOURS WORKED

In July, the index of seasonally adjusted industrial composite employment fell. Most industries were stable. The industrial dispute in British Columbia, which resulted in declines in wood products and forestry, was the major factor in the decline. Seasonally adjusted average hours worked remained high in June.

LABOUR INCOME AND FARM CASH INCOME

The fall in seasonally adjusted labour income during July can be traced to the effect of the west coast strike on wood products and forestry. Farm cash income in the second quarter fell further, allowing for seasonal variation.

RETAIL TRADE*

Seasonally adjusted retail trade has remained relatively flat since the beginning of the year, if declining motor vehicle dealer sales are excluded. July sales recovered from the June fall off. Department store sales continued to climb erratically.

⁽¹⁾Averages of unadjusted data.⁽²⁾Source: Sales of New Motor Vehicles and Motor Vehicle Financing.

*The current revision employs an improved shopping day adjustment to the raw data prior to seasonal adjustments. In addition to correcting for variations in the number of shopping days in different months, each day of the week is weighted according to the percentage of weekly sales normally transacted on that day for that store type. Sales may differ between months not only because months vary in length, but also because the number of Fridays and Saturdays differ. Shopping tends to be concentrated on these days.

SELECTED GROUPS IN RETAIL TRADE

New passenger car sales, seasonally adjusted, have been falling sharply since the beginning of the year. Clothing store sales have been flat, while furniture and radio and appliance store sales have begun to show some strength over the last few months.

HOUSING STARTS AND COMPLETIONS

In August, seasonally adjusted housing starts in municipalities of 5,000 or over remained above the level established in the second quarter. Seasonally adjusted completions maintained a high level despite an August decline.

⁽¹⁾Averages or totals of unadjusted data.⁽²⁾Seasonally adjusted at annual rates.⁽³⁾Three-term moving average of seasonally adjusted data.

*Seasonal adjustment computed by Central Mortgage and Housing Corporation.

EXPORTS, IMPORTS AND CORPORATION PROFITS

Seasonally adjusted exports have continued to move irregularly upward in current months. The strength is wide-spread with only the wood components exhibiting any weakness. Seasonally adjusted imports continued to climb steadily during May with only non-ferrous and miscellaneous commodities registering declines. Corporation profits in the second quarter, seasonally adjusted, continued to move upward from a cyclical trough.

(1) Annual estimates are as of June 1. (2) Seasonally adjusted at annual rates. (3) Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period. (4) Rough cords of 128 cu. ft. (5) In urban areas of 5,000 population and over. (6) Average of weekly rates. (7) Middle of month. (8) Revised according to new bench marks. (9) This total includes all generating agencies producing over ten million kilowatt hours per year. (10) End of period. Including personal savings deposits.

(1) "De facto" population. Annual data are for June. (2) At current market prices. Annual data are totals of the four quarters. (3) Output of building and civil engineering work excluding the output of building operatives employed by private firms outside the building and civil engineering industries. (4) All manufactured products other than food, fuel and tobacco. (5) Exchange Equalisation Account holdings of gold and convertible currencies. Gold is valued at 250 s. per ounce fine, and currencies at parity, except the Canadian dollar which is valued at the appropriate rates.

4 Note.—Until the end of 1958, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1959 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

⁽¹⁾Not applicable to figures on population and immigration. ⁽²⁾Yukon and North-West Territories not included in figures for births, marriages and deaths. ⁽³⁾Estimates are given by years as of June 1 and by quarters for Canada. ⁽⁴⁾Exclusive of stillbirths. ⁽⁵⁾Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

NOTE: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1926-1956", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

8

⁽¹⁾The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item.

⁽²⁾Includes adjusting entry.

⁽³⁾Includes residual error of estimate.

⁽⁴⁾This item differs from column 5, bottom of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board.

Note: For a detailed description of concepts, sources and methods see D.B.S. Reference Paper (61-502) "Revised Index of Industrial Production, 1935-57."

9

(1) The M.C.D. measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. For a fuller description see D.B.S. Reference Paper (61-502).

*Average weekly wages and salaries.

⁽¹⁾Includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies, and non-metallic mineral products.

⁽²⁾Includes foods and beverages, tobacco and tobacco products, rubber products, leather products, textile products except clothing, clothing, paper products, printing, publishing and allied industries, products of petroleum and coal, chemical products, and miscellaneous manufacturing industries.

⁽¹⁾ Seasonal (formerly supplementary) benefit data included. ⁽²⁾ On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included. ⁽³⁾ The number of new cases of recorded unemployment among insured persons. ⁽⁴⁾ Estimates are based on average weekly number of payments. ⁽⁵⁾ The number of calendar weeks during which a benefit payment was made. ⁽⁶⁾ Revised to relate to the Thursday nearest to the last day of the month. ⁽⁷⁾ Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957-June 1958 which included fishing claimants. ⁽¹⁾ As of July, 1957, the statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes. ⁽²⁾ The annual and monthly "all industries" totals for 1957 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote (1).

⁽¹⁾In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values.

⁽²⁾Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlogs.

⁽³⁾Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys.

⁽⁴⁾Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period.

Source: Monthly Report on Primary Iron and Steel—D.B.S.

Note.—The data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included.

⁽¹⁾Shipments for further processing within own firm and for sale in Canada. ⁽²⁾Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

⁽¹⁾Includes some silvery pig iron formerly included with ferro-alloys.

⁽²⁾Excluding shipments for processing.

⁽³⁾Imports include, in addition to all other

shapes, wire and wire rope. Imports exclude castings, forgings, fittings and couplings.

⁽⁴⁾Monthly average.

⁽⁵⁾Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

*Construction of dwelling units.

Note.—These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely. The remainder of the country is covered on a sample basis.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1957 and 1958 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. ⁽¹⁾Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. ⁽¹⁾The coverage was extended to 507 municipalities in 1948, and as of 1959, stands at 1,014, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

⁽¹⁾Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. ⁽²⁾Planks and boards, flooring and square timber. ⁽³⁾Hollow blocks including fireproofing and load bearing tile. ⁽⁴⁾For building insulation only.

⁽⁵⁾Figures cover the production of firms which normally account for 85 per cent of the total for Canada. ⁽⁶⁾Includes concrete chimney blocks. ⁽⁷⁾Factory sales of firms which normally account for 96% of total Canadian production.

*See also Tables 18 and 19.

⁽²⁾Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1957 are final prices.

From August, 1957 to July, 1958 western wheat prices were initial plus interim payments. Since August 1, 1958, only initial prices are available for wheat, oats and barley.

⁽¹⁾Include subsidy on hogs.⁽³⁾Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.⁽⁴⁾Previous to January, 1958,

quotations referred to steers up to 1,000 lbs. Now they refer to all weights.

⁽¹⁾ Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. ⁽²⁾ Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. ⁽³⁾ Annual data are monthly averages of crop year. ⁽⁴⁾ Includes eggs for hatching.

* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. (1) Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. (2) Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. (3) Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only. (4) In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards. Balances were as follows.

	Sept. 1957-34	Dec. 1957-32	Mar. 1958-29	June 1958-31	Sept. 1958-39	Dec. 1958-35	Mar. 1959-32
(1) Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds							
(2) Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

⁽¹⁾Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1957 and 1958 differ from the sum of the monthly data due to revisions which cannot be allocated by months. ⁽²⁾As of January, 1958, statistics include the British Columbia Electric Railway. ⁽³⁾As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system.

⁽¹⁾Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month.

⁽²⁾The September 30, 1957 and subsequent figures for 'personal savings deposits' exclude, and the figures for 'other notice deposits' include, the amount of \$140 million, being the deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes, which were reclassified at that time in the returns of the banks to the Department of Finance. The figures prior to September 30, 1957 are thus not comparable with those since that date.

⁽³⁾Mainly deposits of foreign banks.

⁽⁴⁾Capital, rest fund and un-

vided profits as at the latest fiscal year-end.

⁽⁵⁾Including issues payable in foreign currency.

⁽⁶⁾Securities purchased direct from issuer with a term of less

an one year at time of issue are classified as loans.

⁽⁷⁾Excluding Canadian day to day loans.

⁽⁸⁾Loans to grain dealers and exporters.

⁽⁹⁾Loans to

ance purchase of Canada Savings Bonds at time of issue.

⁽¹⁰⁾Total of foreign funds, short term foreign investments and other foreign currency assets less foreign

currency liabilities.

⁽¹¹⁾Including loans to instalment finance companies.

⁽¹⁾Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks.⁽²⁾Subsidiary coin issued by the Mint less coin held

by Bank of Canada and chartered banks in Canada.

⁽³⁾Less total float, i.e. cheques and other items in transit (net).⁽⁴⁾At September 30, 1957, the deposit

balances of religious, educational and welfare institutions used for business purposes, about \$140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date.

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

⁽¹⁾The Canada totals by months for 1957 and 1958 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. The provincial monthly averages for 1957 have been revised to agree with the Canada total, but the provincial monthly figures have not. Neither the monthly averages nor the monthly figures for 1958 have been revised to agree with the Canada total.

⁽¹⁾Ordinary, Industrial and Group.

⁽²⁾Part of the apparent increase between 1957 and 1958 is due to a change in the "inflation" factors used to bring figures of reporting firms up to the estimated total level for all insurance companies. Source: The Canadian Life Insurance Officers Association.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction. Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

(2) Includes, in addition to the industries listed, Tobacco, Printing and Publishing and Allied Industries.

NOTE: Symbols used: Throughout the Review (...) means "not available"; (—) means "nil" or "less than can be shown with number of digits used"; (p) signifies "preliminary" and (r) indicates "revised". In some cases the annual data for 1958 and 1959 are provisional.

Canada's Forests

and forest-based industries play a major role in the industrial life of the nation . . . as they have for more than a Century.

On the nation's forests are based two of the great enterprises that loom large on the Canadian scene—the pulp and paper industry and the lumber industry.

Wood is so versatile it is difficult to find any form of industrial activity in which it is not used directly or indirectly.

The forests are the source of almost a third of all Canadian exports, of which newsprint, wood pulp and lumber are the foremost items.

The Dominion Bureau of Statistics publishes statistical information on Canada's primary forest production and on the wood and paper products industries on a regular monthly and annual basis. The monthlies provide current production and other data, while the annuals contain detailed statistics on products shipped, employment, salaries and wages, materials and supplies used, as well as other information.

Monthly Reports are issued separately on—

- Pulpwood Production ● Peeler Logs, Veneer and Plywood ● Hard Board
- Sawmills East of the Rockies ● Sawmills in British Columbia ● Rigid Insulating Board

Annual Reports are issued on—

- Operations in the Woods ● Lumber ● Furniture ● Roofing Paper
- Hardwood Flooring ● Sash, Door and Planing Mills ● Pulp and Paper
- Veneer and Plywood ● Miscellaneous Wood-Using Industries ● Printing Trades
- Paper Box and Bag Industry ● Miscellaneous Paper-Using Industries

Besides the above there are general reviews of the wood and paper products groups of industries.

RECENT ECONOMIC TRENDS IN CANADA AND THE UNITED STATES – A COMPARISON

A year ago it was becoming evident that the North American economy was moving into a new phase of expansion and by June of this year comprehensive indicators of economic activity were well above their previous peaks. During the summer months, prolonged industrial disputes in basic industries in the United States introduced cross-currents into the American economy and upward trends were arrested or reversed. At the same time, some important indicators in Canada showed signs of pause or hesitation. The purpose of the present article, which brings up to date a previous article published in the Canadian Statistical Review, October, 1958, is to review and compare economic developments in the two countries during the past year or more.

Economic aggregates in Canada and the United States have followed broadly similar patterns although the timing, magnitude and direction of the movement of some individual components has differed as between the two countries. It must always be borne in mind that as the recession itself was mild in Canada, so the recovery and expansion has been less vigorous than in the United States. However, by the second quarter of 1959 the rate of expansion in relation to previous peaks was about the same in the two countries. By the second quarter of 1959, Gross National Product in Canada had reached an annual rate of \$34.7 billion, about 10 per cent higher than at its recessionary low in the closing quarter of 1957; Gross National Product in the United States had reached a rate of \$484.5 billion, about 12½ per cent above its low in the first quarter of 1958. These rates are 8 and 9 per cent above the pre-recession peak. While prices have continued to move gradually upward in both countries, the major part of these impressive gains represents higher real output. Reflecting the impact of industrial disputes, the estimate of the Gross National Product for the third quarter in the United States is \$481 billion.

Supported by rising disposable consumer income, consumer expenditure in both countries, but particularly in the United States, has acted as an expansionary influence. Business expenditures for plant and equipment, reversing their previous downward trend, had begun to rise around the turn of the year but by the second quarter of 1959 were still running well below previous peaks in both countries. Meanwhile, the re-stocking of business inventories was augmenting the demands on current production. With a steel strike in prospect, the building-up of inventories was especially important in the United States in the first half of this year. The rise in activity and incomes was pushing up government revenues

at the same time as it curtailed those government expenditures closely related to recession; by the second quarter of 1959 the government account¹ in both countries was moving toward balance, in contrast to the high deficits of a year earlier, and the impetus toward expansion was increasingly coming from the private sector.

There are major differences in the role of housing in the two countries. In Canada, expenditures on residential construction began to fall in 1959, after having played an important part in sustaining and raising economic activity in the preceding eighteen months; in the United States, housing took an expansionary role about a year later and continued in it through the second quarter of 1959. The pattern of behaviour in the external sector also differs in the two countries. In Canada, external transactions were initially a sustaining factor in that exports were fairly well maintained and imports fell sharply but in recent quarters the deficit on current international account has widened as the progress of recovery arrested and then reversed the downward trend of imports. In the United States, the external sector contributed to the downturn in economic activity in 1957 and thus far has made little contribution to recovery.

Before going on to discuss in more detail economic developments in the two countries, changes in the aggregates and in selected components of expenditure and income over the past three years are set out for convenient comparison in the table appearing on page 4.

Production, Employment and Profits

Industrial production in Canada, after some hesitation in the summer months of 1958, began to show a firmer trend in the closing quarter and by December was 5 per cent above its recession low a year earlier but still a little below its previous peak. For the most part, it continued to rise in the opening months of 1959 but the improvement did not continue during the summer months. The index for August stood at 163.3, which compares with a high of 165.5 in April. All the main components show somewhat the same pattern of hesitation in recent observations. While total manufacturing output had almost returned to its pre-recession peak, output of durable manufactures in August was still about 9 per cent below its previous high. Mining production, though receding a little in recent months, was well above its previous high.

¹ Consolidating all governments, on a calendar year basis, and following the National Accounts approach, which differs from the budgetary approach.

¹ Including military pay and allowances.

² All levels of government.

In the United States the decline in industrial production was more severe than in Canada and the recovery more vigorous. Between the end of 1956 and the spring of 1958 the index dropped from 147 to 126 or 14 per cent and it had not recovered lost ground until March of this year. The index reached 155 by June, at which time total manufacturing and the durable segment of it were above previous peaks. Despite a marked recovery in mineral production, this component was significantly lower than early in 1957. Industrial disputes, beginning in July in the steel industry and a month later in the non-ferrous metal industry, affected the level of industrial production in the summer months. By September, the index had fallen to 148, compared with a pre-strike figure of 155.

The level of employment in Canada was well maintained, despite the recession. In fact the number of persons with jobs in the non-farm sector was slightly higher in 1958 than in 1957, considering annual averages. After receding a little in the winter of 1957-58, employment showed no clear

upward trend until the beginning of 1959, on a seasonally adjusted basis. By July of this year the number of persons with jobs in the non-farm sector was about 4 per cent higher than a year earlier. However, the rising trend was arrested during the summer months and September figures indicate a slight decline, after seasonal adjustment.

The effect of recession is clearly evident in statistics of employment collected on an establishment basis. Manufacturing employment fell fairly consistently during 1957 and has since shown remarkably little change. Thus the index for August of this year is only slightly higher than a year earlier; the same is true of the durable segment of it. However, hours of work in manufacturing, which had fallen during the recession, are considerably higher than a year ago. Employment in mining is significantly lower than in August of last year.

In the United States the decline in non-agricultural employment was more pronounced and more prolonged than in Canada. However, by July of

this year non-agricultural employment had risen to a level 4 per cent higher than a year earlier and well above its pre-recession peak.

Employment in manufacturing and in the durable segment of it, as in Canada, despite considerable recovery, had not returned to its pre-recession peak by mid-year. During the summer months the level of employment in manufacturing was affected by strikes and the September figure is considerably lower than two months earlier. As in Canada, hours of work have risen with the progress of recovery and expansion. It is noteworthy that in both countries gains in production have exceeded gains in employment, reflecting a cyclical improvement in output per worker.

In both countries corporate profits reversed their downtrend during the course of 1958 and had risen sharply by the first half of 1959. In fact, in the United States in the second quarter, corporate profits made a further substantial gain bringing them well above previous peaks. In Canada, corporate profits showed very little change in the first half of this year, after a marked increase in the third and fourth quarters of 1958. However, they were still somewhat below previous peaks.

The Trend of Capital Formation

By the second quarter of 1959 business expenditures for plant and equipment in Canada were again providing a stimulus to the expansion of economic activity. Rising 5 per cent between the first and second quarters, they reached a seasonally adjusted annual rate of \$5,344 million, still 9 per cent lower than in the record year 1957; expenditure on machinery and equipment in particular was well below its previous high.

In Canada, the survey of investment plans reflects growing confidence in the outlook. The mid-year review of investment intentions indicated that where plans made at the beginning of the year had been revised the revisions were for the most part in an upward direction and more new projects were being initiated than had been the case a year earlier. Statistical indicators of investment activity, now available into the third quarter, confirm the continuation of the recent up-turn.

Likewise, in the United States, business outlays for plant and equipment continued to rise in the second quarter. This third increase in succession brought outlays about half of the way back to their previous peak.

Surveys of investment intentions are always subject to qualifications and difficult to interpret. In view of the duration of the steel strike in the

United States and the consequent shortage of basic materials, the recent survey of investment intentions in that country is particularly difficult to assess. It may be that plans will not be carried out in the time period contemplated or may be otherwise modified. However, it seems worthwhile to set out these intentions in outline.

In the United States, as in Canada, business plans for capital investment were revised upward during the course of the year. The results of the latest quarterly survey of investment intentions, released in September, indicated planned outlays of \$34.3 billion in the third quarter and of \$35.3 billion in the fourth at seasonally adjusted annual rates. These figures compare with actual expenditures of \$30.6 billion and \$32.5 billion in the first two quarters of this year. If plans are realized, business capital outlays in 1959 would be 9 per cent higher than in 1958 but still about 10 per cent below the record year 1957. The upward trend in planned investment is widespread by industry.

Outlays on housing in Canada, which had been rising throughout 1957 and 1958, to reach a record rate of \$1,876 million in the fourth quarter of last year, declined for the second time in succession to a level of \$1,616 million in the second quarter of this year. Housing has been much affected by the availability of mortgage funds. Direct lending by Central Mortgage and Housing Corporation was sharply reduced early in the year and approved lenders, finding N.H.A. loans less attractive, curtailed their lending. Central Mortgage and Housing Corporation increased its lending during the spring and summer and arrangements for direct lending to builders became effective September 1st, but private sources continued to provide less financing. In these circumstances, housing starts, which had been extremely high, fell sharply in the early months of the year although there was some improvement in urban areas in the summer months. Completions, however, reflect the low level of starts some months earlier.

Expenditures in residential construction in the United States began to rise early in 1958 and rose rapidly thereafter to reach a record rate of \$23.1 billion in the second quarter of 1959. However, starts began to decline in the early summer, reflecting tightness in mortgage markets. Private housing starts, reaching a peak annual rate of 1,434,000 units in April, had fallen to 1,325,000 units by September; these figures compare with a record of 1.35 million units in 1950.

In the closing quarter of 1958 business inventories in Canada began to accumulate, following two quarters of rapidly declining rates of liquidation, thus providing increasing support to the

level of economic activity. The rate of accumulation accelerated sharply in the first quarter of 1959 and fell back in the second. Thus far the rate of stock-building in relation to Gross National Product has been low compared with that of the year 1956. Despite some further building-up of manufacturers' stocks in the second quarter, stocks-shipments ratios continued to decline.

Likewise in the United States, the shift from high rates of liquidation to accumulation of business inventories was a supporting element in 1958. However, the rate of accumulation continued to rise in the second quarter of 1959, reaching an annual rate of \$10½ billion; in relation to Gross National Product, this rate is higher than in 1956. In spite of the build-up, stocks did not keep pace with the rise in production and sales. The accumulation of stocks of steel in anticipation of the strike was a factor in the movement of inventories in the first half of the year.

The Role of Government

In both countries the sequence of recession and recovery has strongly influenced the flows of funds between the government and the private sector. A larger volume of unemployment, together with legislative changes in social insurance schemes, swelled the stream of transfer payments and at the same

time the easing in business activity reduced government revenues, particularly those related to the volatile corporate sector. In Canada the consolidated government account¹ moved from a surplus of \$70 million in 1957 to a deficit of \$1.0 billion in 1958; in the United States the shift was also pronounced—from a surplus of \$1.4 billion in 1957 to a deficit of \$10.7 billion in 1958. In both countries the progress of recovery is reflected in a decided narrowing of the deficit.

In Canada, government expenditure on goods and services continued to rise in the first half of 1959. Transfer payments also advanced, reflecting higher payments by the provinces to hospitals under the new national hospital insurance scheme. At the same time revenues were responding to the rise in production, employment and incomes, the higher level of sales, shipments, and imports and some increase in rates of taxation. The sum of revenues for all levels of government from the three major sources of taxation, direct personal taxes, corporate taxes² and indirect taxes, which had fallen 7 per cent between the second quarter of 1957 and the second quarter of 1958, had risen 16 per cent by the second quarter of 1959; about three quarters of the rise in revenues during the past year are those of the Federal Government. The result of these developments on the revenue side was a decided reduction in the deficit.

In the United States, Federal Government purchases of goods and services remained about the same in the second quarter of 1959, after having risen from quarter to quarter during 1958. Both defence and non-defence expenditures had risen in 1958 reflecting higher costs, rising defence requirements and larger outlays for farm programmes. Since the beginning of 1959, non-defence purchases have fallen and the increase in defence expenditures has slackened. Likewise, Federal Government transfer payments have stabilized in the first half of 1959. The drop in unemployment benefits associated with the improvement in the labour market was offset by the higher payments under old age and survivors insurance resulting from the amendment to the Social Security Act.

Meanwhile, Federal collections under social security schemes rose in the first half of 1959 in the United States reflecting legislative changes in the rate and base of the tax, effective at the beginning of the year, as well as the improvement in employment and earnings. The increases in personal taxes and corporate profits tax accruals were of about the same order of magnitude. By the second quarter

¹ See footnote 1, Page 1.

² Considered on an accrual basis.

of 1959, the Federal deficit had fallen to \$0.5 billion compared with the peak of about \$10.9 billion a year earlier. With rising revenues and some decline in expenditure, the combined deficit of state and local governments was also falling.

The External Sector

In Canada, the effect of recessionary influences abroad and other adverse factors was to halt the expansion of exports, rather than to reduce them. As is characteristic of periods of easing economic activity at home, imports fell fairly sharply so that developments in the external sector initially tended to support levels of domestic production. Thus commodity exports in 1958 were only fractionally below their previous peak in 1957 and commodity imports were lower by 8 per cent. Recovery thus far has brought about an upsurge in imports without a commensurate advance in exports.

Even though easing demand abroad had a decided impact on sales of many important export products, merchandise export totals had been maintained in 1958, largely because of continuing rapid expansion in sales of uranium, unusually large sales of certain farm products, and non-recurring factors, such as government loans and foreign contracts for military aircraft. Exports have shown a somewhat stronger trend thus far in 1959. In the first eight months of 1959, exports were only 1.5 per cent above those of the same period a year ago, but this small gain was the outcome of a 10 per cent increase in exports to the United States, largely offset by a decline in sales elsewhere, notably in Europe. Of the \$99 million drop in exports to Europe, \$60 million is accounted for by military aircraft. Important export commodities showed mixed trends. Exports of newsprint were a little higher, and planks and boards and woodpulp made notable gains, as did such other traditional export products as farm implements and machinery and asbestos. Exports of iron ore advanced sharply and sales of uranium made further major gains. However, exports of such important metals as copper and nickel, particularly the latter, were running below the level of a year earlier. Exports of wheat and other grains were lower, as were exports of crude petroleum.

The rising trend of merchandise imports, which began in the latter part of 1951, continued at an accelerating rate in 1959. Reflecting renewed stock-building, the up-turn in investment in plant and equipment and the further expansion of consumer expenditure, imports in the first eight months of this year were 11 per cent higher than in the same period of 1958. Imports from the United States, the traditional source of most of Canada's imports of capital goods, were up by nearly the same extent.

The result of these trends in commodity trade was a deficit on merchandise items in the first eight months of the year of \$494 million, compared with one of \$172 million a year earlier; in the same comparison, the deficit on commodity trade with the United States was \$550 million, as against \$500 million a year earlier. The virtual disappearance of Canada's long-standing surplus on overseas trade is one of the outstanding features of the year, even though this surplus has been dwindling for some time.

Turning to consider Canada's international current account as a whole, for which data are available for only the first six months of the year, 1959 has brought further widening in the deficit on invisible items. This growing gap is a consequence of the interest and dividends associated with mounting international indebtedness and the growth in expenditures abroad for other purposes, such as travel and freight and shipping, which accompanies general economic expansion. The deficit of \$482 million on invisible items in the first half of 1959, the largest ever recorded and well over half the total of \$837 million, compares with one of \$450 million in the first half of 1958. Largely as a result of developments in money markets, the proportion of the deficit financed by the inflow of short-term capital was larger in the first half of 1959 than in the same period a year earlier.

Turning to consider the United States, merchandise exports dropped sharply from mid-1957 to early 1958 and this decline was an important factor in the recession in economic activity. Although exports began to rise in the second quarter of 1959, thus far they have made little contribution to the progress of recovery. These developments are in striking contrast to those of 1953-1954 when exports were a sustaining influence during the downswing in economic activity and an expansionary influence during the subsequent recovery. Thus merchandise exports advanced 60 per cent between the first half of 1954 and the first half of 1957, reflecting the strength of demands abroad, intensified at the end of 1956 by the Suez crisis. By the first half of 1958 exports had fallen more than 20 per cent and they had fallen a further 5 per cent by the first half of 1959.

In the 1957-1958 recession, as in the preceding one, United States imports declined only moderately. In the first half of 1958 merchandise imports were down 5 per cent from the same period a year earlier but by the first half of 1959 they were nearly 20 per cent above the same period of 1958. Indeed, second quarter merchandise imports were at an all-time high and slightly in excess of non-military merchandise exports.

The high level of United States imports this year undoubtedly reflects some special circumstances, notably anticipations of the steel strike, as well as the upswing in business activity. The cyclical up-turn in United States imports appears to have been reinforced by the growing ability of the industrially advanced countries to compete in the American market. Thus imports of finished manufactures rose in 1958 almost enough to offset the decline in imports of raw materials. In that year they were about 55 per cent above the 1952-1956 average, compared with an increase of only about 15 per cent for imports as a whole.

With those divergent movements of exports and imports, the United States surplus on merchandise account¹ in the first six months of the year dwindled to an annual rate of \$0.5 billion, compared with \$3.3 billion in 1958 and \$6.1 billion in 1957.

The United States provides dollars to foreign countries well in excess of what is necessary to cover the surplus on trade and services through the medium of military expenditures abroad, government grants and loans and private investment. The consequence of the developments in trade described above is that the rate at which foreign countries acquire dollars has accelerated.

The Personal Sector

Disposable personal income in Canada, having receded a little in the first half of 1957, began to rise thereafter and by the second quarter of 1959 was running at an annual rate of \$24.0 billion, about 6 per cent higher than in 1958 and about 14 per cent higher than in 1957. The rise in labour income,² virtually uninterrupted during the recession, brought it to \$18.2 billion in the second quarter of 1959, 7 per cent higher than in 1958. Likewise transfer payments were well above the 1958 rate in the second quarter of 1959. Most other components of personal income were also higher.

In the United States likewise, recession had little impact on disposable personal income. The annual rate reached by the second quarter of 1959 was about 6 per cent higher than in 1958, the same rate of increase as in Canada, and about 9 per cent higher than in 1957. Labour income by the second quarter of this year was about 9 per cent above the 1958 rate. While transfer payments levelled out in the first half of the year, other components of personal income, with the exception of farm income, also rose in the second quarter.

It is against this background of trends in income that the strength of consumer spending must be viewed.

In Canada, consumer expenditure continued to rise from quarter to quarter throughout the recession. The impact of recession and recovery was registered in changing rates of increase. Thus the gain of more than 3 per cent in the fourth quarter of 1958 was the largest quarterly increase in recent years and contrasts with one of less than 1 per cent in the same quarter of 1957.

Consumer expenditure continued to rise in the first half of 1959 but the quarterly gains were fairly small in terms of recent Canadian experience and notably lower than those recorded in the United States.

Purchases of durables, having risen about 9 per cent in the closing quarter of 1958, continued to advance at a rate of about 2 per cent in the first two quarters of 1959, bringing them to a second quarter level 11 per cent above the previous peak in the same quarter of 1956. Purchases of non-durables rose in both quarters but expenditure on services was virtually unchanged in the second quarter. This interruption in the long-term upward trend in services was the result of a sharp drop in net expenditures abroad offset by increases in other service items. The second quarter rate of increase for consumer expenditure was only about 1 per cent, in contrast to a 2½ per cent increase in the United States.

In 1958 disposable personal income rose considerably more than personal spending. An unusually high rate of personal saving continued to characterize the personal sector in the first half of 1959. In Canada, as in the United States, the rise in spending has been accompanied by an increased use of consumer credit.

In the United States, consumer expenditure began to rise early in 1958, after having receded a little during the recession; it continued to rise, and at an accelerating rate, in the first half of 1959. Indeed, consumer purchasing in the second quarter was about 2½ per cent above the first quarter rate and 8 per cent above the low point in the first quarter of last year. With consumer prices very little higher, most of these increases represent a gain in real consumption.

The second quarter advance in purchases of durables was unusually large and the expansion in purchases of non-durables was also among the largest quarterly gains since the recovery began. Purchasing of automobiles and parts, which was

¹ Excluding military aid programmes.

² Including military pay and allowances.

already relatively high, rose sharply in the second quarter to reach a rate only exceeded in the record year 1955.

Reflecting the renewed strength of demand, the recovery has been marked by a sharp rise in the output of a wide range of consumer goods. The Federal Reserve Board index of output of consumer durables by June had reached 145, on a seasonally adjusted basis, close to 50 per cent higher than at the recession low and 9 per cent higher than at the beginning of the year, though still somewhat below the peak in the third quarter of 1955.

Throughout the recovery in the United States the rise in personal spending has matched fairly closely the growth in disposable personal income. Nevertheless, consumer credit outstanding began to rise during the course of 1958 and by the end of July of this year it was 10 per cent above the level of a year earlier.

Conclusion

The opening paragraphs characterized economic trends in Canada in the summer months as showing signs of hesitation. Such important indicators as industrial production, non-agricultural employment, labour income and retail trade all receded at some stage of the summer; for the most part the changes were small and they form no consistent pattern. Housing starts in urban areas remained level in August and September, after having risen in July. Exports continued to be fairly strong in the third

quarter, bringing the nine-month total nearly 3 per cent above that of the same period of last year. These conflicting movements suggest a moderation in the third quarter of the rapid rates of expansion characteristic of the economy in the first half of the year. However, the history of business cycles in the United States suggests that periods of hesitation are not uncommon during the course of an expansionary phase.

The economic situation in the United States is clouded by the prolonged strike in the steel industry. The preliminary estimate of Gross National Product, \$481 billion for the third quarter, \$3.5 billion lower than in the second quarter, involves a decline in the rate of inventory accumulation of about \$9.5 billion, presumably in part a sequel to the high rates of build-up in the first half of the year. At the same time, business expenditures for plant and equipment were somewhat higher but expenditures for housing, reflecting the decline in housing starts mentioned earlier, were down slightly. In spite of some decline in personal income during the period, consumer expenditure continued to rise, but at a much lower rate than in the second quarter; purchases of durable goods fell a little. By the end of the quarter, the heavy inventories of steel accumulated earlier were being rapidly depleted and cut-backs in production were spreading among the steel-using industries. However, the settlement of the three previous strikes in the steel industry in the United States was followed by a sharp rebound in economic activity.

INDUSTRIAL PRODUCTION

The seasonally adjusted index of industrial production edged upward in August. Manufacturing production showed little change with gains in non-durables offset by a decline in durables. The strike in lumber on the west coast and the more extensive model change-over in automobiles accounted for most of the fall off in durables. Mixed movements in mining, with fuels up and non-metals down, resulted in a marginal decline in total mining. In August, electricity and gas recouped most of its July fall-off.

EMPLOYMENT AND AVERAGE HOURS WORKED

The August seasonally adjusted index of industrial composite employment rose despite conflicting movements in its components. Manufacturing employment rose marginally reflecting gains in both durables and non-durables. Seasonally adjusted average hours worked have remained stable over the last few months.

RETAIL TRADE*

In August, seasonally adjusted retail trade fell off. The decline was widespread with the majority of retail outlets moving down from their July level. Grocery and combination stores, the major exception to the trend, posted a strong gain. Department store sales have remained high despite irregular movements in current months.

⁽¹⁾Averages of unadjusted data.⁽²⁾Source: Sales of New Motor Vehicles and Motor Vehicle Financing.

*The current revision employs an improved shopping day adjustment to the raw data prior to seasonal adjustments. In addition to correcting for variations in the number of shopping days in different months, each day of the week is weighted according to the percentage of weekly sales normally transacted on that day for that store type. Sales may differ between months not only because months vary in length, but also because the number of Fridays and Saturdays differ. Shopping tends to be concentrated on these days.

SELECTED GROUPS IN RETAIL TRADE

Seasonally adjusted new passenger car sales in August exhibited little change from their July level. Clothing stores declined sharply while furniture, radio and appliance stores fell off after showing some strength over the last few months.

HOUSING STARTS AND COMPLETIONS

Seasonally adjusted housing starts in municipalities of 5,000 or over have remained relatively flat for the last six months. Seasonally adjusted completions declined again in September.

⁽¹⁾Averages or totals of unadjusted data.⁽²⁾Seasonally adjusted at annual rates.⁽³⁾Three-term moving average of seasonally adjusted data.

*Seasonal adjustment computed by Central Mortgage and Housing Corporation.

EXPORTS, IMPORTS AND CORPORATION PROFITS

Exports seasonally adjusted have moved steadily upward since the beginning of the year. Seasonally adjusted June imports remained at substantially the same level as in May, despite contrary movements in its components, agriculture and non-metallic imports fell off while iron and non-ferrous imports showed considerable strength.

(1) Annual estimates are as of June 1. (2) Seasonally adjusted at annual rates. (3) Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period. (4) Rough cords of 128 cu. ft. (5) In urban areas of 5,000 population and over. (6) Average of weekly rates. (7) Middle of month. (8) Revised according to new bench marks. (9) This total includes all generating agencies producing over ten million kilowatt hours per year. (10) End of period. Including personal savings deposits.

(1) "De facto" population. Annual data are for June. (2) At current market prices. Annual data are totals of the four quarters. (3) Output of building and civil engineering work excluding the output of building operatives employed by private firms outside the building and civil engineering industries. (4) All manufactured products other than food, fuel and tobacco. (5) Exchange Equalisation Account holdings of gold and convertible currencies. Gold is valued at 250 s. per ounce fine, and currencies at parity, except the Canadian dollar which is valued at the appropriate rates.

4

Note.—Until the end of 1958, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1959 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

⁽¹⁾Not applicable to figures on population and immigration.

⁽²⁾Yukon and North-West Territories not included in figures for births, marriages and

deaths. ⁽³⁾Estimates are given by years as of June 1 and by quarters for Canada.

⁽⁴⁾Exclusive of stillbirths.

⁽⁵⁾Immigrant admissions by country of last

permanent residence. Annual and quarterly figures are totals for the period.

NOTE: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1926-1956", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

8

⁽¹⁾The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item.

⁽²⁾Includes adjusting entry.

⁽³⁾Includes residual error of estimate.

⁽⁴⁾This item differs from column 5, bottom of page 6, in that it excludes

undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board.

Note: For a detailed description of concepts, sources and methods see D.B.S. Reference Paper (61-502) "Revised Index of Industrial Production, 1935-57."

⁽¹⁾The M.C.D. measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. For a fuller description see D.B.S. Reference Paper (61-502).

⁽¹⁾ Seasonal (formerly supplementary) benefit data included. ⁽²⁾ On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included. ⁽³⁾ The number of new cases of recorded unemployment among insured persons. ⁽⁴⁾ Estimates are based on average weekly number of payments. ⁽⁵⁾ The number of calendar weeks during which a benefit payment was made. ⁽⁶⁾ Revised to relate to the Thursday nearest to the last day of the month. ⁽⁷⁾ Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957-June 1958 which included fishing claimants.

⁽¹⁾ As of July, 1957, the statistics for individual industries exclude strikes in involving less than 100 workers. The total for all industries continues to include all strikes. ⁽²⁾ The annual and monthly "all industries" totals for 1957 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote (1).

⁽¹⁾In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values. ⁽²⁾Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlogs. ⁽³⁾Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys. ⁽⁴⁾Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period.

Source: Monthly Report on Primary Iron and Steel—D.B.S.

Note.—The data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included.

⁽¹⁾Shipments for further processing within own firm and for sale in Canada.⁽²⁾Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

⁽¹⁾Includes some silvery pig iron formerly included with ferro-alloys. ⁽²⁾Excluding shipments for processing. ⁽³⁾Imports include, in addition to all other shapes, wire and wire rope. Imports exclude castings, forgings, fittings and couplings. ⁽⁴⁾Monthly average. ⁽⁵⁾Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

*Construction of dwelling units.

Note.—These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely. The remainder of the country is covered on a sample basis.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1957 and 1958 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. ⁽¹⁾Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. ⁽¹⁾The coverage was extended to 507 municipalities in 1948, and as of 1959, stands at 1,014, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

⁽¹⁾Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. ⁽²⁾Planks and boards, flooring and square timber. ⁽³⁾Hollow blocks including fireproofing and load-bearing tile. ⁽⁴⁾For building insulation only.

⁽⁵⁾Figures cover the production of firms which normally account for 85 per cent of the total for Canada. ⁽⁶⁾Includes concrete chimney blocks. ⁽⁷⁾Factory sales of firms which normally account for 96% of total Canadian production.

*See also Tables 18 and 19.

(1)Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1958 are final prices.

Since August 1, 1958, only initial prices are available for wheat, oats and barley.

(2)Include subsidy on hogs.

(3)Based on price for hogs including Dominion

premium. A rise in ratio favours production of beef.

(4)Previous to January, 1958, quotations referred to steers up to 1,000 lbs.

Now they refer to all weights.

⁽¹⁾Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. ⁽²⁾Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. ⁽³⁾Annual data are monthly averages of crop year. ⁽⁴⁾Includes eggs for hatching. Source: Coarse Grains Quarterly, Wheat Review and Trade of Canada, D.B.S.

* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available.

⁽¹⁾Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. ⁽²⁾Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. ⁽³⁾Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only. ⁽⁴⁾In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards.

Balances were as follows:

	Sept. 1957-34	Dec. 1957-32	Mar. 1958-29	June 1958-31	Sept. 1958-39	Dec. 1958-35	Mar. 1959-32
--	---------------	--------------	--------------	--------------	---------------	--------------	--------------

⁽⁵⁾Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. ⁽⁶⁾Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

⁽¹⁾Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1957 and 1958 differ from the sum of the monthly data due to revisions which cannot be allocated by months. ⁽²⁾As of January, 1958, statistics include the British Columbia Electric Railway. ⁽³⁾As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system.

⁽¹⁾Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. ⁽²⁾The September 30, 1957 and subsequent figures for 'personal savings deposits' exclude, and the figures for 'other notice deposits' include, the amount of \$140 million, being the deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes, which were reclassified at that time in the returns of the banks to the Department of Finance. The figures prior to September 30, 1957 are thus not comparable with those since that date. ⁽³⁾Mainly deposits of foreign banks. ⁽⁴⁾Capital, rest fund and undivided profits as at the latest fiscal year-end. ⁽⁵⁾Including issues payable in foreign currency. ⁽⁶⁾Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. ⁽⁷⁾Excluding Canadian day to day loans. ⁽⁸⁾Loans to grain dealers and exporters. ⁽⁹⁾Loans to finance purchase of Canada Savings Bonds at time of issue. ⁽¹⁰⁾Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. ⁽¹¹⁾Including loans to instalment finance companies.

⁽¹⁾Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks.⁽²⁾Subsidiary coin issued by the Mint less coin held

by Bank of Canada and chartered banks in Canada.

⁽³⁾Less total float, i.e. cheques and other items in transit (net).⁽⁴⁾At September 30, 1957, the deposit

balances of religious, educational and welfare institutions used for business purposes, about \$140 million, were reclassified from "personal savings deposits" to "other notes deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date.

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

⁽¹⁾The Canada totals by months for 1957 and 1958 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. The provincial monthly averages for 1957 have been revised to agree with the Canada total, but the provincial monthly figures have not. Neither the monthly averages nor the monthly figures for 1958 have been revised to agree with the Canada total.

⁽¹⁾Ordinary, Industrial and Group.

⁽²⁾Part of the apparent increase between 1957 and 1958 is due to a change in the "inflation" factors used to bring figures of reporting firms up to the estimated total level for all insurance companies. Source: The Canadian Life Insurance Officers Association.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction. Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

(2) Includes, in addition to the industries listed, Tobacco, Printing and Publishing and Allied Industries.

CANADA'S FISHERIES

As early as the middle of the fifteenth century venturesome European fishermen were regular visitors to the prolific fishing grounds off Canada's Atlantic Coast . . . And here were written the first pages in the history of the nation's commercial fisheries.

Now nearly 80,000 Canadian fishermen harvest a bountiful crop of food fish from both sea and inland waters . . . and some 14,000 workers are employed in Canada's fish-processing and handling industries.

About 150 kinds of fish and shellfish are taken in commercial operations running in an average year to some 2,000,000,000 pounds with a marketed value of about \$200,000,000. Canadians consume about 13.5 pounds per person a year and large quantities of fish and fish products are exported.

The Dominion Bureau of Statistics publishes statistical information on Canada's fisheries on a monthly and annual basis. Data on production, freezings, stocks, imports, exports and prices are published in the monthly reports, and these and other data on capital equipment, employees and salaries and wages are contained in the annuals.

Monthly Reports: ● Review of Canadian Fisheries Statistics
● Fish Freezings and Stocks

Annual Reports: ● Canada Summary ● Newfoundland ● Prince Edward Island
● New Brunswick ● Nova Scotia ● Quebec
● Ontario, Prairie Provinces and Northwest Territories
● British Columbia ● Fish Processing Industry

RECENT DEVELOPMENTS IN THE WORK OF THE DOMINION BUREAU OF STATISTICS¹

Public interest in statistics has grown in the past few decades and more and more statistical measurement is coming to be used as a basis of decision-making by governments, business and others. At the same time, the development and systematization of sampling theory has made possible the adaptation of new techniques of measurement. Recently, the use of electronic computers has opened up new possibilities in the way of ease and economy in complex and large-scale computations. The work of the Dominion Bureau of Statistics is changing in response to these needs and potentialities. Each year usually brings some new projects, further progress on those already under way, the adaptation of some new methods, and expansion in scope and improvement in quality of existing series. It is the purpose of this article to inform readers of new developments in the Bureau's work in the past year.

The article will refer only incidentally to current publications. Many of them will be familiar to readers and in any event they are listed in the Bureau's catalogue of *Current Publications*. This catalogue was revised in the past year and the revision included a new subject grouping and a permanent code number for all publications.

The Census and Social Statistics

The Census Division was occupied during the year with planning for the 1961 Census. The questionnaires are to include the traditional questions but the need for new statistics has led to elimination of some items and extension of others. The use of electronic computers is expected to speed up tabulation of the returns and to facilitate greater cross-classification.

A major re-organization of criminal and correctional statistics is the most important new development in the general field of social statistics. The inadequacy of existing data was first pointed out by the Archambault Commission in 1938 and subsequent commissions and committees continued to emphasize the need for a sound statistical service. Government agencies having administrative responsibilities in this field have stressed the importance of more and better factual information as have individuals and organizations concerned with problems of crime and punishment.

The objective of the new programme is to develop comprehensive, integrated and improved statistics. The establishment of uniform definitions, records and reporting procedures is a first step. When this stage of the work has been completed, the programme of publications calls for annual analytical reports for Canada and regions on selected criminal and correctional statistics and for studies of selected offences.

The introduction of hospital insurance under joint Dominion-provincial sponsorship is leading to an expansion in hospital statistics; the new programme calls for more complex submissions by the hospitals and for greater promptness in processing by the Bureau. Another matter of interest concerns hospitals for the tuberculous and the mentally ill; detailed censuses of these institutions will soon be available.

Economic Statistics

The results of a sample survey of farm and farm-family expenditure and income covering the year 1958 are now being processed but they are not likely to be available until mid-1960. The survey is intended to provide bench-marks for farm finance statistics, up-to-date weights for the construction of indexes of prices paid by farmers, better figures of net income from farm production, and estimates of income of farmers from non-farm sources.

The coverage of the monthly series on manufacturing shipments has been improved to the point that a provincial breakdown for total shipments can be published. Likewise in merchandising statistics, further area breakdowns have become available, in that the retail sales series now provides statistics for each of the Maritime Provinces. Plans were made for a bench-mark survey of wholesale trade, covering the year 1958, and surveys of manufacturers' trading outlets and of agents and brokers, both covering the year 1957, were completed, these surveys being the first since 1951.

The historical revision of the estimates of labour income was completed and a reference paper will soon be published. Monthly reports now show seasonally adjusted labour income by regions, and some industry sub-totals; provincial estimates and further industry detail are available quarterly.

The Bureau is instituting a study of labour mobility, the first such study attempted in Canada. This study is based on a sample of records of the

¹ This article was published in a somewhat condensed form in the November issue of the *Canadian Journal of Economics and Political Science*.

insured population secured once each year. The location, occupation, industry and age of insured persons have been tabulated for the years 1952 to 1956 inclusive, and similar data for later years will also be examined.

This year the Bureau inaugurated an experimental sample study of initial claims for unemployment insurance benefits. Initial claims, which represent about 70 per cent of total claims, are believed to be of special interest insofar as changes in this group anticipate future changes in total claims. The sample was selected with special attention to the need for provincial data on characteristics of claimants.

A new type of wholesale price index is being added to the Bureau's range of price statistics and a reference paper on this subject will soon be published. The new series, to be known as the *Manufacturers' Selling Price Indexes*, differs from the Wholesale Price Index in that the scope is more restricted and the classification is by industry rather than by commodity. The new index is part of the programme of compiling statistics within the framework of an internally consistent and analytically meaningful classification. An industrial classification of wholesale prices takes account of complex and highly fabricated products and is better suited to the nature of the economic organizations that intervene between the producer and the retailer. The base-period weighting system (1953) and the base-period reference period (1956) are updated from the base of the wholesale price index (1935-1939). The new series supplements but does not displace the present index of wholesale prices.

Three price indexes for investment goods are being developed—industrial machinery and equipment, highway construction, and thermal and hydro-electric generating installations. The first project is well advanced and the other two are at a preliminary stage.

A variety of new developments in the area of transportation and public utilities can be reported.

Some of these new or expanded series will provide data for study of competition between various forms of transport. The results of a survey of inter-city truck traffic based on a revised sample, showing commodity detail comparable with that shown for rail transport, are now available quarterly. Statistics will be issued next year on ton-miles of cargo carried in coast-wise shipping. A sample survey of passenger air traffic between Canada and Europe was started this year. Civil aviation statistics are to draw together data on traffic flows, both passenger and cargo, by origin and destination.

Two gaps in the existing data on rail and water transport are now filled with the recent inclusion of piggy-back traffic in railway freight statistics and of cargo loadings and unloadings at non-customs ports in shipping statistics.

In 1960, a sample survey of passenger car travel is being inaugurated. This survey will secure data on miles travelled and fuel consumed on a provincial basis. At the same time, statistics of motor vehicle registrations will be put on a quarterly basis.

A census of Electric Power Equipment as of December, 1958, covering thermal and hydraulic installations, was completed this year. This census, the first in many years, will be taken every five years.

A new series on gas pipelines was started, and monthly and annual reports are to be published shortly. Monthly statistics on distribution by gas utilities, on an expanded basis, are now being collected; the published detail for 1959 will include domestic, industrial and commercial uses, by provinces.

Finally, reports on radio and television broadcasting are being resumed, after having been interrupted for some years. The series is being resumed as of the year 1957.

The report *Research-Development Expenditures in Canada* will include, for the first time, Federal Government outlays; this project is carried out jointly with the National Research Council.

Up to the present, reports on pension plans have been limited to the financial aspects of trustee plans. In view of the growing importance of pension schemes as a medium of personal savings, steps are being taken to include non-financial aspects and to cover funds other than the trustee type.

An analysis of Canada's short-term external assets and liabilities has been completed and a reference paper on this subject is scheduled for publication soon. Hitherto the annual reports on Canada's balance of international payments have lacked analytical detail on short-term assets abroad and have not been comprehensive in that they excluded data on short-term receivables and payables. The new work makes it possible to complete the estimates of Canada's international assets and liabilities for the years since 1945 and provides some special analysis for the year 1956.

Research Projects

The development of inter-related price-volume-value data for the quarterly National Accounts is an important aspect of the work of the Research and Development Division. Two approaches to this problem are being followed: the direct measurement of real output by industry and the deflation of expenditure along conventional lines.

Implicit price deflators on an annual basis are published annually in the National Accounts, with the caution that they must be interpreted with care since they have current rather than fixed weights and thus reflect changes in the product mix as well as pure price changes. This qualification applies even more forcibly to the quarterly estimates which have radically different weighting patterns from quarter to quarter as a result of seasonal factors. Accordingly, a Laspeyere-type base-weighted price indicator is being developed which will be free from the influence of quarterly shifts in weighting. This programme should culminate in publication, quarterly, of the disposition of real output by main expenditure categories and the changes in real output by industry of origin, seasonally adjusted.

The other research projects of the Division are in the fields of income-size distribution, financial statistics, the inter-industry flow of goods and services (commonly known as input-output) and the stock of fixed capital.

A sample survey of non-farm families was undertaken in May and June, 1959, to obtain data on incomes, liquid assets and indebtedness. It is expected that the results will be published late in 1960. Income-size distributions for non-farm families and individuals for 1957 were published in July in *Distribution of Non-Farm Incomes in Canada by Size, 1957* (Catalogue No. 13-512). Another survey developed to obtain similar income-size distribution is planned for the spring of 1960.

An inter-departmental committee on financial statistics has begun to study the steps which might be taken to present available financial statistics in an integrated form and to fill important gaps in the existing data. Immediate attention will be given to statistics which throw light on the financing of capital formation by corporations.

The inter-industry flow table for 1949, published in *The Inter-Industry Flow of Goods and Services, Canada, 1949* has been revised to take account of more up-to-date data. At the same time, the method of tracing commodities from producer to user was

changed so that the revised table is at producers' prices. This revised table, together with its inverse matrix and other supplementary tables, will be published late this year. Plans are being made for the construction of another table for the year 1961.

The perpetual inventory method is being used to prepare estimates of the net and gross stock of fixed capital in constant and current dollars. The estimates will be extended backwards for as many years as data on gross capital formation, length of life of assets, and prices permit. It is hoped that an important by-product will be estimates of capital consumption allowances for calculation of net capital formation.

Standard Classification Systems

A revised issue of the *Standard Industrial Classification Manual* (1948) has recently been completed and will be issued about the end of the year. The revised classification distinguishes some 300 industries in 11 industry divisions. It is expected that most of the Bureau's industrial series (e.g., Census of Industry, Population Census, Monthly Employment Statistics) will produce statistics at substantially this level of detail. It is planned to implement the revised classification in 1961. The 1961 Censuses of population and of merchandising will use the new system.

The *Standard Commodity Classification Manual* is now well advanced and the first of the three volumes has already been printed; the others will be available in the near future. The implementation of this classification will produce co-ordinated commodity statistics. The principal sources of commodity statistics are exports and imports, manufacturers' shipments, materials and supplies used and wholesale prices. At present each operation has its own system of grouping and presenting the data and the various systems of classification in use are uneven in quality from a technical point of view.

The need for a more meaningful classification of trade and production statistics has been evident for some years. The present schedule calls for the adoption of the Standard Commodity Classification for exports in January, 1960 and for imports in January, 1961.

Training Programme

An Inter-divisional Sampling Studies' Committee was appointed early in 1959. Its immediate task was

to take stock of the Bureau's needs and resources in the field of sampling and its ultimate aim is to achieve a co-ordinated programme of sampling for the Bureau as a whole.

In order to develop talent for implementing sampling methods in various subject matter fields, the committee established a training programme for subject matter specialists who are involved in sampling operations in their respective divisions. The first half of the programme was devoted to the basic principles of sampling and the second half to problems of application as they arose in the Bureau's operations.

Electronic Computers

An electronic data processing centre is being established in the Dominion Bureau of Statistics to serve the many and varied computational needs of the Bureau and to act as a service centre for the work of other departments of government. An IBM 705 Model III Electronic Data Processing System, including a document reader, will be in operation at the beginning of 1961. Initially, the main emphasis will fall on the 1961 Census but the computer is also to be used from the beginning for suitable non-census work. Seasonal adjustment, employment and pay-rolls, imports and exports, the labour force surveys and the consumer price index are among the series which appear to be most suited for programming at this stage of planning.

INDUSTRIAL PRODUCTION

The strength exhibited in the seasonally adjusted index of industrial production in September was distributed over a broad base with manufacturing, mining, and electricity and gas all contributing. Within the manufacturing component, durables; iron and steel, transportation equipment and wood in particular, registered marked gains, while non-durables declined marginally. Metal and non-metal mining, and fuels moved up briskly.

NOTE: The seasonally adjusted components of the manufacturing production index formerly presented in this section are now shown in Table 6 along with additional series of the revised index not previously published.

⁽¹⁾Averages or totals of unadjusted data.

⁽²⁾Seasonally adjusted at annual rates.

⁽³⁾Gross National Product at market prices excluding accrued net income of

farm operators from farm production.

EMPLOYMENT AND AVERAGE HOURS WORKED

Increased employment in manufacturing accounted for most of the rise in the September composite index of industrial employment. The termination of the west coast forestry strike accounts for most of the gain within durables. Seasonally adjusted, average hours worked in manufacturing were marginally lower in September. Both the durable and non-durable components contributed to the decline.

LABOUR INCOME AND FARM CASH INCOME

Total labour income rose sharply in September. The resumption of work in the west coast forestry industry was a major contributing factor.

RETAIL TRADE*

In September, seasonally adjusted retail trade regained its July level after falling in August. Most types of retail outlets registered gains over their seasonally adjusted August levels.

⁽¹⁾Averages of unadjusted data.

⁽²⁾Source: Sales of New Motor Vehicles and Motor Vehicle Financing.

*The current revision employs an improved shopping day adjustment to the raw data prior to seasonal adjustments. In addition to correcting for variations in the number of shopping days in different months, each day of the week is weighted according to the percentage of weekly sales normally transacted on that day for that store type. Sales may differ between months not only because months vary in length, but also because the number of Fridays and Saturdays differ. Shopping tends to be concentrated on these days.

SELECTED GROUPS IN RETAIL TRADE

In September, new passenger car sales exhibited little change from the July and August level. Clothing store sales regained their July level while furniture and appliance store sales fell fractionally.

⁽¹⁾Averages or totals of unadjusted data.⁽²⁾Seasonally adjusted at annual rates.⁽³⁾Three-term moving average of seasonally adjusted data.^{*}Seasonal adjustment computed by Central Mortgage and Housing Corporation.

EXPORTS, IMPORTS AND CORPORATION PROFITS

Seasonally adjusted exports fell in September, mainly because of a decline in iron and agriculture exports. In July, seasonally adjusted imports fell. This decline was widespread with only non-metallic imports advancing.

(1) Annual estimates are as of June 1. (2) Seasonally adjusted at annual rates. (3) Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period. (4) Rough cords of 128 cu. ft. (5) In urban areas of 5,000 population and over. (6) Average of weekly rates. (7) Middle of month. (8) Revised according to new bench marks. (9) This total includes all generating agencies producing over ten million kilowatt hours per year. (10) End of period. Including personal savings deposits.

(1) "De facto" population. Annual data are for June. (2) At current market prices. Annual data are totals of the four quarters. (3) Output of building and civil engineering work excluding the output of building operatives employed by private firms outside the building and civil engineering industries. (4) All manufactured products. (5) Exchange Equalisation Account holdings of gold and convertible currencies. Gold is valued at 250 s. per ounce fine, and currencies at parity, except the Canadian dollar which is valued at the appropriate rates.

4

Note.—Until the end of 1958, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1959 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

⁽¹⁾Not applicable to figures on population and immigration.

⁽²⁾Yukon and North-West Territories not included in figures for births, marriages and deaths.

⁽³⁾Estimates are given by years as of June 1 and by quarters for Canada.

⁽⁴⁾Exclusive of stillbirths.

⁽⁵⁾Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

NOTE: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1926-1956", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

⁽¹⁾The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item.

⁽²⁾Includes adjusting entry.

⁽³⁾Includes residual error of estimate.

⁽⁴⁾This item differs from column 5, bottom of page 6, in that it excludes

undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board.

Note: For a detailed description of concepts, sources and methods see D.B.S. Reference Paper (61-502) "Revised Index of Industrial Production, 1935-57."

9

⁽¹⁾The M.C.D. measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. For a fuller description see D.B.S. Reference Paper (61-502).

⁽¹⁾Seasonal (formerly supplementary) benefit data included.
lay-off are included.

⁽²⁾The number of new cases of recorded unemployment among insured persons.

⁽³⁾The number of calendar weeks during which a benefit payment was made.

⁽⁴⁾Estimates are based on average weekly number of

⁽⁵⁾Revised to relate to the Thursday nearest to the last day of the month.

⁽⁶⁾Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957-June 1958 which included fishing claimants.

⁽¹⁾As of July, 1957, the statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes.

⁽²⁾The annual and monthly "all industries" totals for 1957 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote (1).

⁽¹⁾In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values.

⁽²⁾Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlogs.

⁽³⁾Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys.

⁽⁴⁾Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period.

⁽¹⁾Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. ⁽²⁾Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ⁽³⁾Customs exports. ⁽⁴⁾Mill shipments destined for export.

Source: Monthly Report on Primary Iron and Steel—D.B.S.

Note.—The data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included.

⁽¹⁾Shipments for further processing within own firm and for sale in Canada.⁽²⁾Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

⁽¹⁾End of period.⁽²⁾Does not include apartment-type machines.⁽³⁾Electric and other.⁽⁴⁾Gas types are included.⁽⁵⁾In some cases

these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. Source: Monthly Reports, Domestic Electric Refrigerators, Domestic Washing Machines, Trade of Canada, and Radio and Television Receiving Sets, D.B.S.

*Construction of dwelling units.

Note.—These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely. The remainder of the country is covered on a sample basis.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1957 and 1958 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. ⁽¹⁾Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. ⁽¹⁾The coverage was extended to 507 municipalities in 1948, and as of 1959, stands at 1,014, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

*See also Tables 18 and 19.

⁽¹⁾Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1958 are final prices.

Since August 1, 1958, only initial prices are available for wheat, oats and barley.

⁽²⁾Include subsidy on hogs.⁽³⁾Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.⁽⁴⁾Previous to January, 1958, quotations referred to steers up to 1,000 lbs.

Now they refer to all weights.

⁽¹⁾Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. ⁽²⁾Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. ⁽³⁾Annual data are monthly averages of crop year. ⁽⁴⁾Includes eggs for hatching.

* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. ⁽¹⁾Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. ⁽²⁾Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. ⁽³⁾Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only. ⁽⁴⁾In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards. Balances were as follows:

	Sept. 1957-34	Dec. 1957-32	Mar. 1958-29	June 1958-31	Sept. 1958-39	Dec. 1958-35	Mar. 1959-32
⁽⁵⁾ Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds.							
⁽⁶⁾ Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

⁽¹⁾Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1957 and 1958 differ from the sum of the monthly data due to revisions which cannot be allocated by months. ⁽²⁾As of January, 1958, statistics include the British Columbia Electric Railway. ⁽³⁾As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system.

⁽¹⁾Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month.

⁽²⁾The September 30, 1957 and subsequent figures for 'personal savings deposits' exclude, and the figures for 'other notice deposits' include, the amount of \$140 million, being the deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes, which were reclassified at that time in the returns of the banks to the Department of Finance. The figures prior to September 30, 1957 are thus not comparable with those since that date.

⁽³⁾Mainly deposits of foreign banks. ⁽⁴⁾Capital, rest fund and undivided profits as at the latest fiscal year-end. ⁽⁵⁾Including issues payable in foreign currency. ⁽⁶⁾Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. ⁽⁷⁾Excluding Canadian day to day loans. ⁽⁸⁾Loans to grain dealers and exporters. ⁽⁹⁾Loans to finance purchase of Canada Savings Bonds at time of issue. ⁽¹⁰⁾Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. ⁽¹¹⁾Including loans to instalment finance companies.

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

⁽¹⁾The Canada totals by months for 1957 and 1958 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. The provincial monthly averages for 1957 have been revised to agree with the Canada total, but the provincial monthly figures have not. Neither the monthly averages nor the monthly figures for 1958 have been revised to agree with the Canada total.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction. Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

(2) Includes, in addition to the industries listed, Tobacco, Printing and Publishing and Allied Industries.

NOTE: Symbols used: Throughout the Review (...) means "not available"; (—) means "nil" or "less than can be shown with number of digits used"; (P) signifies "preliminary" and (r) indicates "revised". In some cases the annual data for 1958 and 1959 are provisional.

Manufacturing.....

Canada today is one of the world's leading manufacturing nations. Although it is only within recent decades that manufacturing has attained a position of pre-eminence, the industry's beginnings can be traced back more than 200 years.

More Canadians depend for their livelihood on manufacturing than on any other major industry; it accounts for close to 30% of all national production and is the leading industry in 7 of the 10 provinces.

A record 1,359,000 employees, working in some 37,900 manufacturing plants, were paid \$4,819,628,000 in salaries and wages in 1957, and the factory value of goods shipped was \$22,183,594,000. Cost of materials and supplies grossed \$11,900,752,000 and the value added in manufacturing processes totalled \$9,822,085,000.

DBS publications on manufacturing consist of a series of annual general reviews for Canada as a whole and for each province, about 120 annuals on individual industries and industry groups, and over 50 monthlies, quarterlies and semi-annuals on the production of certain commodities. Generally similar in character, the annual industry reports present data on number of plants, employees, salaries and wages, materials and supplies and selling value of shipments. Commodity detail is given for both shipments and materials used if publication does not reveal operations of a particular firm.

Monthly and annual reports are available from DBS on the following main groups—

- Foods, Beverages and Tobacco
- Chemicals
- Leather and Rubber
- Metals (Ferrous and Non-Ferrous)
- Paper Products and Printing
- Textiles and Apparel
- Machinery and Transportation Equipment
- Wood Products
- Electrical Equipment
- Non-Metallic Mineral Products
- Petroleum and Coal Products
- Miscellaneous Manufactures

A complete list of DBS publications is contained in the Catalogue of Current Publications 1959. Write for a free copy to: Information Services Division, Dominion Bureau of Statistics, Ottawa.

NATIONAL ACCOUNTS – INCOME AND EXPENDITURE

THIRD QUARTER 1959

The expansion in Gross National Product which has been in progress since early in 1958 slackened perceptibly in the third quarter of 1959 as the rate of advance in total final purchases of goods and services moderated. The increase in the value of Gross National Product of 0.3 per cent between the second and third quarters (seasonally adjusted), was the smallest quarter-to-quarter gain since the beginning of the business recovery. With prices fractionally higher, it is estimated that there was no change in the physical volume of production.

Conflicting movements in the main categories of expenditure in the third quarter operated to restrain the rise in demand and to check the expansion in real output. The increase in final demand was

very small; exports of goods and services (a highly irregular series), having advanced sharply in the second quarter, were unchanged in the third; government expenditure on goods and services dropped to a somewhat lower level; the rise in outlays for plant and equipment was more moderate and with a further decline in outlays for new housing, business fixed capital formation was not so expansionary as previously; personal expenditure on consumer goods and services was the only component of final demand where the trend was firmer in the third quarter. However, the accumulation of goods in inventory rose at a somewhat accelerated rate. With imports continuing to rise, a substantial part of the demand for final purchases and for inventory was met from foreign sources of supply.

Quarter-to-Quarter Changes in Selected Expenditure Components
(Seasonally adjusted at annual rates)

	1Q to 2Q 1959	2Q to 3Q 1959
	millions of dollars	
Personal expenditure.....	64	188
Government expenditure	124	-164
Residential construction.....	-8	- 32
Non-residential construction	40	8
Machinery and equipment	240	96
Exports	312	- 8
 Total final purchases	 772	 88
Shift in business inventories	-244	164
Change in imports	204	196
Change in G.N.P. (ex farm)	552	88

On the income side, the pattern of change in the third quarter was also rather mixed. Labour income, seasonally adjusted, rose only fractionally, while corporation profits edged slightly upward; the latter item has shown very little change over the course of the first nine months of this year after rising sharply in the last half of 1958. Net income of non-farm unincorporated business declined slightly, reflecting mainly the fall-off in the construction and retail trade groups. Net income received by farm operators from farm production was also down, as adjustment payments to farmers by the Canadian Wheat Board which were substantial in the second quarter were not repeated. Personal income showed little change and with direct personal taxes higher in the quarter by 3 per cent, disposable income was level with the second quarter. In spite of a 1 per cent advance in consumer spending, personal saving in the third quarter was running at an annual rate of \$1.8 billion, one of the highest rates of saving in several years.

While most of the statistical indicators for the third quarter of 1959 reflect the hesitation in the upward course of the economy, it is not possible to evaluate all of the factors which have contributed to this development. Of some importance in this country was the strike of 27,000 forestry workers in British Columbia, which had a major impact on production and income in both forestry and in durable goods manufacturing; the very small increase in labour income in the third quarter is largely attributable to the losses associated with this strike, as is the drop of one-half a percentage point in the index of industrial production. This production setback coincided with a decline in government purchases of goods and services in the third quarter and a levelling off of exports following the substantial increase in the second quarter. In the United States, the steel strike which began in mid-July was the major factor interrupting the course of the expansion and bringing about a decline of 1 per cent in Gross National Product in the third quarter. While

shortages of steel do not appear to have directly disrupted Canadian production programmes up to the end of the third quarter, the repercussions of the strike on the United States economy have probably influenced the climate and course of the business expansion in Canada. Moreover, shortages of steel have developed in Canada in recent weeks, and fourth quarter statistics not yet available will reflect the effects of this development. Finally, quite apart from the effects of labour disputes in both Canada and the United States, the historical record suggests that periods of hesitation are not uncommon during the course of an expansionary phase.

In the first nine months of this year, Gross National Product has averaged 7 per cent above the

same period of 1958.¹ With final product prices higher by about 2 per cent in this comparison, the physical volume of output has shown an increase of about 5 per cent. This compares with virtually no change in the physical volume of output in both 1957 and in 1958, and a post-war average for the years 1947 to 1958 of 4 per cent per year.

The increase in output in 1959 has been accompanied by broad changes in the composition of the nation's income and outlay. Over the course of the past year, reversals in trend have occurred in a number of major categories of demand, and the pattern of the nation's total expenditure has shown a marked change. The following table provides some perspective on the nature and magnitude of these shifts in terms of year-to-year percentage changes.²

Changes in Components of Gross National Expenditure

	Percentage changes	
	1957 to 1958	First 3 quarters 1958 to First 3 quarters 1959
Personal expenditure	5.2	6.0
Government expenditure	7.2	5.3
Residential construction.....	25.1	0.9
Non-residential construction	- 9.3	-2.4
Machinery and equipment	-17.7	9.8
Exports	- 1.6	4.6
Total final demand.....	2.3	5.1
Inventories	(\$-0.6 b.)	(\$+0.7 b.)
(Business only)	(\$-0.6 b.)	(\$+0.5 b.)
Imports.....	-5.6	9.5
Gross National Product.....	2.3	7.1

Business inventories have swung around from a position of heavy liquidation in 1958 to one of moderate accumulation in 1959; the turn-around here has been the equivalent of about \$0.5 billion in terms of new demands on production. The downward trend in business capital expenditure for new plant and equipment, which was moderating in the latter part of 1958, has been reversed, and outlays by the business sector are now providing a stimulus to the advance in final demand. Whereas between 1957 and 1958 total plant and equipment expenditures declined by about 13 per cent, in the first three quarters of 1959 total plant and equipment outlays have been running at a rate about 3.2 per cent above the same period one year earlier. On the other hand, outlays for new housing, which rose very sharply in 1958, by 25 per cent, have been

moving downward through the first three quarters of 1959; for the year thus far they have been at an average rate very close to the first nine months of 1958. Imports of goods and services, which fell sharply during the recession period, have been rising since the latter part of 1958; in the first three quarters of 1959, they were running about 10 per cent above the same period a year earlier. Personal expenditure on goods and services has shown a

¹ This comparison includes the value of the 1959 grain crop, which is estimated to be very slightly above the year 1958. However, the full effect of adverse weather conditions which delayed grain harvesting in the Prairie Provinces cannot yet be evaluated. It is assumed that the part of the crop now under snow will be harvested in the spring and will be of average quality.

² Comparisons of the three quarters of 1959 with the three quarters of 1958 are based on data unadjusted for seasonality.

slightly greater increase in 1959 than in the earlier comparison, and with prices up more moderately, the volume of consumption has shown a more pronounced gain than in 1958. However, government expenditure on goods and services has risen less sharply this year, by only 5 per cent compared with 7 per cent in 1958. Taken together, these shifts in the pattern of the nation's total expenditure have produced a Gross National Product in 1959 which has so far averaged about 7 per cent above the level of the first nine months of 1958, compared with a gain of only 2 per cent between 1957 and 1958.

The flow of income to the personal, business, and government sectors has also been marked by changes in the trend of important income components and by shifts in the compositional pattern of the income aggregates. Transfer payments, which rose by 27 per cent between 1957 and 1958, made a much smaller contribution to the gain in personal income in 1959. The reverse is true of labour income, which showed only a small change between 1957 and 1958

but rose sharply in 1959, accounting for a much greater proportion of the increase in total personal income than in the previous year. While corporation profits have shown little change over the first three quarters of 1959, they were at an average rate about 20 per cent above the same period one year earlier; this compares with a decline of 3 per cent in 1958.

The shift in the pattern of profits, labour income, and transfer payments has been largely responsible for the differing rates of change between national income and personal income in the two periods. In 1958, national income was affected by the small rise in labour income and the drop in profits, and showed only a 3 per cent gain; personal income advanced by 6 per cent, reflecting the sharp rise in transfer payments. In 1959, however, with profits and labour income showing substantial gains and transfer payments moderating, the advances in national income and in personal income have been closely in line.

Analysis of Changes in Major Income Components

Selected personal and business income components	Percentage changes	
	1957 to 1958	First 3 quarters 1958 to First 3 quarters 1959
Wages, salaries, and supplementary labour income	2.7	7.9
Transfer payments	27.0	7.0
Personal income	5.9	7.2
Corporation profits	-2.8	20.3
Rents, interest, and miscellaneous investment income.....	6.4	7.7
Net income of non-farm unincorporated business	5.4	2.9
Accrued net income of farm operators from farm production	16.2	3.5
National income.....	3.4	7.6
Selected government revenues (All levels of government)		
Direct personal taxes	-6.6	15.3
Corporation tax liabilities	-3.5	20.8
Indirect taxes.....	0.9	9.2

The current period of expansion has been characterized by a marked recovery in the tax revenues collected by or accruing to the government sector, reflecting the recovery in profits, higher employment and earnings, a higher level of imports, sales and shipments, and increases in tax rates. The changes in government revenues from the three major tax sources for all levels of government combined are shown in the table above.

Value, Volume, Price Comparisons

Taking the change in the price of all components together, it is estimated that the price element

of total Gross National Expenditure was higher in 1959 by about 2 per cent. The value, volume and price components of each of the main expenditure categories are shown in the accompanying table.

It will be apparent that final product prices have continued to drift upward slightly between 1958 and 1959, and that in the over-the-year comparisons, the advance has been about the same as that which occurred between 1957 and 1958. The rise in the price of consumer goods and services in 1959 was small, and amounted to less than half the price rise of the 1957-1958 period, but this development was accompanied by a somewhat larger

Percent Changes, Value, Volume and Price

	First 9 months 1959 First 9 months 1958			Price change ¹
	Value	Volume	Price ¹	Year 1958 Year 1957
Personal expenditure	6.0%	4.8%	1.1%	2.5%
Goods	5.3	5.1	0.3	1.8
Non-durable	4.5	4.8	-0.1	2.0
Durable	8.3	6.1	2.0	1.4
Services	7.3	4.3	2.9	3.6
Government expenditure	5.3	2.1	2.4	2.4
Gross fixed capital formation	2.6	-0.4	3.0	2.2
New residential construction	0.9	-3.1	4.2	2.5
New non-residential construction	-2.4	-5.1	2.6	1.2
New machinery and equipment	9.8	7.0	2.6	2.7
Exports of goods and services	4.6	2.2	1.5	-0.4
Imports of goods and services	9.5	10.1	-0.4	1.1
Gross national expenditure	7.1	4.7	2.2	2.1

¹ The price comparisons shown above are based on a set of fixed weight price indexes (1955=100), and not upon the implicit price deflators which can be derived by dividing the value series by the volume series. The latter are weighted by changes in the expenditure pattern over time. A specially constructed set of fixed weight price indexes has therefore been used for purposes of depicting price changes in the above table.

increase in the price of capital goods and in exports. Prices of imported goods declined, reflecting for the most part a more favourable rate of exchange on the Canadian dollar.

Production and Employment

As has been noted, the expansion in the physical volume of production which has been in progress for several quarters, was interrupted in the third quarter of 1959. Seasonally adjusted production data reflect, in general, small and largely offsetting movements between the second and third quarters of 1959. One of the contributing factors to this pause in overall expansion was the major work stoppage in the primary wood and wood fabricating industries in British Columbia. It is probable that durable manufacturing, which declined by 1.5 per cent in the third quarter, would have shown some increase had the wood industries not been so affected. The iron and steel group, and non-metallic mineral products showed a continued and substantial advance. However, there were weaknesses in other segments of durable manufacturing production in the third quarter, notably non-ferrous metals and transportation equipment. Non-durable manufacturing was also off, by 0.6 per cent, with decreases reflected in nearly every major industry component, including foods, tobacco, rubber products, textiles and clothing, and products of petroleum and coal. There were some losses outside of manufacturing as well; construction showed some decline, while trade and some of the other service producing in-

dustries reflected fractional losses. On balance neither the total goods nor the total services producing industries reflected any significant change in the third quarter.

In a comparison of the first three quarters of this year with the same period of 1958, overall real output was higher by about 5 per cent; this increase reflects gains in all major industry groups with the exceptions of construction and fishing. In spite of the losses in these two groups, however, the total output of goods producing industries rose in excess of 5 per cent. Total service industry volume was up somewhat less than 5 per cent in total and reflected gains of about this same amount in all group components.

Among the primary industries to reflect gains, agriculture showed the smallest increase (about 4½ per cent); this estimate is based on the assumptions that the crop now under snow in the west will be harvested and will be of average quality. Mining production was up nearly 9 per cent in spite of decreases in gold, zinc and coal, the latter being off about 10 per cent. The most substantial gains within mining occurred in the output of iron ore (20 per cent), uranium (25 per cent), natural gas (27 per cent), crude petroleum (12 per cent) and asbestos (13 per cent). The completion of major pipeline distributing facilities has been the basic factor in the sharp rise in output of natural gas. Electric power utility operation rose a more moderate 9 per cent. Primary forest operations showed an increase of 7 per cent over the previous year.

Manufacturing production in the first three quarters of 1959 was 6.7 per cent higher than in the same period of 1958; durable manufacturing rose 7.0 per cent and non-durables advanced 6.4 per cent. While there was significantly lower production in some individual industries, every major industry group either registered some increase in output or showed no change. The highest rates of increase were in rubber products (23 per cent), textiles (16 per cent), iron and steel (15 per cent) non-metallic mineral products (12 per cent) and products of petroleum and coal (12 per cent). Although the year 1959 reflected widespread gains over 1958 levels, on a seasonally adjusted basis the manufacturing index in the third quarter was at approximately the same level as the fourth quarter 1956 peak. In this same comparison, non-durable manufacturing was above the peak by about 6 per cent, but durables were still below it by 7 per cent.

Turning to consider the trends in employment associated with the changes in production described above, the fractional decline in non-farm output in the third quarter was accompanied by a further expansion in employment. The number of persons with jobs in the non-farm sector averaged 5,233 thousand, about 1½ per cent higher than in the second quarter, on a seasonally adjusted basis. That segment of employment covered by the industrial composite index remained unchanged.

In the first nine months of 1959, the total number of persons with jobs averaged 5,853 thousand, about 2½ per cent higher than in the same period of 1958; those with jobs in the non-farm sector averaged 5,147 thousand, about 3.5 per cent higher than a year earlier. These gains in employment compare with increases in total and in non-farm output of slightly more than 5 per cent, which implies an improvement in output per worker between the two periods. The number of persons without jobs and seeking work fell from 6.8 per cent of the labour force in the first nine months of 1958 to 5.9 per cent in the same period of this year.

Gross Fixed Capital Formation

The present estimates of gross fixed capital formation incorporate a number of revisions to data for the first and second quarters of 1959. Owing to a change in field reporting procedures, the number of housing completions in the first half of 1959 was under-stated, and a substantial upward revision to the housing figures has been made to take account of the under-estimate. At the same time, the second quarter estimate for non-residential construction has been scaled downward by roughly one-half of the amount of the upward revision to the housing figure. More recent information on commodity imports indi-

cates that business outlays for new machinery and equipment were higher in the second quarter than originally estimated, and this figure has been revised upward. With these revisions incorporated, the advance in total plant and equipment outlays between the first and second quarters, seasonally adjusted, is estimated to be about 5 per cent. The advance has continued into the third quarter, although at a more moderate rate. Housing outlays in the third quarter continued to edge downward.

Present National Accounts estimates of outlays for new housing indicate that in the first nine months of this year the value of housing put in place has been at an average rate very close to last year's annual figure of \$1.8 billion. The upward trend in housing starts which began early in 1957 was reversed in 1959 following a reduction in government aid to housing in the first part of the year, and as competing demands for private credit affected the level of activity in the industry. With an increase in government aid in the fourth quarter, it appears that the value of housing in 1959 will approximate the level suggested by the mid-year forecast of investment intentions last June.

Non-residential construction in the first nine months of this year has been running at an average rate very slightly below last year's annual total of \$2.8 billion, and the figures have shown a slightly rising trend since the beginning of the year. At the present time, the estimates are running closely in line with the mid-year forecast which suggested that the level of non-residential construction in 1959 would be about 1.5 per cent below the 1958 figure.

Outlays for machinery and equipment, which have been on a rising trend since the middle of 1958, have been running at an average rate close to 10 per cent above last year's annual figure in the first three quarters of 1959. Imports of machinery and equipment have been rising vigorously, particularly in the second quarter when they advanced by 17 per cent; on average the import content of investment in machinery and equipment has varied between 40 and 50 per cent of the total. At the present time, the National Accounts quarterly estimates of machinery and equipment are running considerably ahead of the mid-year forecast, although the record suggests a tendency for the quarterly estimates to over-state the survey results in this area.

Investment in Business Inventories

An accelerated rate of investment in business inventories was an important supporting element to the level of economic activity in the third

Change in Business Inventories
(Seasonally adjusted at annual rates)

	1st quarter	2nd quarter	3rd quarter
	millions of dollars		
Manufacturing.....	84	-44	148
Wholesale.....	-12	152	28
Retail.....	292	4	136
Other.....	40	48	12
Total.....	404	160	324

quarter. The build-up of stocks rose to an annual rate of \$324 million, twice as high as in the second quarter but below the level of the first quarter.

The increased accumulation took place in manufacturing industries and retail trade; in wholesale trade the rate of re-stocking was sharply reduced. In all three groups the ratio of stocks to shipments or sales was slightly higher than at the end of the previous quarter.

Manufacturing industries, which had been liquidating stocks in the second quarter, shifted to a moderate rate of accumulation in the third. All of the build-up took place in the durable goods industries, particularly in iron and steel, wood, and transportation equipment; however, stocks of non-ferrous metals continued to be depleted, but at a lower rate. Among the non-durable group, the food and petroleum industries built up stocks moderately, but liquidation took place in the group as a whole.

Retailers, whose stocks had shown little change in the second quarter, built up their inventories considerably in the third. A major part of this accumulation was in the hands of motor vehicle dealers, reflecting the decline in sales of new passenger cars, and a higher level of imports of European and British models. The rest of the accumulation in retail trade was mainly in stocks of food and apparel.

The modest accumulation of stocks in wholesale trade was mainly in machinery and equipment and iron and steel.

During the first three quarters of 1959 business inventories have been built up at an annual rate of \$0.3 billion, in contrast to a liquidation of \$0.3 billion in the year 1958. This shift amounts to an additional demand on domestic production and imports of \$0.6 billion.

Exports and Imports of Goods and Services

Exports of goods and services, which had risen sharply in the second quarter of 1959, remained virtually unchanged in the third quarter. The estimate of \$6.6 billion for the total, seasonally adjusted at annual rates, involves about the same distribution between receipts from goods and receipts from services as in the second quarter. The pattern of merchandise exports was somewhat altered between the two quarters, with significantly lower shipments of wood and wood products and animal products offset by increased sales of non-ferrous metals and some other groups, on a seasonally adjusted basis.

Imports of goods and services continued to rise for the fifth successive quarter, reaching a seasonally adjusted annual rate of \$8.1 billion, 2½ per cent higher than in the preceding period. Merchandise trade and service transactions were of equal importance in accounting for the increase in total payments. The increases in merchandise trade were fairly general for most groups and followed fairly closely the pattern of widespread gains characteristic of the first half of the year.

In consequence of the movements described above, the deficit on current international account rose to an annual rate of \$1.5 billion, a little more than \$200 million higher than in the second quarter, and \$400 million above the 1958 average.

Turning to consider the changes in external transactions in the first nine months of the year, the outstanding development is the growth in the size of the deficit. The excess of payments over receipts rose from \$0.8 billion to \$1.1 billion. Of this deficit, \$0.7 billion arises from non-merchandise items, which is not markedly higher than in the same period of 1958. Thus the major part of the change between this year and last is attributable to an increase in merchandise imports without a commensurate expansion in merchandise exports.

Merchandise exports in the first nine months of the year were above those of the same period of 1958 by 3 per cent. Trends in important commodities diverged widely. Gains occurred in shipments of several forest products, uranium, iron ore, farm machinery and asbestos, while sales of wheat and other grains, cattle, nickel, aluminum, crude petroleum and aircraft declined.

Reflecting the progress of recovery in Canada, merchandise imports in the first eight months of the year were 11 per cent higher than in the same period a year ago. Gains were widespread among the various commodity groups. Imports of producers' materials responded to the higher level of industrial production and significant increases occurred in industrial machinery and equipment. Farm implements, automobiles, and many consumer goods were also prominent among the items recording gains.

Government Expenditure on Goods and Services

Government expenditures on goods and services fell to a seasonally adjusted annual rate of \$6.4 billion in the third quarter, 2.5 per cent lower than in the second quarter. This total is the result of an estimated drop in Federal Government expenditures of approximately 5 per cent and an increase of 3 per cent in the combined expenditures of provincial and municipal governments.

Federal Government expenditures both for defence and other purposes dropped in the third quarter, the major part of this decline being in defence outlays. An important factor in the decline in non-defence expenditures was a smaller accumulation of inventories held by the Agricultural Stabilization Board. The decline in defence expenditures reflected lower procurement of a variety of defence items.

In the nine months' comparison, government expenditures were higher by about 5½ per cent. Most of this increase was in the expenditures of provincial and municipal governments. The decline of 5 per cent in defence expenditures partially offset a substantial rise in non-defence expenditures, leaving Federal Government outlays for goods and services higher by 2 per cent.

Personal Expenditure on Consumer Goods and Services

Consumer expenditure continued to rise in the third quarter, reaching a seasonally adjusted annual rate of \$22.2 billion, nearly 1 per cent higher than in the second quarter. Gains in consumer spending have all been modest thus far this year but the third quarter change was somewhat larger than in the preceding quarter.

All of the third quarter advance in personal expenditure is attributable to services since the expansion in outlays for non-durable goods was fully offset by a decline in purchases of durable goods.

The increase in outlays for non-durable goods in the third quarter amounted to 1 per cent. Increases occurred in purchases of food, clothing, and items related to automobile transportation, partially offset by lower purchases of other non-durable goods.

Spending on durables fell by 4½ per cent in the third quarter, the main element being a 9 per cent drop in purchases of new and used cars. Purchases of furniture and appliances also declined, although to a lesser degree.

The increase in expenditure on services in the third quarter was more than 2 per cent. The second quarter estimate for this category was unusual by reason of a big decline in net expenditures abroad. Disregarding the effect of changes in net expenditure abroad, the increase in expenditure on services in the third quarter was over 1 per cent, which is more or less in line with the quarter-to-quarter increases characteristic of this category in recent years.

In the first three quarters of the year consumer expenditure was 6 per cent higher than in the same period of 1958, of which 1 per cent represents higher prices. This implies a considerable increase in real per capita consumption, the first significant year-to-year gain since 1956.

The nine months' comparison shows a shift in the pattern of expenditure toward durables and services and away from non-durables. Purchases of durables rose more than 8 per cent, of services more than 7 per cent and of non-durables 4½ per cent.

The rise in consumer spending has fallen short of the increase in disposable consumer income in the nine months' comparison, thus continuing the tendency for high rates of personal saving which was a notable development last year.

Labour Income

Labour income in the third quarter is estimated at \$17.7 billion at seasonally adjusted annual rates, fractionally higher than in the second quarter. This small increase is partly a reflection of the incidence of industrial disputes during the summer months. Thus by September, when the strike in the woods industry in British Columbia had been settled, labour income had risen to a seasonally adjusted annual rate of \$17.9 billion. The changes in labour

income in the major industries were small and virtually offsetting; forestry, where income fell sharply, was an important exception.

In the first nine months of the year labour income was higher than a year ago by 8 per cent. In the same comparison, the number of employed paid workers, as measured by the Labour Force Survey, increased by 3.5 per cent. At the same time, the work week has lengthened a little, as evidenced by a 1 per cent increase in hours of work in manufacturing. Thus, an appreciable part of the growth in labour income in 1959 reflects the continued upward trend of wage rates.

All industries except fishing and trapping recorded gains in the nine months' comparison. The increases continued to be relatively large in the service producing group. For example, the rise in labour income in services proper¹ amounted to about 14 per cent, one of the largest recorded in any industry. Labour income in manufacturing rose by about 5 per cent. In mining, where the level of employment was significantly lower than a year ago, labour income rose only 3 per cent.

Corporate Profits

Corporate profits as estimated for National Income purposes, that is, after deduction of dividends paid abroad, rose slightly in the third quarter. At \$2.9 billion, this component was 2 per cent higher than in the second quarter. However, dividends paid abroad were considerably lower; corporate profits, including dividends paid abroad, were virtually unchanged. The sharp increases in corporate profits in the last two quarters of 1958 had come close to restoring the peak level reached in the third quarter

¹ Including community, business, personal and recreational services.

of 1956. Thus far in 1959 profits have held close to the relatively high level reached at the end of last year.

Among the manufacturing industries, profits in iron and steel and wood and paper products showed wide swings between the second and third quarters. Profits in iron and steel were presumably favourably affected by the work stoppage in the United States steel industry while the strike in the logging and lumbering industry in British Columbia adversely affected profits in wood and paper products. Profits were also down significantly in the food and beverage, and textile divisions of manufacturing, as well as in retail trade. Changes in amounts of capital cost allowances charged affected the profits of particular industries. This was a factor in the fairly pronounced rise in profits in mining, quarrying and oil wells, and also in the equally pronounced decline in profits in transportation, communication and storage. Including capital cost allowances, profits in these industries were relatively unchanged.

The first nine months' comparison clearly reveals the effect of business recovery on the level of corporate profits. Almost all industries contributed to the 20 per cent gain in total. Within manufacturing, increases were general, with gains of 40 per cent in textile products; 34 per cent in iron and steel; 23 per cent in chemical products; 17 per cent in electrical apparatus and supplies; and 17 per cent in wood and paper products. While profits in mining, quarrying and oil wells recovered some lost ground (up 23 per cent), they were still well below the level of 1956. The highest rate of increase in any major industry group, about 42 per cent, was in transportation, communication and storage, a contributing factor in this increase being the new facilities for the transmission of oil and gas.

INDUSTRIAL PRODUCTION

In October the seasonally adjusted index of industrial production rose sharply. The strength exhibited in manufacturing production more than compensated for the marginal decline in mining and the lack of movement in the electricity and gas component. Within manufacturing, all the major components of durable manufacturing registered gains with the exception of non-metallic minerals, while most of the non-durables rose or declined marginally.

EMPLOYMENT AND AVERAGE HOURS WORKED

The October index of industrial composite employment declined fractionally. Within manufacturing, the durable component failed to register an increase over its September level. Non-durable employment was stable, as was mining. Employment in construction has shown little movement over the last six months. The marginal decline in durable and non-durable average hours worked was reflected in the October decline in total average hours worked per week.

LABOUR INCOME AND FARM CASH INCOME

Seasonally adjusted total labour income rose sharply in October with agriculture, forestry and manufacturing contributing most of the strength. October was the first month to feel the full impact of the termination of the forestry strike on the West coast.

RETAIL TRADE*

The large increase in the level of retail trade during October can be traced to the substantial gain in motor vehicle dealer sales. Most other retail outlets registered marginal increments or remained unchanged, however there was a strong upward movement in department store sales.

⁽¹⁾Averages of unadjusted data.⁽²⁾Source: Sales of New Motor Vehicles and Motor Vehicle Financing.

*The current revision employs an improved shopping day adjustment to the raw data prior to seasonal adjustments. In addition to correcting for variations in the number of shopping days in different months, each day of the week is weighted according to the percentage of weekly sales normally transacted on that day for that store type. Sales may differ between months not only because months vary in length, but also because the number of Fridays and Saturdays differ. Shopping tends to be concentrated on these days.

SELECTED GROUPS IN RETAIL TRADE

In October seasonally adjusted new passenger car sales moved up sharply under the full impact of the release of 1960 models. Clothing stores showed little change, while furniture and appliance stores exhibited some strength.

⁽¹⁾Averages or totals of unadjusted data.⁽²⁾Seasonally adjusted at annual rates.⁽³⁾Three-term moving average of seasonally adjusted data.

*Seasonal adjustment computed by Central Mortgage and Housing Corporation.

EXPORTS, IMPORTS AND CORPORATION PROFITS

In October seasonally adjusted exports rose sharply. Agriculture, wood, non-ferrous metals and iron components showed strong gains. From September to October, seasonally adjusted imports remained unchanged.

(1) Annual estimates are as of June 1. (2) Seasonally adjusted at annual rates. (3) Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period. (4) Rough cords of 128 cu. ft. (5) In urban areas of 5,000 population and over. (6) Average of weekly rates. (7) Middle of month. (8) Revised according to new bench marks. (9) This total includes all generating agencies producing over ten million kilowatt hours per year. (10) End of period. Including personal savings deposits.

(1) "De facto" population. Annual data are for June.

(2) At current market prices. Annual data are totals of the four quarters.

(3) Output of building

(4) and civil engineering work excluding the output of building operatives employed by private firms outside the building and civil engineering industries.

(5) manufactured products.

(6) Exchange Equalisation Account holdings of gold and convertible currencies. Gold is valued at 250 s. per ounce fine, and currencies at parity, except the Canadian dollar which is valued at the appropriate rates.

Note.—Until the end of 1958, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1959 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

⁽¹⁾Not applicable to figures on population and immigration. ⁽²⁾Yukon and North-West Territories not included in figures for births, marriages and deaths. ⁽³⁾Estimates are given by years as of June 1 and by quarters for Canada. ⁽⁴⁾Exclusive of stillbirths. ⁽⁵⁾Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

NOTE: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1926-1956", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

8 ⁽¹⁾The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item. ⁽²⁾Includes adjusting entry. ⁽³⁾Includes residual error of estimate. ⁽⁴⁾This item differs from column 5, bottom of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board. Source: Quarterly Reports; National Accounts, Income and Expenditure, D.B.S.

Note: For a detailed description of concepts, sources and methods see D.B.S. Reference Paper (61-502) "Revised Index of Industrial Production, 1935-57."

⁽¹⁾The M.C.D. measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. For a fuller description see D.B.S. Reference Paper (61-502).

⁽¹⁾Seasonal (formerly supplementary) benefit data included.

⁽²⁾On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included.

⁽³⁾The number of new cases of recorded unemployment among insured persons.

⁽⁴⁾Estimates are based on average weekly number of payments.

⁽⁵⁾The number of calendar weeks during which a benefit payment was made.

⁽⁶⁾Revised to relate to the Thursday nearest to the last day of the month.

⁽⁷⁾Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957-June 1958 which included fishing claimants.

⁽¹⁾As of July, 1957, the statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes.

⁽²⁾The annual and monthly "all industries" totals for 1957 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote (1).

⁽¹⁾Includes copper fine in ore, ingots, bars, billets, rods, strips, sheets and tubing.⁽²⁾Includes ingots, bars and billets.⁽³⁾Includes nickel in matte

or speiss, oxide and fine.

⁽⁴⁾Includes lead in ore and in pigs.

⁽¹⁾In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values.

⁽²⁾Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlogs.

⁽³⁾Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys.

⁽⁴⁾Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period.

⁽¹⁾Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. ⁽²⁾Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ⁽³⁾Customs exports. ⁽⁴⁾Mill shipments destined for export.

Source: Monthly Report on Primary Iron and Steel—D.B.S.

Note.—The data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included.

⁽¹⁾Shipments for further processing within own firm and for sale in Canada.⁽²⁾Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

⁽¹⁾Includes some silvery pig iron formerly included with ferro-alloys. ⁽²⁾Excluding shipments for processing. ⁽³⁾Imports include, in addition to all other shapes, wire and wire rope. Imports exclude castings, forgings, fittings and couplings. ⁽⁴⁾Monthly average. ⁽⁵⁾Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

*Construction of dwelling units.

Note.—These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely. The remainder of the country is covered on a sample basis.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1957 and 1958 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. ⁽¹⁾Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. ⁽¹⁾The coverage was extended to 507 municipalities in 1948, and as of 1959, stands at 1,014, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

⁽¹⁾Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. ⁽²⁾Planks and boards, flooring and square timber. ⁽³⁾Hollow blocks including fireproofing and load-bearing tile. ⁽⁴⁾For building insulation only. ⁽⁵⁾Figures cover the production of firms which normally account for 85 per cent of the total for Canada. ⁽⁶⁾Includes concrete chimney blocks.

⁽⁷⁾Factory sales of firms which normally account for 96% of total Canadian production.

*See also Tables 18 and 19.

(1)Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1958 are final prices.

Since August 1, 1958, only initial prices are available for wheat, oats and barley. (2)Include subsidy on hogs. (3)Based on price for hogs including Dominion premium. A rise in ratio favours production of beef. (4)Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights.

⁽¹⁾Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. ⁽²⁾Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. ⁽³⁾Annual data are monthly averages of crop year. ⁽⁴⁾Includes eggs for hatching. Source: Coarse Grains Quarterly, Wheat Review and Trade of Canada, D.B.S.

* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available.

⁽¹⁾Conditional sale agreements held in connection with the financing of retail purchases of consumer goods.

⁽²⁾Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments.

⁽³⁾Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only.

⁽⁴⁾In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards.

Balances were as follows:

Dec. 1957-32	Mar. 1958-29	June 1958-31	Sept. 1958-39	Dec. 1958-35	Mar. 1959-32	June, 1959-36
--------------	--------------	--------------	---------------	--------------	--------------	---------------

⁽⁵⁾Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds.

⁽⁶⁾Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

⁽¹⁾Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1957 and 1958 differ from the sum of the monthly data due to revisions which cannot be allocated by months. ⁽²⁾As of January, 1958, statistics include the British Columbia Electric Railway. ⁽³⁾As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system.

⁽¹⁾Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. ⁽²⁾The September 30, 1957 and subsequent figures for 'personal savings deposits' exclude, and the figures for 'other notice deposits' include, the amount of \$140 million, being the deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes, which were reclassified at that time in the returns of the banks to the Department of Finance. The figures prior to September 30, 1957 are thus not comparable with those since that date. ⁽³⁾Mainly deposits of foreign banks. ⁽⁴⁾Capital, rest fund and undivided profits as at the latest fiscal year-end. ⁽⁵⁾Including issues payable in foreign currency. ⁽⁶⁾Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. ⁽⁷⁾Excluding Canadian day to day loans. ⁽⁸⁾Loans to grain dealers and exporters. ⁽⁹⁾Loans to finance purchase of Canada Savings Bonds at time of issue. ⁽¹⁰⁾Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. ⁽¹¹⁾Including loans to instalment finance companies.

⁽¹⁾Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks. ⁽²⁾Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada. ⁽³⁾Less total float, i.e. cheques and other items in transit (net). ⁽⁴⁾At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about \$140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date. Source: Statistical Summary of Bank of Canada.

Note.—This series gives total new settled for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

⁽¹⁾The Canada totals by months for 1957 and 1958 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. The provincial monthly averages for 1957 have been revised to agree with the Canada total, but the provincial monthly figures have not. Neither the monthly averages nor the monthly figures for 1958 have been revised to agree with the Canada total.

⁽¹⁾Ordinary, Industrial and Group. ⁽²⁾Part of the apparent increase between 1957 and 1958 is due to a change in the "inflation" factors used to bring figures of reporting firms up to the estimated total level for all insurance companies. Source: The Canadian Life Insurance Officers Association.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction. Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

(2) Includes, in addition to the industries listed, Tobacco, Printing and Publishing and Allied Industries.

FOREWORD

This is the fourth volume in the series of biennial supplements to the "Canadian Statistical Review". The present report supersedes previous issues which were published in December, 1953, December, 1955, and December 1957.

These supplements were initiated in response to demands from businessmen, economists and statisticians for a readily available and continuous record of current economic indicators. They contain three important features: first, they present in the form of monthly averages, from 1926 or the earliest year for which data are available, to the last complete year, the annual record of the 1,600 statistical series carried in the regular monthly issues of the "Canadian Statistical Review". This permits users of the statistics to locate historical figures without endless thumbing through back issues or maintaining extensive records. Secondly, except in certain specified cases, the annual and monthly data are comparable throughout the period covered, and incorporate all revisions which have been made since the publication of the 1957 Supplement. Thirdly, these reference volumes provide monthly data for a longer period than can be shown in the monthly bulletins, thereby permitting more extensive analysis of seasonal trends.

The 1959 Supplement presents, for most series, monthly or quarterly data from January 1956 through December 1958 or for a longer period where more space was available as a result of the lack of historical figures. Since the publication of the last Supplement, both monthly and annual data have been revised in several cases, so that, in the case of monthly and quarterly data, the figures for 1954 and 1955 as shown in the 1957 volume are not always strictly comparable with those for later years contained in the present report. An examination of the statistics for 1956, shown in both publications, will reveal the extent of changes for those series which have been altered during the past two years. The annual data are comparable throughout except where specifically noted.

In the 1959 Supplement, the fifty-nine series adjusted for seasonal variation which are published regularly in the monthly edition, are shown in this report for the period 1951-1958 on pages V to XI.

In addition, seasonally adjusted totals for the Gross National Product and the Index of Industrial Production appear in Tables 5 and 6 respectively, just as in the monthly publication.

Designed to be used in connection with the latest monthly issue of the Canadian Statistical Review, this volume presents the record of the more important monthly indicators from 1926 to date. Through the means of weekly supplements, subscribers are assured of receiving most of the current figures as soon as they are available. These supplements are supplied without charge to regular subscribers to the "Canadian Statistical Review".

The present volume was prepared by the National Income Section of the Research and Development Division of the D.B.S.

WALTER E. DUFFETT
Dominion Statistician

1959 BIENNIAL SUPPLEMENT

LIST OF STATISTICAL TABLES

Seasonally Adjusted Economic Indicators

Table	Page
Production	V
Employment and Income	VI
Retail Trade	VIII
Construction	X
Miscellaneous	XI

Introduction

1. Selected Economic Indicators: Canada	1
2. Significant Statistics of United Kingdom	4
3. Significant Statistics of United States	5
4. Population Statistics	7
5. National Accounts: Income and Expenditure:	
National Income and Gross National Product in Current Dollars, seasonally adjusted at annual rates	12
Gross National Expenditure in Current Dollars, seasonally adjusted at annual rates	13
National Income and Expenditure, seasonally unadjusted	14
Gross National Expenditure in Constant Dollars, seasonally unadjusted	15
Sources of Personal Income, seasonally adjusted at annual rates	16
Disposition of Personal Income, seasonally adjusted at annual rates	17
Sources and Disposition of Personal Income, seasonally unadjusted	18
6. Industrial Production: Volume Indexes	19
Volume Indexes adjusted for seasonal variation	26

Labour

7. Canadian Labour Income	33
8. The Canadian Labour Force	35
9. Employment and Earnings: By Industries	36
10. Employment and Earnings: By Provinces	43
11. Employment and Earnings: By Cities	46
12. Average Hourly Earnings	49
13. Average Hours Worked per Week	52
14. Percentage of Women in Reporting Establishments: By Industries	54
15. Unemployment Insurance	55
16. Time Lost in Labour Disputes	56

Prices

17. Retail Price Indexes	58
18. Wholesale Price Indexes	59
19. Selected Price Indexes	65

Fuel and Power

20. Electric Power:	
Net Generation, Exports and Total Made Available	66
Total Made Available By Provinces	67
21. Coal and Coke	68
22. Petroleum and Gas	69
23. Refined Petroleum Products	70

Mining

24. Metals	72
25. Non-Metallic Minerals	74

Manufacturing

26. Manufacturing Inventories, Shipments and Orders:	
All Manufacturing Industries	75
Shipments and Inventories Grouped According to Standard Industrial Classification	76
Shipments, Inventories and New Orders Grouped According to an Economic Use Classification	78
27. Tobacco and Beverages	81
28. Rubber	82
29. Leather:	
Hides and Skins and Production of Finished Leather	84
Production of Boots and Shoes	85
30. Primary Textiles	86
31. Production of Factory Clothing	87
32. Wood and Paper Products:	
Sawn Lumber	89
Wood Pulp and Newsprint	90
33A Shipments of Primary Iron and Steel Shapes to Consuming Industries	91
33B Primary Iron and Steel: Production and Shipments	93
34. Motor Vehicles: Production and Sales	94
35A Refrigerators and Washing Machines	95
35B Radio and Television Receiving Sets	96

LIST OF STATISTICAL TABLES – Concluded

Construction	
Table	Page
36. New Residential Construction	97
37. Value of Building Permits:	
By Municipalities	98
By Provinces	99
By Types	100
38. Building Materials	101
Food and Agriculture	
39. Principal Field Crops:	
Production	103
Acreage	104
40. Farm Cash Income	105
41. Grain Supply and Disposition	108
42A Inspected Slaughtering of Livestock and Cold Storage Holdings of Meat and Poultry	109
42B Selected Prices and Price Ratios: Livestock and Livestock Feeds	110
42C Exports of Grains and Livestock Products	111
43. Milk and Milk Products: Production, Stocks and Sales	112
44. Fish: Landings, Exports and Stocks	113
45. Manufactured Food:	114
Sugar	117
Domestic Trade	
46. Value of Retail Trade	118
47. Retail Sales and Stocks:	
Department Stores	120
Chain Stores	121
48A Retail Credit	122
48B Finance Company and Retail Dealer	123
Consumer Credit and Short-term Personal Loans:	
49. Wholesale Trade	124
External Trade	
50. Merchandise Exports: By Commodities	125
51. Merchandise Imports: By Commodities	129
52. Merchandise Exports and Imports: By Areas	133
53. The Canadian Balance of International Payments	135
Transportation	
54. Shipping and Aviation	136
55. Carloadings of Revenue	137
Freight on Canadian Railways:	
56. Operating Statistics of Canadian Railways	139
Finance	
57. Bank of Canada: Assets and Liabilities	141
58. Canadian Chartered Banks: Assets and Liabilities	143
59. Canadian Dollar Currency and Bank Deposits Held by the General Public	146
61. Cheques Cashed in Clearing House Centres	147
62A Life Insurance Sales	148
62B Benefit Payments of Life Insurance Companies	149
64. Index Numbers of Security Prices	150
65. Corporation Profits Before Taxes	151
66. Commercial Failures	152
67. Miscellaneous Financial Statistics	153

Notes: Symbols used throughout this report:

(..) means "not available."

(-) means "nil" or "less than can be shown with number of digits used."

Due to changes in classification and coverage it is not possible to obtain detailed historical data for Table 60 "Federal Government Budgetary Revenues and Expenditures" and Table 63 "Security Issues and Retirements."

In many cases, current data are subject to further revision.

Note: For explanatory notes and sources, see page 162.

EXPLANATORY NOTES AND SOURCES

SEASONALLY ADJUSTED ECONOMIC INDICATORS

Note: Throughout this section, annual figures are averages or totals of unadjusted data.

Production:

- ¹ Seasonally adjusted at annual rates.
- ² Gross National Product at Market Prices excluding Accrued Net Income of Farm Operators from Farm Production.

Employment:

- ¹ Employment indexes and average hours worked are compiled from data which relate to the last pay period of the month.
- ² Middle month in each quarter.
- ³ Percentage seasonally adjusted.
- ⁴ Revisions in the raw data for November, 1957 through June 1958 are not incorporated in this series.

Retail Trade:

- ¹ Source of basic data "New Motor Vehicle Sales and Motor Vehicle Financing".
- ² Includes "Men's Clothing", "Family Clothing" and "Women's Clothing".

Construction:

- ¹ Seasonal adjustment at annual rates computed by Central Mortgage and Housing Corporation.
- ² Three term moving average of seasonally adjusted data.

Miscellaneous:

- ¹ Seasonally adjusted at annual rates.
- ² End of quarter, annual figures are end of period (unadjusted).
- ³ Includes Finance Company and Retail Dealer Credit extended to consumers, balances outstanding.

INTRODUCTION

Table 1

- ¹ Annual data as at June 1st.
- ² Seasonally adjusted at annual rates.
- ³ Rough cords of 128 cu. ft. Annual averages from 1940 through 1957 were prepared by a revised method and are not exactly comparable with earlier years Newfoundland is included since 1949.
- ⁴ Annual data down to and including 1955, pertain to "Central Electric Stations" only, or establishments selling electric power. Annual data for 1956 and 1957, so far as possible, apply to all agencies generating electricity. The monthly figures for 1957 and 1958 are compiled on the same basis as the annual data for 1956 and 1957 except that they exclude generating agencies producing less than ten million kilowatt hours per year.
- ⁵ Manufacturing inventory owned by manufacturers held at plant or plant warehouse at end of period.
- ⁶ Annual averages for 1949 and subsequent years were compiled from data relating to the last pay period of each of the twelve months concerned. They are therefore not absolutely comparable with the annual averages for previous years, which include in each case the index for the last pay period of the previous December and exclude that for the last pay period for December of that year.
- ⁷ Before 1945, relates to week in month of highest employment. Since that date annual averages are based on the indexes for the last pay period of each month.
- ⁸ In urban areas of 5,000 population and over.
- ⁹ Held by general public at end of period, including personal savings deposits.
- ¹⁰ As at end of period.
- ¹¹ Average of weekly rates.
- ¹² Middle of month.

Table 2

- ¹ Annual data given are for June. Prior to 1940, and since 1951, the annual figures given represent the "de facto" population of the United Kingdom. From 1940 to 1950, inclusive, estimates refer to the total population including members of the forces serving overseas or merchant seamen at sea. In 1951 the mid-year estimate on this annual basis was 50,557 thousand.
- ² Annual data are for June. Prior to 1948, estimates excluded private indoor domestic servants and gainfully occupied persons over pensionable age, (men, 65; women, 60). Part-time women workers were counted as half units. The civil employment estimate for 1948 on the old basis was 19,064 thousand and the estimate of unemployed was 272 thousand.
- ³ At current market prices. Prior to 1946, data are unrevised and not strictly comparable to those of later years. Annual data are totals for the year, for 1956, 1957 and 1958 they are the sum of the four quarters.
- ⁴ This index is based on the minimum or standard rates of wages fixed by voluntary collective agreement, or the minimum rates fixed by Wages Regulation Orders in certain trades. The rates used are those for manual wage earners.
- ⁵ This index is designed to measure price changes over the "whole field of goods and services over which households distribute their expenditures" and is not designed, strictly speaking, as a "cost of living" index.
- ⁶ Now includes all manufactured products.
- ⁷ As of 1952, data take account of the increased valuation of parcel post.
- ⁸ Output of building and civil engineering work, excluding the output of building operatives employed by private firms outside the building and civil engineering industries. Includes building by operatives employed by public authorities, since the building industry is now defined according to the Standard Industrial Classification, the figures since 1955 are not strictly comparable with previous totals.
- ⁹ The 1956 monthly figures are not quite comparable with the 1957 monthly averages by quarters and the 1958 monthly figures.

Sources: "Monthly Digest of Statistics" and "Annual Abstract of Statistics", Central Statistical Office, London, England.

Table 3

- ¹ Including Armed Forces overseas. Prior to 1941, annual figures are mid-year estimates, thereafter they are monthly averages.
- ² Includes wage and salary disbursements and other labour income. Excludes employer contributions for social insurance.
- ³ Includes shipments under the mutual Security Program. Beginning with 1941, data include lend-lease exports. From 1947 onward army civilian supply shipments are included.
- ⁴ Annual figures are averages of the unadjusted data.
- ⁵ At book value. Annual data are the unadjusted December figures for each year.
- ⁶ Revised series beginning in 1948; not completely comparable with earlier years.
- ⁷ Production and related workers who worked during and received pay for the pay period ending nearest the 15th of the month. Covers both full-time and part-time employees, but not supervisory employees.
- ⁸ Data for 1939 and later years are not strictly comparable with earlier years.
- ⁹ Data for 1951 and subsequent years not comparable with those of earlier years. In 1951 the monthly average on the old basis was 12,748.
- ¹⁰ As at Wednesday, nearest end of the month. Coverage increased in 1952.
- ¹¹ Standard and Poor's Corporation Index broadened in coverage and recomputed on the base 1941-43=10.

Sources: "Monthly Survey of Current Business" and "Biennial Supplement to the Monthly Survey of Current Business". United States Department of Commerce. "The Handbooks of Basic Economic Statistics", Economic Statistics Bureau, Washington, D.C.

Table 4

Note: For the period 1926-1943 data for births and deaths are by place of occurrence. Since 1944 the data are on the basis of residence. Monthly data are by month of occurrence. Marriages are classified by place of occurrence throughout.

- ¹ National annual and monthly data for population, births, marriages and deaths include Yukon and the Northwest Territories. Although Newfoundland data on population, births, marriages and deaths are shown separately for the entire period, they are included in the Canada totals only since 1949.
- ² Annual estimates are as of June 1st.
- ³ Exclusive of stillbirths. Annual data are monthly averages.
- ⁴ Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.
- ⁵ Annual data are monthly averages.

Sources: Monthly Report "Vital Statistics", D.B.S. Annual Report: "Vital Statistics" D.B.S. Department of Citizenship and Immigration.

Table 5

Note: Throughout this table, Newfoundland is included as of 1949. In 1948, the last year before accession, Newfoundland's Gross National Product was about \$175 million.

- ¹ Excludes dividends paid to non-residents.
- ² This item includes the undistributed earnings of the Canadian Co-operative Wheat Producers and the Canadian Wheat Board and an inventory valuation adjustment for grain in these channels, on a calendar year basis. The seasonally adjusted data include an arbitrary smoothing of crop production and standard seasonal adjustments for livestock items. Because of the arbitrary elements, too precise an interpretation should not be given the seasonally adjusted figures of accrued net income of farm operators.
- ³ This item includes net income of independent professional practitioners.
- ⁴ The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued

INTRODUCTION—Concluded

Table 5—Continued:

- at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment.
- ⁵ Includes outlays on new durable assets such as building and highway construction by governments, other than government business enterprises. Also includes net purchases of government commodity agencies.
- ⁶ Includes capital expenditures by private and government business enterprises, private non-commercial institutions, and outlays on residential construction by individuals and business investors.
- ⁷ Excludes U.N.R.R.A. Mutual Aid and Military Relief.
- ⁸ Price indexes based on 1935-39 were used to deflate the period 1926-1947, while indexes based on 1949 were used to deflate the subsequent period from 1947 to 1958. The year 1947, above on a 1949 base was used as the year of overlap. The linking process produced residual differences, so that the entries above will not cross-add. For additional information please refer to the D.B.S. publication "National Accounts Income and Expenditure, 1926-1956".
- ⁹ This item differs from column 5 on pages 12 and 14 in that it excludes undistributed earnings (and the inventory valuation

Table 5—Concluded:

- adjustment) of the Canadian Co-operative Wheat Producers and the Canadian Wheat Board.
- ¹⁰ Includes all government debt interest paid to persons.
- ¹¹ Includes net expenditure abroad.
- Sources: Quarterly and annual bulletins: "National Accounts, Income and Expenditure", D.B.S. "National Accounts Income and Expenditure 1926-1956", D.B.S.

Table 6

- ¹ Prior to 1946 includes Biscuits and Confectionery.
- ² The M.C.D. measure indicates the number of months required, on average, for the emergence of the cyclical trend of a seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. For a fuller description see D.B.S. Reference Paper (61-502).
- Sources: Monthly Report "Canadian Statistical Review" D.B.S. D.B.S. Reference Paper (61-502). "Revised Index of Industrial Production, 1935-57".

LABOUR

Table 7

- ¹ As of 1949, Newfoundland is included.
- ² Includes Yukon, Northwest Territories and Canadian residents abroad.
- Sources: Monthly Report: "Estimates of Labour Income," D.B.S. and "National Accounts Income and Expenditure, 1926-1956", D.B.S.

Table 8

Note: These estimates are derived from a sample survey and are subject to sampling error. In general the smaller the estimate the larger is the relative sampling error. Data include Newfoundland in estimates from 1950, and exclude residents of the Yukon and Northwest Territories, members of the armed services, Indians on reservations and inmates of institutions.

Prior to 1946, estimates are given by years as of June 1st. From 1946 to 1952, annual figures are averages of quarterly surveys.

From 1953 to 1958, annual figures are averages of monthly surveys.

- ¹ Due to flood conditions, estimates for Manitoba for June, 1950, were based on previous experience rather than direct survey.

Sources: Monthly Report, "The Labour Force", D.B.S. Reference Paper No. 58. "The Labour Force" (Revised) D.B.S. Reference Paper "Canadian Labour Force Estimates, 1931-1945", (Revised) D.B.S.

Tables 9-11

Note: Data reported by firms customarily employing 15 persons or more. In Table 9, statistics for 1949 and subsequent years are compiled from data which relate to the last pay period of the month. For earlier years, data were related to the last pay period of the preceding month. Annual averages for the years prior to 1949 are therefore not strictly comparable with the annual averages for the later years.

In Tables 10 and 11, statistics for 1953 and subsequent years are compiled from data which relate to the last pay period of the month. For earlier years data were related to the last pay period of the preceding month. Annual averages for the years prior to 1953 are therefore not strictly comparable with the annual averages for the later years.

Newfoundland is represented as of 1949.

- ¹ Includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies and non-metallic mineral products.
- ² Includes foods and beverages, tobacco and tobacco products, rubber products, leather products, textile products, clothing, paper products, printing publishing and allied industries, products of petroleum and coal, chemical products and miscellaneous manufacturing industries.

Sources: Monthly Report: "Employment and Payrolls", D.B.S. and Annual Report: "Annual Review of Employment and Payrolls", D.B.S.

Tables 12 and 13

Note: Data are for wage-earners for whom establishments usually employing 15 persons and over keep record of hours actually worked, mainly hourly rated or production workers. Statistics throughout Tables 12 and 13 are compiled from data which relate to the last pay period of the month. Newfoundland is represented as of 1949.

- ¹ See note, 1, Table 9.

- ² See note 2, Table 9.

Sources: Monthly Report: "Man-Hours and Hourly Earnings, with Average Weekly Wages", D.B.S. and Annual Report: "Annual Review of Man-Hours and Hourly Earnings" D.B.S.

Table 14

Note: Newfoundland is represented as of 1949.

Source: Monthly Report: "Employment and Payrolls", D.B.S.

Table 15

- ¹ Seasonal (formerly supplementary) benefit data included.
- ² On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included.
- ³ The number of new cases of recorded unemployment among insured persons.
- ⁴ Estimates based on number of payment documents; prior to February 1955, data related to week containing last working day of month; commencing with February 1955 estimates are based on average weekly number of payments.
- ⁵ Commencing with October, 1955, the number of calendar weeks during which a benefit payment was made; prior to that date, payment was made on the basis of individual days, which have been converted into weeks for purposes of comparison at the rate of six days per week.
- ⁶ Since 1952 these series relate to the Thursday nearest to the last day of the month.
- ⁷ Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 28, 1957-June 5, 1958 which included fishing claimants.
- ⁸ Prior to 1952, data include deferred as well as current vacancies.

Sources: Monthly Report: "Statistical Report on the Operation of the Unemployment Insurance Act", D.B.S. Weekly Labour Report from Local Employment Offices, D.B.S. Reference Paper "Unemployment Insurance Claims, 1946-1955" D.B.S. and Labour Gazette, Department of Labour.

Table 16

- ¹ As from July 1957, the statistics for individual industries exclude strikes involving less than a hundred workers. The total for all industries continues to include all strikes.
- ² The annual and monthly "all industries" totals for 1957 have been revised and are no longer quite comparable with the data for individual industries apart from the difference described in footnote 1.

Sources: Labour Gazette, Department of Labour.

PRICES

Table 17

¹ This Index is available for January, April and August only.

Sources: Monthly Report: "Prices and Price Indexes", D.B.S. and "Price Index Numbers of Commodities and Services Used by Farmers", (Published 3 times per year) D.B.S.

Table 18

¹ Changed from silk fabrics to rayon fabrics in January, 1942.

² From 1926 to 1941 rayon yarns and artificial silk hosiery.

³ Gold is included from 1935.

⁴ Gasoline tax excluded from 1941 to 1946.

Source: Monthly Report: "Prices and Price Indexes", D.B.S.

Table 19

¹ Excludes gold.

² Index arithmetically converted from base 1935-39 = 100.

³ Excluding Newfoundland. The prices of western grains used prior to August 1958 are final prices. Since August 1, 1958, only initial prices are available for wheat, oats, and barley.

Sources: Monthly Report: "Prices and Price Indexes", D.B.S. "Non-Residential Building Materials Price Index, 1935-1952" "Price Index Numbers of Residential Building Materials 1926-1948", D.B.S.

FUEL AND POWER

Table 20

Note: Annual data on the former basis pertained to "Central Electric Stations" only, i.e. to firms which sold electric power. While most of these firms were utilities, a small number of industrial concerns which had some electric power available for sale were also included. Utilities are defined as companies, commissions, municipalities or individuals whose primary function is to sell most of the electricity which they have generated or purchased. Industrial establishments are defined as companies or individuals which generate electricity mainly for use in their own plants.

For 1956 and 1957, annual statistics were collected, as far as possible, for all agencies generating electricity, including both utilities and industrial concerns. Thus, statistics are now available, as from 1956, on the total production and distribution of electric power. The year 1956 is shown on both the new and the old bases, so as to indicate the magnitude of the change.

The monthly figures are compiled on the same basis as the revised annual data, except that they exclude generating agencies producing less than ten million kilowatt hours per year. An annual average of the monthly figures, therefore, gives a slightly smaller figure than that shown in the revised annual data.

In the annual figures, production and consumption data for the Yukon and the Northwest Territories are included in the Canada totals, with consumption data being included in the British Columbia totals. On a monthly basis, data for the Yukon and the Northwest Territories are included in the Canada totals only.

The annual surveys do not provide data on "secondary" power, which mainly consists of power used in electric boilers. The "secondary" totals in the annual section of the table are taken from the monthly survey, with primary power made available being a residual figure.

¹ Less imports.

² Total net generation less net exports.

Sources: Monthly Report: Electric Power Statistics; D.B.S. Annual Reports (up to 1956): Central Electric Stations; D.B.S. Annual Reports: Electric Power Statistics; D.B.S.

Table 21

¹ Includes Yukon.

² As of April 1949, Newfoundland data are included.

³ Monthly import data and 1958 annual data are based upon imported coal actually landed, while annual data down to 1957 represent the amounts cleared from customs ports.

Table 21—Concluded:

⁴ Annual computation to 1957 entails considerable adjustments in production and external trade as described on page 19 of the "Coal Mining" report for 1957.

Sources: Monthly Report: "Coal and Coke Statistics", D.B.S. Annual Report: "The Coal Mining Industry", D.B.S.

Table 22

¹ As of January, 1954 and January, 1955, a number of distributors not previously reported were added to the survey.

² Includes some free customers.

³ Includes gas used for house heating.

⁴ Barrels of 35 Imperial gallons.

⁵ Increases in natural gas sales and decreases in manufactured gas sales caused by transfer of large companies from manufactured to natural gas.

Sources: Monthly Reports: "Crude Petroleum, Natural Gas and Manufactured Gas", "Trade of Canada" (Imports) D.B.S. Annual Report: "Crude Petroleum and Natural Gas Industry", D.B.S.

Table 23

Note: In March, 1955, the method of reporting certain categories of refining operations was altered. However, the continuity of the series has been maintained, so far as possible.

¹ Prior to 1940 data refer to products made for sale.

² For some years prior to 1940 includes a small amount of aviation gasoline.

³ Prior to 1937, series represents production for sale of all fuel oils including stove oil. Beginning with 1937, stove oil is excluded. In 1937, the monthly average (including stove oil) comparable to previous years was 1,165 thousand barrels.

⁴ Prior to 1940, series used represent apparent domestic consumption. Data were computed from production, imports, exports and stocks at refineries. From 1940 to March 1955, data exclude a certain amount of imported fuels.

⁵ Prior to 1946, fuel oil data include stove oil; stove oil is excluded since 1946. Apparent sales of light fuel oils including stove oil in 1946 (comparable to previous years) are estimated at 1,045 thousand barrels.

⁶ Prior to 1946 series includes stove oil. In 1946, stocks of light fuel oils, including stove oil, are estimated at 3,198 thousand barrels.

⁷ As of January, 1957, includes tractor fuels.

Sources: Monthly Report: "Refined Petroleum Products", D.B.S. Annual Reports: "Refined Petroleum Products", "The Petroleum Products Industry", D.B.S.

MINING

Table 24

Note: Newfoundland is included in production figures as of 1949.

¹ Includes fine copper in ore, ingots, bars, billets, rods, strips, sheets and tubing.

² Includes ingots, bars and billets.

³ Includes nickel in matte or speiss, oxide and fine.

⁴ Includes lead in ore and in pigs.

Sources: Monthly Reports: "Silver, Lead and Zinc", "Gold", "Copper and Nickel", "Canada's Leading Minerals", "Trade of Canada", D.B.S. Annual Reports: "The Silver-Lead-Zinc Mining Industry", "The Nickel-Copper Mining, Smelting and Refining Industry", "The Gold Mining Industry", "The Miscellaneous Metal Mining Industry", D.B.S.

Table 25

¹ Contains a minor quantity used by plants reporting.

² Total salt and salt content of brine.

Sources: Monthly Reports: "Production of Canada's Leading Minerals", "Cement", "Trade of Canada", D.B.S. Annual Reports: "General Review of the Mining Industry", D.B.S.; "The Miscellaneous Non-Metal Mining Industry", D.B.S.

Separate annual reports for asbestos, gypsum, cement, salt and lime, D.B.S.

MANUFACTURING

Table 26

- ¹ In industries where long term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.
- ² Total new orders received during the period, at estimated selling values. The series cover total new orders, net of cancellations, regardless of whether the orders will be filled from stocks or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlogs.
- ³ Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys.
- ⁴ Prior to 1955, manufacturing inventories included finished goods owned by manufacturers held at "Trading Outlets", that is, any establishments operated by manufacturers, other than plants or plant warehouses, which carried stocks and made sales direct to customers. Since January 1955, inventories have included goods owned by manufacturers as held at the plants or plant warehouses only. During 1955 the value of such inventories held, at trading outlets, averaged approximately \$225,000,000. The "Inventories of Finished Products" series, from 1955 on, is therefore not comparable with previous years.

Source: Monthly Report of Inventories, Shipments and Orders in Manufacturing Industries, D.B.S.

Table 27

- ¹ Releases of domestically manufactured tobacco for consumption in Canada.
- ² End of period.
- ³ The production of beer is shown in thousand barrels of 25 gallons each. Commencing with April, 1949, Newfoundland is included.
- ⁴ Includes bottling of imported liquors.

Sources: Excise Division, Department of National Revenue. Quarterly Report: "Stocks and Consumption of Unmanufactured Tobacco", D.B.S.

Table 28

- ¹ Includes crude rubber, Gutta-percha unmanufactured, Latex and Balata crude.
- ² Excludes bicycle tires.
- ³ Includes small number of imported tires as of 1954.
- ⁴ Includes plastic footwear.

Sources: Monthly Reports: "Consumption, Production and Inventories of Rubber", D.B.S.; "Trade of Canada" D.B.S., Monthly reports of Rubber Association of Canada. Annual Report: "The Rubber Industry", D.B.S.

Table 29

- ¹ As of April, 1949, Newfoundland is included.
- ² Includes both glove and garment leather and shoe leather.
- ³ Newfoundland is included as of 1949. Annual data for 1952 through 1957 represent factory shipments.
- ⁴ Commencing with 1948, Little Gents Shoes are included with Misses and Children's rather than with Boys and Youths.

Sources: Monthly Reports: "Statistics of Hides, Skins and Leather" and "Production of Leather Footwear" D.B.S. Annual Report: "The Leather Footwear and Leather Boot and Shoe Findings Industries", D.B.S.

Table 30

- ¹ Data include estimate for non-reporting companies.
- ² Bales of 500 pounds gross weight.
- ³ Invoice weight.
- ⁴ Prior to 1953 figures represent production.
- ⁵ Annual data from 1953 represent shipments.

Sources: Cotton Institute; Canadian Woollen and Knit Goods Manufacturers Association; Silk and Rayon Institute; Report of the Royal Commission on the Textile Industry, 1938; Trade of Canada; Annual Report: "Synthetic Textiles and Silk Industry", D.B.S.

Table 31

Note: Annual data prior to 1950 are taken from annual Census of Industry reports. From 1950, annual and quarterly data are those given in the quarterly reports of Factory Clothing.

- ¹ Includes children's.
 - ² Includes boys.
- Source: "Quarterly Production of Garments (selected items) D.B.S.

Table 32

Note: Newfoundland is included as of 1949 in data for wood pulp and newsprint.

- ¹ Monthly totals are not equivalent to annual data which include Newfoundland (since 1949) and Yukon and North West Territories for which only annual statistics are collected.
- ² Total pulp production covers "Screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.
- ³ Monthly totals are not equivalent to annual data, due to differences in classification in the annual data and to the receipt of additional statistics which cannot be allocated by months.
- ⁴ Totals include unspecified pulp.
- ⁵ Customs exports.
- ⁶ Mill shipments destined for export.

Sources: Monthly Reports: "Production, Shipments and Stocks on Hand of Sawmills" D.B.S. "Trade of Canada" D.B.S. Bulletins of the Canadian Pulp and Paper Association and Newsprint Association of Canada. Annual Reports: "The Lumber Industry" and "The Pulp and Paper Industry" D.B.S.

Table 33A and 33B

Note: Effective January, 1957, the data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included. On this account, totals shown are not comparable with those of previous years.

- ¹ Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.
- ² Shipments for further processing within own firm and for sale in Canada.
- ³ As from 1950, includes some silvery pig iron formerly included with ferro alloys.
- ⁴ Excluding producers' interchange.
- ⁵ Monthly average.
- ⁶ Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.
- ⁷ Prior to 1946, imports include castings, forgings and rolling mill products. Since 1946 they include, in addition to all other shapes, wire and wire rope. Beginning January 1954 imports exclude castings, forgings, fittings and couplings. A substantial part of the imports appears after refinishing in total shipments.

Sources: Monthly Report: "Primary Iron and Steel", D.B.S. and Annual Report "The Primary Iron and Steel Industry" D.B.S.

Table 34

- ¹ Production plus imports less re-exports.
- ² As of April, 1949, Newfoundland is included.
- ³ Production figures for 1956 and 1957 differ slightly from the monthly averages due to additional statistics which cannot be allocated by months.

Sources: Monthly Reports: "Motor Vehicle Shipments", "New Motor Vehicle Sales and Motor Vehicle Financing", "Trade of Canada" D.B.S. Annual Report: "The Motor Vehicle Industry", D.B.S.

Table 35A

- ¹ Electric and other.
- ² Gas types are included as of 1952.
- ³ In some cases, these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month.
- ⁴ End of period.
- ⁵ Prior to 1952 data include apartment type machines. Later data do not include these machines.

Sources: Monthly Reports: "Domestic Electric Refrigerators", "Domestic Washing Machines", "Trade of Canada", D.B.S. Annual Report: "The Electrical Apparatus and Supplies Industry", D.B.S.

Table 35B

- ¹ Includes Lakehead area, (Port Arthur and Fort William) up to December 1956.
- ² Imports from U.S. only.

Sources: Monthly Reports: "Radio and Television Receiving Sets" and Trade of Canada, D.B.S.

CONSTRUCTION

Table 36

* Construction of dwelling units.

Note: These data are the result of a nation-wide survey, the field work for which is carried out by the Central Mortgage and Housing Corporation.

All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other centres of high building activity, are enumerated completely. The remainder of the country is covered on a sample basis.

Sources: Monthly Report: "New Residential Construction", D.B.S. Quarterly Report; "Canadian Housing Statistics", Central Mortgage and Housing Corporation.

Table 37

¹ Generally, the municipalities for which data are shown were selected as being leaders in the amount of permits issued during the period 1926-1946. Annual statistics for 58 municipalities are available historically in the Canada Year Book. All data down to 1949 represent building permits within the actual limits of these cities, as does the series giving the total for 58 municipalities throughout the period covered. Data for the individual cities for subsequent years and months cover approximately the metropolitan areas of the cities concerned according to the 1951 Decennial Census definitions except in the cases of Port Arthur, Fort William, Regina and Saskatoon, where the data still refer to the city proper. For the year 1949, both sets of data are given to maintain comparability.

² The coverage was extended to 507 municipalities in 1948, later to 821, and at the beginning of 1959 stood at 1,014. Minor revisions are still required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends on the statement of the applicant and considerable change may develop before the completion of the operation.

³ As of January 1950, Newfoundland is included.

Sources: "Canada Year Book", D.B.S. Monthly Report, "Building Permits", D.B.S.

Table 38

¹ Monthly totals are not equivalent to annual data prior to 1958, due to receipt of additional or more comprehensive statistics which cannot be allocated by months.

² Newfoundland included as of 1949 for clay products, as of 1950 for iron and steel products and as of 1952 for gypsum products.

³ Includes shingle type siding.

⁴ Hollow blocks including fireproofing and load bearing tile. Monthly data also include some floor tile.

⁵ Annual data from 1952 through 1957 represent factory shipments.

⁶ See Note 1, Table 32.

⁷ Includes planks and boards, flooring and square timber.

⁸ Monthly data for concrete bricks and blocks and monthly and annual data for cement pipe and tile cover production of firms which normally account for 85 per cent of the total Canadian output of concrete products.

⁹ Prior to 1946, annual data represent hardwall plaster only, while later figures include other gypsum plasters. Average monthly production of hardwall plaster only in 1947 (comparable to previous years) was 10,0 thousand tons.

¹⁰ For building insulation only.

¹¹ Prior to 1944 data represent factory sales.

¹² Since 1948 data includes concrete chimney blocks.

¹³ Annual data for concrete bricks and concrete blocks for 1952 through 1957 are factory shipments.

¹⁴ Monthly data represent sales of firms which normally account for 96 per cent of total production for Canada.

¹⁵ Data prior to 1952 represent value of production.

Sources: Monthly Reports: Rigid Insulating Board, Asphalt Roofing; Production, Shipments and Stocks on Hand of Sawmills; Iron Castings and Cast Iron Pipes and Fittings, Steel Wire and Specified Wire Products; Products Made From Canadian Clays; Gypsum Products; Mineral Wool; Cement and Cement Products; Paints, Varnishes and Lacquers; Trade of Canada (Imports) D.B.S. Annual Reports; The Roofing Paper Industry; The Lumber Industry; The Iron Castings Industry; The Clay and Clay Products Industry; The Gypsum Industry; The Concrete Products Industry; The Paints, Varnishes and Lacquers Industry; The Wire and Wire Goods Industry, D.B.S.

FOOD AND AGRICULTURE

Table 39

¹ Acreage and production data on all crops except wheat, sugar beets and tobacco are subject to intercensal revision for the years 1957 and 1958 inclusive.

² Harvested acreage.

Sources: "Handbook of Agricultural Statistics", D.B.S. and "Field Crops of Canada", D.B.S.

Table 40

¹ Does not include Supplementary Government Payments made under Prairie Farm Assistance Act, Prairie Farm Income Act and Wheat Acreage Reduction Act.

² Includes barley and barley participation payments, rye, flax, flax adjustment payments, corn, clover and grass seed, hay and clover.

³ Includes in addition sugar beets and fibre flax.

⁴ Includes wool, honey, maple products and miscellaneous farm products.

⁵ Quarterly figures from 1951 through 1954 have not been revised and are not strictly comparable with the annual averages for these years.

Source: Quarterly Report: "Farm Cash Income", D.B.S.

Table 41

¹ Includes imports of wheat and flour in terms of wheat.

² Figures of customs exports from 1945-46 to date are adjusted to reflect actual physical movements from Canada. Prior to 1945-46, adjusted figures are not available.

³ Prior to 1936-37, Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption.

⁴ From 1955-56 to date includes bagged seed wheat.

⁵ Includes imports of oats and oatmeal and rolled oats in terms of oats.

⁶ Includes customs exports of oatmeal and rolled oats in terms of oats.

⁷ Includes imports of barley, from 1926-27 includes malt and pot and pearl barley in terms of barley.

⁸ Includes customs exports of malt in terms of barley. Beginning January 1948 includes pot and pearl barley in terms of barley; for the crop year 1947-48 data available for January-July only.

Source: Annual Report: "Grain Trade of Canada", D.B.S.

Tables 42A and 42B

¹ Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1958 are final prices. Since August 1, 1958 only initial prices are available for wheat, oats and barley.

Table 42A and 42B—Concluded:

² Includes advance equalization payment on barley until March 1947 and subsidy on hogs from 1944 to date.

³ Based on price of hogs, including Dominion premium. A rise in ratio favours production of beef.

⁴ Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights.

⁵ Prior to 1941, prices were quoted on a live weight basis.

⁶ Prior to August 1939, Barley No. 1 feed was designated as Barley No. 3, C.W.

Sources: Weekly Report: "Live Stock and Meat Trade", Dept. of Agriculture. Monthly Reports: "Prices and Price Indexes"; "Price Index Numbers of Commodities and Services Used by Farmers"; "Cold Storage Holdings, Stocks of Meat and Lard"; "Cold Storage Holdings, Stocks of Dairy and Poultry Products", D.B.S. Quarterly Report: "Coarse Grains Quarterly"; D.B.S. Annual Report: "Stocks of Food Commodities in Cold Storage and Other Warehouses", D.B.S.

Table 42C

¹ Annual data are monthly averages of crop years ending July 31. Canadian Customs export data prior to crop year beginning August 1, 1936, subsequently, overseas clearances plus U.S. imports for domestic use. The latter are based on U.S. customs data prior to the crop year beginning August 1, 1949; subsequently, they are compiled from returns of Canadian elevator licensees and shippers and advice from American grain correspondents. From 1955-56 bagged seed wheat is included with wheat, adjusted to reflect actual physical movement from Canada.

² Beginning with crop year ending July 31, 1946, customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada.

³ Includes eggs for hatching.

Sources: Monthly Reports: "Wheat Review" and "Trade of Canada", D.B.S. Quarterly Report: "Coarse Grains Quarterly", D.B.S.

Table 43

¹ As at end of period.

² Milk equivalents of cottage cheese and factory cheese other than cheddar, though not included in the monthly figures, are included in the monthly averages.

³ Includes butter and cheese, imported and "In Transit".

⁴ Includes "Evaporated whole milk in hands of wholesalers" up to December 1956. For 1957 and 1958 this item was no longer available, and is consequently excluded.

Sources: Monthly Reports: "Dairy Factory Production", "Dairy Review", "Cold Storage Holdings of Dairy Products", D.B.S. Annual Report: "Dairy Statistics", D.B.S.

FOOD AND AGRICULTURE—Concluded

Table 44

- ¹ Data for Newfoundland are included as of 1953.
² Monthly totals for 1956 through 1958 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.
³ As of April 1949 Newfoundland is included.
⁴ Does not include meal, offal, baits, livers, tongues or roe.
⁵ As of April 1949 Newfoundland is included.

Sources: Monthly Reports: "Review of Canadian Fisheries Statistics"; "Trade of Canada", D.B.S. Annual Report: "Fisheries Statistics of Canada", D.B.S.

Table 45

- ¹ Beginning August 1945, customs exports are adjusted to reflect actual physical movement of wheat flour from Canada.
² Includes Newfoundland.

Table 45—Concluded:

- ³ Includes stocks held by manufacturers, wholesalers and other warehouses.
⁴ Includes cereals.
⁵ Includes lima beans from 1948.
⁶ All annual data include chili sauce. Earlier quarterly data also include chili sauce: quarterly data for 1954 and later years do not. Data for 1956 and subsequent years include tomato sauce, sauces for meat and fish and sauces, other.
⁷ Includes beef stews and boiled dinners.
⁸ Newfoundland included as of 1949. In certain cases quarterly data are not equivalent to annual figures due to the receipt of additional statistics which have not yet been allocated by quarters.

Sources: Monthly Reports: "Grain Milling Statistics"; "Margarine Statistics"; "The Sugar Situation"; "Monthly Production of Carbonated Beverages", D.B.S. "Quarterly Report on Processed Foods", D.B.S.

DOMESTIC TRADE

Table 46

Note: Newfoundland is included as from 1949.

- ¹ Total value of sales by retail outlets, including "Tobacco" and "All Other Trades".
² Not available prior to 1954.
³ Includes "Men's Clothing", "Family Clothing" and "Women's Clothing".

Sources: Reference Paper No. 56: "Retail Trade 1930-1951", D.B.S. Monthly Report: "Retail Trade", D.B.S.

Table 47

- ¹ Department store stocks at end of period at selling value.
² Chain store stocks at end of period at cost value.
³ Sales and stocks by departments prior to 1951 have not been revised in accordance with the 1951 census benchmarks. Such a revision would, however, change these figures very slightly.

Sources: Monthly Reports: "Department Store Sales and Stocks" and "Chain Store Sales and Stocks" D.B.S. Annual Report: "Retail Chain Stores", D.B.S.

Table 48A

Note: From 1951 the quarterly and annual data in this table have been revised, using 1951 Census benchmarks as the computational base. The average for 1951 is given on both the revised and unrevised footing. Annual data prior to 1951 are on the unrevised basis.

- ¹ Accounts receivable as at end of period.

Sources: Quarterly Report: "Retail Credit", D.B.S. "Retail Consumer Credit, Annual Summary, 1941" and "1948-1950", D.B.S.

Table 48B

- * Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available.

Table 48B—Concluded:

- ¹ Conditional sale agreements held in connection with the financing of retail purchases of consumer goods.
² Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments.
³ Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only.
⁴ In addition to the items shown here, quarterly figures are available on the use of oil companies credit cards from December 1955 on. Balances were as follows:

Million dollars

December	1955-20	September	1957-34
March	1956-19	December	1957-32
June	1956-23	March	1958-29
September	1956-28	June	1958-31
December	1956-26	September	1958-39
March	1957-24	December	1958-35
June	1957-28		

- ⁵ Includes loans fully secured by marketable stocks and bonds, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds.
⁶ Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

Source: Monthly Report: "Statistical Summary", Bank of Canada.

Table 49

Note: The indexes prior to 1951 do not include Newfoundland. The sample on which they were based was substantially although not exactly comparable to the later sample upon which the dollar sales estimates since 1951 are based. The indexes are therefore being shown to give a general impression of the trend.

- ¹ Data covers wholesalers proper only, i.e. those wholesalers buying and selling on their own account, taking title to the goods and generally performing the functions of warehousing and delivering.

Sources: Monthly Report: "Wholesale Trade", D.B.S. Report "Wholesale Trade September and October 1955, Annual 1951-1954", D.B.S.

EXTERNAL TRADE

Table 50

Note: Commencing with April, 1949, the Trade of Canada includes that of Newfoundland.

- ¹ Does not include re-exports.
² These price and volume indexes are considered reasonably accurate for the periods 1926-40 and 1946-58. They are not given for the period 1941-45 since their validity is dubious. The composition of Canada's Trade was sharply different from its peacetime pattern in these years, and since no reliable price indicators could be obtained for the bulk of the war materials recorded in the trade statistics, the price indexes could not be adapted to reflect this change in the composition of trade.
³ Includes pigs, ingots, blooms and billets, castings and forgings, and rolling mill products.

Source: Monthly Report: "Trade of Canada", D.B.S.

Table 51

Note: As of April, 1949, the Trade of Canada includes that of Newfoundland.

- ¹ These price and volume indexes are considered reasonably accurate for the periods 1926-40 and 1946-58. They are not given for

Table 51—Concluded:

the period 1941-45 because their validity is dubious. The composition of Canada's Trade was sharply different from its peacetime pattern in these years, and since no reliable price indicators could be obtained for the bulk of the war materials recorded in the trade statistics, the price indexes could not be adapted to reflect this change in the composition of trade.

- ² Includes pigs, ingots, blooms and billets, castings and forgings, ferro alloys and rolling mill products.

Source: Monthly Report: "Trade of Canada", D.B.S.

Table 52

Note: Prior to 1950, Ireland is included with Commonwealth countries, but has since been shown with "Other" European countries.

- ¹ Export columns do not include re-exports, except for column 2.
² Since January 1958 includes Alaska, formerly included with Rest of the World (Others).
³ Belgium, Luxembourg and the Netherlands.

Source: Monthly Report: "Trade of Canada", D.B.S.

INTERNATIONAL TRADE — Concluded

Table 53

¹ Official holdings of gold and U.S. dollars are given as of end of year or quarter.
² The trade figures have been adjusted to conform to balance of payments definitions of the international exchange of commodities. Non-commercial items are deducted from trade statistics, as are items such as purchases by tourists which are entered elsewhere in the current account. An important adjustment during the war and again since 1950 arises from the abnormal movements of commodities on government account; payments data were substituted for the physical movement of commodities in order, among other things, to reflect more closely the proper timing and valuation of these transactions.
³ Balance also reflects all other current transactions with the exception of wartime grants and mutual aid which are included in current receipts but excluded from current payments as follows:

Table 53 — Concluded

Billion dollars

1942 — 1,002	1945 — 358
1943 — 518	1946 — 97
1944 — 960	

⁴ Net transfers for foreign direct investment in Canadian enterprises, from 1927 to 1939 also includes Canadian direct investment abroad.

⁵ Net sales (+) or purchases (—) by Canadians of Canadian and foreign securities (trading, new issues and retirements including official wartime repatriation).

Sources: "Annual and quarterly estimates of the Canadian Balance of International Payments", D.B.S. "Statistical Summary" — Bank of Canada.

TRANSPORTATION

Table 54

Note: Monthly figures are not necessarily equivalent to annual data due to the receipt of additional statistics which cannot be allocated by months.

¹ Prior to 1941 statistics are for shipping years ending March 31. Since January 1957, cargo loaded and unloaded by tugs is included in the total.

² Since 1941, data include Great Lakes shipping between United States and Canadian inland ports.

³ Prior to 1957, cargo handled at Montreal includes cargo handled at port of Contrecoeur. Since that date, such cargo is excluded.

⁴ Coinciding with 1957 coastwise shipping includes cargo unloaded at non-customs ports.

⁵ Annual data are averages of nine months.

⁶ Includes Canadian territorial operations of foreign carriers.

As from 1947, Civil Aviation data have been revised to include C.P.A. and T.C.A. overseas services, and, in the case of revenue ton miles, to exclude goods ton miles of charter and contract services. These data which represent unit toll traffic are therefore not strictly comparable with those for earlier years.

Revenue ton miles include "express" ton miles and "excess baggage" ton miles for all years prior to 1956. These categories are excluded for 1956 and subsequent years. The annual average for 1956, including these categories, would be 1,839 thousand ton miles.

Sources: Monthly Reports: "Civil Aviation", D.B.S. "Canal Statistics", D.B.S. Shipping Statistics, D.B.S. Annual Reports: "Civil Aviation", "Shipping", "Canal Statistics", D.B.S.

Table 55

Note: Based on weekly carloadings reported by Class I and Class II railways. Throughout the period, there has been a steady gradual increase in the average capacity of the freight cars owned by the major Canadian railways, as is shown in the attached table.

Average Capacity Per Freight Car
(Tons)

1925 — 36.81	1937 — 41.76	1948 — 45.00
1927 — 37.05	1938 — 41.84	1949 — 45.34
1928 — 37.26	1939 — 42.48	1950 — 45.56
1929 — 38.16	1940 — 42.81	1951 — 45.96
1930 — 39.27	1941 — 42.35	1952 — 46.82
1931 — 39.55	1942 — 43.18	1953 — 47.53
1932 — 39.70	1943 — 43.42	1954 — 48.09
1933 — 40.02	1944 — 43.64	1955 — 48.56
1934 — 40.17	1945 — 43.91	1956 — 49.64
1935 — 41.05	1946 — 44.04	1957 — 50.26
1936 — 41.40	1947 — 44.39	1958 — 50.78

¹ As of September, 1952 includes other packing house products (non-edible) formerly included with livestock, meats and packing house products.

² Does not agree with sum of items due to revisions which cannot be allocated.

Source: Weekly Report: "Carloadings", D.B.S.

Table 56

Note: Newfoundland is included as of 1949.

¹ On the first page of this table, the annual statistics down to 1955 (on the former accounting basis) include all railways with annual operating revenues of \$500,000 and over. Data for 1955 (on the altered basis) and for subsequent years, refer to all Class I and Class II, railways, which are in fact also defined as railways with annual operating revenues of \$500,000 and over. Monthly averages for 1956, 1957 and 1958 differ from the sum of the monthly data due to revisions which cannot be allocated by months.

² As of January 1955, the Canadian Pacific, Canadian National and Quebec North Shore and Labrador railways adopted the "Uniform Classification of Accounts for Common Carriers by Railway" and the Pacific Great Eastern Railway later put its accounts for 1955 and 1956 on this basis. Through 1956 the other railways remained on the previous accounting system. The first 1955 averages for columns 1 to 5, therefore show all included railways using the old accounting system, and the second 1955 averages and the 1956 averages show the above four railways reporting revenues and expenditures according to the "Uniform Classification of Accounts" and the remainder reporting according to the previous system. This also applies to the 1956 monthly totals. Beginning in January 1957 all included railways followed the uniform classification of accounts.

³ Under the old accounting system, operating income equalled operating revenue less operating expenses adjusted for tax accruals and rent of equipment and joint facilities. Under the "Uniform Classification of Accounts", operating income equals operating revenue less operating expenses. It follows that under the procedure used for 1955 and 1956, when the returns for the two groups of railways on the two systems had to be added together, operating income was still somewhat less than operating revenues less operating expenses.

⁴ The monthly averages down to 1955 on the old accounting basis, both for "All Railways" revenues and for C.P. and C.N. revenues, include all water line revenues in the total revenue column, and also water line freight and water line passenger revenues in the appropriate columns. Under the new "Uniform Classification", water line revenues are excluded altogether from "railway operating" revenues. It follows that, for 1955 (revised basis) and 1956, total revenues include water line revenues for those railways which remained on the old accounting basis only. To give a general idea of the amounts involved, in 1954 "water line" revenues (all railways) were \$5,838,000. In 1955, the water line revenues of "other" railways not yet on the "Uniform Classification" totalled \$2,495,000. For 1957 and 1958, water line revenues are excluded from operating revenues for all railways.

⁵ As of January, 1958, statistics include the British Columbia Electric Railway.

⁶ As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system.

Sources: Monthly Report: "Railway Operating Statistics", D.B.S. Annual Reports: "Railway Transport", D.B.S. and "Railway Operating Statistics" D.B.S.

FINANCE

Table 57

¹ Foreign exchange and foreign securities. Includes gold for following year-ends.

Million dollars

1935 — 189.5
1936 — 174.4
1937 — 179.7
1938 — 135.9
1939 — 225.7

² Industrial Development Bank capital stock, bonds and debentures.

Table 57 — Concluded

¹ Bank premises and all other assets.

² Capital trust fund and all other liabilities.

³ On December 31, 1955 the basis for the valuation of securities held by the Bank of Canada was changed from "not exceeding market values" to amortized values, and for this reason figures following December 31, 1956 are not comparable with those for earlier dates.

Sources: "Statistical Summary — Bank of Canada", Bank of Canada Monthly Statement of Assets and Liabilities.

FINANCE—Concluded

Table 58

Note: The classification of chartered bank assets and liabilities was revised by the Bank Act of 1954. Figures as from the end of July 1954 are on the new basis and adjustments have been made to put figures for earlier dates on a comparable basis. Statistics of Newfoundland branches are included as Canadian from April, 1949.

- ¹ Total cash reserves include Bank of Canada deposits and Bank of Canada notes. Prior to July, 1954, all figures in this section are daily averages. From July, 1954, Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the four consecutive Wednesdays ending with the second last Wednesday in the previous month.
- ² From July 1954 the figures are not adjusted for items in transit and are not strictly comparable with the figures in this section for earlier periods.
- ³ Prior to July 1, 1954, the statutory minimum requirement was 5 per cent for each day; since that date it has been a monthly average of 8 per cent calculated as described in footnote 1.
- ⁴ The September 30, 1957 and subsequent figures for "personal savings deposits" exclude, and the figures for "other notice deposits" include, the amount of \$140 million, being the deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes, which were reclassified at that time in the returns of the banks to the Department of Finance.
- ⁵ Mainly deposits of foreign banks.
- ⁶ Capital, rest fund and undivided profits as at the latest fiscal year-end.
- ⁷ Beginning January 31, 1957, month-end figures for chartered bank holdings of Government of Canada and provincial government securities are based on "amortized value" and are therefore not directly comparable with figures for preceding month-ends, which are based on "not exceeding market value".
- ⁸ Including issues payable in foreign currency. Accrued interest also included.
- ⁹ Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans.
- ¹⁰ Includes securities guaranteed by provincial governments.
- ¹¹ Excluding Canadian day to day loans.
- ¹² Loans to grain dealers and exporters.
- ¹³ Loans to finance the purchase of Canada Savings Bonds at time of issue.
- ¹⁴ Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities.
- ¹⁵ Includes customers' liability under acceptances, guarantees and letters of credit, bank premises, shares of and loans to controlled corporations, gold and coin in Canada, Canadian dollar deposits with other banks and other assets.
- ¹⁶ Figures for September 30th, 1955 and subsequent dates have been revised and are not directly comparable with those for earlier dates owing to a change in the classification of foreign currency loans in the returns of the banks to the Department of Finance. Foreign currency loans on the books of Canadian branches, some of which are made to Canadian customers and some to foreign customers, were previously included in, but have now been excluded from, loans in Canadian currency.
- ¹⁷ Beginning January 31, 1957, figures for certain chartered bank asset items are not strictly comparable with those for earlier dates, owing to the re-allocation of inner reserves consequent upon the securities valuation change referred to in footnote 7.

Sources: Statistical Summary—Bank of Canada, Financial Supplement to Statistical Summary, Bank of Canada.

Table 59

- ¹ Note circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks.
- ² Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada.
- ³ Less total float, i.e. cheques and other items in transit (net).
- ⁴ At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about \$140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date.

Source: Statistical Summary, Bank of Canada, Financial Supplement, Bank of Canada.

Table 61

Note: This series covers 35 clearing house centres. Additional data covering 52 centres are published in the monthly report, "Cheques Cashied in Clearing Centres".

- ¹ Commencing with April, 1949, Newfoundland is included.

Sources: Annual and Monthly Reports: "Cheques Cashied in Clearing Centres", D.S.S. and Canadian Bankers' Association.

Table 62A

Note: This series gives new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

The Canada totals by months for 1957 and 1958 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces by months. Canada annual averages for all years except 1958 correspond to the sum of the provincial averages. The provincial annual figures for 1957 therefore do not correspond exactly to the sums of the monthly totals.

Canada totals throughout are believed to be consistent although the 1957 and 1958 data are still preliminary.

Source: Monthly Survey of Life Insurance Sales in Canada", Life Insurance Agency Management Association, Hartford, Conn.

Table 62B

- ¹ Ordinary, Industrial and Group.

² Part of the apparent increase between 1957 and 1953 is due to a change in the inflation factors used to bring figures of reporting firms up to the estimated total level for all insurance companies.

Sources: "Quarterly Report of Death Claims by Provinces" and "Monthly Report of Benefit Payments", The Canadian Life Insurance Officers Association.

Table 64

Note: The number of stocks has varied over the period, the totals shown representing the current coverage.

Source: Monthly Report: "Prices and Price Indexes", D.B.S.

Table 65

Note: For the years before 1944, the estimates are based on a special study made by the Department of National Revenue. Annual data for the years 1944 to 1956 are based on the Department of National Revenue publication "Taxation Statistics". Quarterly data based on a sample survey of all companies incorporated in Canada except government-owned companies are used to allocate the annual figures by quarters and to project these quarterly totals to 1957 and 1958.

The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges and charitable donations are added back to net profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses.

- ¹ Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction.
- ² Includes, in addition to the industries listed, Tobacco, Rubber, Leather, Non-Metallic Minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.
- ³ Includes Printing and Publishing and Allied Industries.

Sources: Quarterly Corporation Profits, D.B.S. "National Accounts, Income and Expenditure, 1926-1956", D.B.S.

Table 66

Note: Data refer to assignments made under the Bankruptcy and Winding Up Acts only. The figures given in the upper section of the table, down to 1955, include all failures reported under the above acts. The lower section, including the past four years and all monthly data, excludes the failures of individuals who did not operate businesses as such. The year 1955 is given on both bases. The amount of liabilities by industry on the former basis is not available.

- ¹ In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons, making proposals are not available.

Source: Commercial Failures Under the Provisions of the Bankruptcy and Winding Up Acts, D.B.S.

Table 67

- ¹ As reported by Financial Post.
- ² Annual data obtained by averaging monthly ratios.
- ³ As at end of month. Annual data are end of month averages.
